

Stainless Steel Fire Clip

The Stainless Steel Fire Clip (SSFC2516) from HellermannTyton provides a fire resistant cable fixing that is designed for use within mini trunking.

Following changes to the IET Wiring Regulations in July 2015 (*BS7671 – 3rd Amendment, 7th edition*), wiring systems in escape routes must now be supported in such a way that they will not prematurely collapse in the event of a fire. This means that non-metallic trunking, conduit, cable ties and cable clips can no longer be used as the sole means of support in areas that are escape routes from a building.

The SSFC2516 metal fire clip provides a quick and easy-to-install fire resistant fixing for 25mm x 16mm mini trunking. It ensures that any new installation will comply with industry regulations whilst increasing the safety of firefighters and the public in the event of a fire.

Quick & Easy to Install:

Step 1

Push the clip into the trunking

Step 2

Secure with a masonry fixing, before feeding in the cables

Step 3

Bend over the wings to secure the cables, then fit the lid to the trunking

Features & Benefits:

- Suitable for 25 x 16mm mini trunking
- Easy to apply without the need for a tool - completely invisible once mounted within trunking
- Secures cables even in the event of a fire
- Manufactured in Stainless Steel 430 material providing good resistance to heat and corrosion
- The safest way of holding cables within mini trunking
