

# Low Duty LCD Segment Driver for Automotive application

BU91520KV-M

MAX 276 Segments (69SEG × 4COM)

#### **General Description**

The BU91520AKV-M is 1/4 or 1/3-Duty general-purpose LCD driver that can be used for automotive applications. It can support operating temperature of up to +105°C and qualified for AEC-Q100 Grade2, as required for automotive applications..

It can drive up to 276 LCD Segments directly. It can control up to 6 general-purpose output ports. It can also support a key scan function that detects a maximum of 30 key inputs.

#### **Features**

- AEC-Q100 Qualified (Note1)
- Key input function for up to 30 keys (A key scan is performed only when a key is pressed.)
- Either 1/4 or 1/3-Duty can be selected with the serial control data.

1/4 duty drive: Up to 276 segments 1/3 duty drive: Up to 207 segments

- Serial Data Control of frame frequency for common and segment output waveforms.
- Serial data control of switching between the segment output port, PWM output port and general-purpose output port functions.(Max 6 ports)
- Built-in OSC circuit
- The INHb pin can force the display to the off state
- Integrated Power-on Reset Circuit
- No external component
- Low power consumption design
- Supports Line and Frame Inversion Grade 2

#### **Applications**

 Car Audio, Home Electrical Appliance, Meter Equipment etc.

#### **Typical Application Circuit**

# Supply Voltage Range: +2.7V to +6.0V Operating Temperature Range: -40°C to +105°C Max Segments: 276 Segments Display Duty 1/3, 1/4 Selectable Bias: 1/2, 1/3 Selectable Interface: 3wire Serial Interface

#### **Special Characteristics**

Key Specifications

■ Electrostatic Discharge Voltage(HBM): ±2000V ■ Latch-up Current: ±100mA

#### **Package**

VQFP80 W (Typ.) x D (Typ.) x H (Max.)

14.00mm x 14.00mm x 1.60mm

(Note2) Insert capacitors between VDD and VSS C > 0.1uF.

#### **Pin Configuration**

Figure 3. Pin Configuration (TOP VIEW)

Absolute Maximum Ratings (Ta = 25°C, VSS = 0V)

Parameter	Symbol	Conditions	Rating	Unit
Maximum Supply Voltage	VDD max	VDD	-0.3 to +7.0	V
Input Voltage	VIN1	SCE, SCL, SDI, INHb	-0.3 to +7.0	V
	VIN2	KI1 to KI5	-0.3 to +7.0	V
Allowable Loss	Pd		1.20 <sup>(Note3)</sup>	W
Operating Temperature	Topr		-40 to +105	Ŝ
Storage Temperature	Tstg		-55 to +125	°C

(Note3) Derate by 12.0mW/°C when operating above Ta=25°C (when mounted in ROHM's standard board).

Caution: Operating the IC over the absolute maximum ratings may damage the IC. The damage can either be a short circuit between pins or an open circuit between pins and the internal circuitry. Therefore, it is important to consider circuit protection measures, such as adding a fuse, in case the IC is operated over the

Recommended Operating Conditions (Ta = -40°C to +105°C, VSS = 0V)

#### **Control Data Functions**

1. KM0 to KM2: Key Scan output port/Segment output port control data

These control data bits switch the functions of the KS1/S56 to KS6/S61 output pins between key scan output and segment output.

KM0	KM1	KM2			Output F	Maximum Number	Reset			
KIVIU	KIVI I	KIVIZ	KS1/S56	KS2/S57	KS3/S58	KS4/S59	KS5/S60	KS6/S61	of Input keys	condition
0	0	0	KS1	KS2	KS3	KS4	KS5	KS6	30	
0	0	1	S56	KS2	KS3	KS4	KS5	KS6	25	
0	1	0	S56	S57	KS3	KS4	KS5	KS6	20	
0	1	1	S56	S57	S58	KS4	KS5	KS6	15	
1	0	0	S56	S57	S58	S59	KS5	KS6	10	
1	0	1	S56	S57	S58	S59	S60	KS6	5	
1	1	0	S56	S57	S58	S59	S60	S61	0	
1	1	1	S56	S57	S58	S59	S60	S61	0	0

#### 2. P0 to P2: Segment / PWM / General Purpose output port control data

These control bits are used to select the function of the S1/P1 to S6/P6 output pins (Segment Output Pins or PWM Output

Pins or General Purpose Output Pins).

P0	P1	P2	S1/P1/G1	S2/P2/G2	S3/P3/G3	S4/P4/G4	S5/P5/G5	S6/P6/G6	Reset condition
0	0	0	S1	S2	S3	S4	S5	S6	
0	0	1	P1/G1	S2	S3	S4	S5	S6	
0	1	0	P1/G1	P2/G2	S3	S4	S5	S6	
0	1	1	P1/G1	P2/G2	P3/G3	S4	S5	S6	
1	0	0	P1/G1	P2/G2	P3/G3	P4/G4	S5	S6	
1	0	1	P1/G1	P2/G2	P3/G3	P4/G4	P5/G5	S6	
1	1	0	P1/G1	P2/G2	P3/G3	P4/G4	P5/G5	P6/G6	
1	1	1	S1	S2	S3	S4	S5	S6	0

PWM output or General Purpose output is selected by PGx (x=1 to 6) control data bit.

When the General Purpose Output Port Function is selected, the correspondence between the output pins and the

respective display data is given in the table below.

Output Pins	Corresponding Display Data				
Output Fills	1/4-Duty mode	1/3-Duty mode			
S1/P1/G1	D1	D1			
S2/P2/G2	D5	D4			
S3/P3/G3	D9	D7			
S4/P4/G4	D13	D10			
S5/P5/G5	D17	D13			
S6/P6/G6	D21	D16			

When the General Purpose Output Port Function is selected, the respective output pin outputs a "HIGH" level when its corresponding display data is set to "1". Likewise, it will output a "LOW" level, if its corresponding display data is set to "0". For example, S4/P4/G4 is used as a General Purpose Output Port in case of 1/4-Duty, if its corresponding display data – D13 is set to "1", then S4/P4/G4 will output "HIGH" level. Likewise, if D13 is set to "0", then S4/P4/G4 will output "LOW" level.

#### 3. DR: 1/3-Bias drive or 1/2-Bias drive control data

This control data bit selects either 1/3-Bias drive or 1/2-Bias drive.

DR	Bias Drive Scheme	Reset condition
0	1/3-Bias drive	0
1	1/2-Bias drive	

#### 4. FL: Line Inversion or Frame Inversion control data

This control data but selects either Line Inversion or Frame Inversion.

FL	Inversion Setting	Reset condition
0	Line	0
1	Frame	

Typically, when driving large capacitance LCD, Line inversion will increase the influence of crosstalk. Regarding driving waveform, refer to LCD driving waveform.

5. DT: 1/4-Duty drive or 1/3-Duty drive control data

This control data bit selects either 1/4-Duty drive or 1/3-Duty drive.

DT	Duty Drive Scheme	Reset condition
0	1/4-Duty drive	0
1	1/3-Duty drive	

6. FC0, FC1, FC2: Common/segment output waveform frame frequency control data

These control data bits set the frame frequency for common and segment output waveforms.

FC0	FC1	FC2	Frame Frequency fo(Hz)	Reset condition
0	0	0	fosc <sup>(Note10)</sup> /12288	0
0	0	1	fosc/10752	
0	1	0	fosc/9216	
0	1	1	fosc/7680	
1	0	0	fosc/6144	
1	0	1	fosc/4608	
1	1	0	fosc/3840	
1	1	1	fosc/3072	

(Note10) fosc: Internal oscillation frequency (600 [kHz] typ.)

7. OC: Internal oscillator operating mode/External clock operating mode control data

This control data bit selects the oscillation mode.

OC	Operating Mode	In/Out Pin(S69/OSC) Status	Reset condition
0	Internal oscillator	S69 (segment output)	0
1	External Clock	OSC (clock input)	

8. SC: Segment on/off control data

This control data bit controls the on/off state of the segments.

SC	Display State	Reset condition
0	On	
1	Off	0

Note that when the segments are turned off by setting SC to "1", the segments are turned off by outputting segment off waveforms from the segment output pins.

9. BU: Normal mode/power-saving mode control data

This control data bit selects either normal mode or power-saving mode.

BU0	BU1	BU2	Mode	OSC Oscillator	Segment outputs	Outpu	t Pin Sta	ates Dur	ing Key	Scan St	andby	Reset
БОО	БОТ	502	Mode	OSC Oscillator	Common outputs	KS1	KS2	KS3	KS4	KS5	KS6	condition
0	0	0	Normal	Operating	Operating	Н	Н	Н	Н	Н	Н	
0	0	1				١	L	L	L	L	Ι	
0	1	0				L	L	L	L	Τ	Η	
0	1	1	D			L	L	L	Н	Н	Н	
1	0	0	Power-	Stopped	Low(VSS)	١	L	Н	Н	Н	Ι	
1	0	1	saving			L	Н	Н	Н	Τ	Η	
1	1	0				Η	Н	Н	Н	Н	Ι	
1	1	1				Н	Н	Н	Н	Н	Н	0

Power-saving mode status:

S1/P1/G1 to S6/P6/G6 = active only General Purpose output

S7 to S69 = low(VSS)

COM1 to COM4 = low(VSS)

Stop the LCD drive bias voltage generation circuit

Stop the Internal oscillation circuit

However, serial data transfer is possible during Power-saving mode.

10. PG1, PG2, PG3, PG4, PG5, PG6: PWM/General Purpose output control data

This control data bit select either PWM output or General Purpose output of Sx/Px/Gx pins (x=1 to 6)

PGx(x=1 to 6)	Mode	Reset condition
0	PWM output	0
1	General Purpose output	

#### <PWM<->GPO Changing function>

Normal behavior of changing GPO to PWM is below.

- PWM operation is started by command import timing of DD: 01 during GPO -→ PWM change.
- Please take care of reflect timing of new duty setting of DD: 10 and DD: 11 is from the next PWM.

In order to avoid this operation, please input commands in reverse as below.

### 11. PF0, PF1, PF2, PF3: PWM output waveform frame frequency control data

These control data bits set the frame frequency for PWM output waveforms

PF0	PF1	PF2	PF3	PWM output Frame Frequency fp(Hz)	Reset condition
0	0	0	0	fosc/4096	0
0	0	0	1	fosc/3840	
0	0	1	0	fosc/3584	
0	0	1	1	fosc/3328	
0	1	0	0	fosc/3072	
0	1	0	1	fosc/2816	
0	1	1	0	fosc/2560	
0	1	1	1	fosc/2304	
1	0	0	0	fosc/2048	
1	0	0	1	fosc/1792	
1	0	1	0	fosc/1536	
1	0	1	1	fosc/1280	
1	1	0	0	fosc/1024	
1	1	0	1	fosc/768	
1	1	1	0	fosc/512	
1	1	1	1	fosc/256	

12. W10 to W17<sup>(Note11)</sup>, W20 to W27, W30 to W37, W40 to W47, W50 to W57, W60 to W67: PWM output waveform duty control data.

These control data bits set the high level pulse width(duty) for PWM output waveforms.

N = 1 to 6. Tp = 1/fp

									1 to 6, Tp = 1
Wn0	Wn1	Wn2	Wn3	Wn4	Wn5	Wn6	Wn7	PWM Duty	Reset condition

 $(Note 13)\ The\ Segment\ Output\ Port\ function\ is\ assumed\ to\ be\ selected\ for\ the\ output\ pins-S1/P1/G1\ to\ S6/P6/G6.$ 

To illustrate further, the states of the S21 output pin is given in the table below.

Display Data			State of S21 Output Pin	
D61	D62	D63	State of 321 Output Fill	
0	0	0	LCD Segments corresponding to COM1, COM2 and COM3 are OFF.	
0	0	1	LCD Segment corresponding to COM3 is ON.	
0	1	0	LCD Segment corresponding to COM2 is ON.	
0	1	1	LCD Segments corresponding to COM2 and COM3 are ON.	
1	0	0	LCD Segment corresponding to COM1 is ON.	
1	0	1	LCD Segments corresponding to COM1 and COM3 are ON.	
1	1	0	LCD Segments corresponding to COM1 and COM2 are ON.	
1	1	1	LCD Segments corresponding to COM1, COM2 and COM3 are ON.	

#### **Serial Data Output**

1. When SCL is stopped at the low level<sup>(Note14)</sup>

- (Note14) 1. X=Don't care
- 2. B0 to B3, A0 to A3: Serial Interface address

# 2. When SCL is stopped at the high level $\ensuremath{^{\text{(Note15)}}}$

Figure 12. Serial Data Output Format

- (Note15)
  1. X=Don't care
  2. B0 to B3, A0 to A3: Serial Interface address
- 3. Serial Interface address: 43H
- 4. KD1 to KD30: Key data
- 5. PA: Power-saving acknowledge data
- 6. If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and Power-saving acknowledge data (PA) will be invalid.

#### **Output Data**

#### 1. KD1 to KD30: KEY DATA

When a key matrix of up to 30 keys is formed from the KS1 to KS6 output pins and the KI1 to KI5 input pins and one of those keys is pressed, the key output data corresponding to that key will be set to 1. The table shows the relationship between those pins and the key data bits.

Item	KI1	KI2	KI3	KI4	KI5
KS1	KD1	KD2	KD3	KD4	KD5
KS2	KD6	KD7	KD8	KD9	KD10
KS3	KD11	KD12	KD13	KD14	KD15
KS4	KD16	KD17	KD18	KD19	KD20
KS5	KD21	KD22	KD23	KD24	KD25
KS6	KD26	KD27	KD28	KD29	KD30

#### 2. PA: Power-saving Acknowledge Data

This output data is set to the state when the key was pressed. In that case SDO will go to the low level. If serial data is input during this period and the mode is set (normal mode or power-saving mode), the IC will be set to that mode. PA is set to 1 in the power-saving mode and to 0 in the normal mode.

#### **Power-saving Mode**

Power-saving mode is activated by setting at least one of control data BU0 or BU1 or BU2 set to 1. The segment outputs will all go low and the common outputs will also go low, and the oscillator on the OSC pin will stop (it will be started by a key press). This reduces power dissipation. This mode is cleared by sending control data with all the BU0 or BU1 or BU2 set to 0. However, note that the S1/P1/G1 to S6/P6/G6 outputs can be used as general-purpose output ports according to the state of the P0 to P2 control data bits, even in power-saving mode. (See the control data description for details.)

#### **Key Scan Operation Function**

#### 1. Key Scan Timing

The key scan period is 4608T(s). To reliably determine the on/off state of the keys, the BU91520KV-M scans the keys twice and determines that a key has been pressed when the key data agrees. It outputs a key data read request (a low level on SDO) 9840T(s) after starting a key scan. If the key data does not agree and a key was pressed at that point, it scans the keys again. Thus the BU91520KV-M cannot detect a key press shorter than 9840T(s).

Figure 13. Key Scan Timing (Note16)

(Note16) In power-saving mode the high/low state of these pins is determined by the BU0 to BU2 bits in the control data. Key scan output signals are not output from pins that are set "L".

#### 2. In Normal Mode

The pins KS1 to KS6 are set "H".

When a key is pressed a key scan is started and the keys are scanned until all keys are released. Multiple key presses are recognized by determining whether multiple key data bits are set.

If a key is pressed for longer than 9840T(s) (Where T=1/fosc) the BU91520KV-M outputs a key data read request (a low level on SDO) to the controller. The controller acknowledges this request and reads the key data. However, if SCE is high during a serial data transfer, SDO will be set "H".

After the controller reads the key data, the key data read request is cleared (SDO is set high) and the BU91520KV-M performs another key scan. Also note that SDO, being an open-drain output, requires a pull-up resistor (between 1 K $\Omega$  and 10K $\Omega$ ).

Figure 14. Key Scan Operation In Normal Mode

#### 3. In Power-saving Mode

The pins KS1 to KS6 are set to high or low by the BU0 to BU2 bits in the control data. (See the control data description for details.)

If a key on one of the lines corresponding to a KS1 to KS6 pin which is set high is pressed, the oscillator on the OSC pin is started and a key scan is performed. Keys are scanned until all keys are released. Multiple key presses are recognized by determining whether multiple key data bits are set.

If a key is pressed for longer than 9840T(s)(Where T=1/fosc) the BU91520KV-M outputs a key data read request (a low level on SDO) to the controller. The controller acknowledges this request and reads the key data. However, if SCE is high during a serial data transfer, SDO will be set high.

After the controller reads the key data, the key data read request is cleared (SDO is set high) and the BU91520KV-M performs another key scan. However, this does not clear power-saving mode. Also note that SDO, being an open-drain output, requires a pull-up resistor (between 1 and  $10K\Omega$ ).

Power-saving mode key scan example

Example: BU0=0, BU1=0, BU2=1 (only KS6 high level output)

(Note17)

These diodes are required to reliable recognize multiple key presses on the KS6 line when only KS6 is high, as in the above example. That is, these diodes prevent incorrect operations due to sneak currents in the KS6 key scan output signal when keys on the KS1 to KS5 lines are pressed at the same time.

Figure 15. Key Scan Operation In Power-saving Mode

#### **Multiple Key Press**

Although the BU91520KV-M is capable of key scanning without inserting diodes for dual key presses, triple key presses on the KI1 to KI5 input pin lines, or multiple key presses on the KS1 to KS6 output pin lines, multiple presses other than these cases may result in keys that were not pressed recognized as having been pressed. Therefore, a diode must be inserted in series with each key. Applications that do not recognize multiple key presses of three or more keys should check the key data for three or more 1 bit and ignore such data.

#### **Controller Key Data Read Technique**

When the controller receives a key data read request from BU91520KV-M, it performs a key data read acquisition operation using either the Timer Based Key Data Acquisition or the Interrupt Based Key Data Acquisition.

#### **Timer Based Key Data Acquisition Technique**

Under the Timer Based Key Data Acquisition Technique, the controller uses a timer to determine the states of the keys (ON or OFF) and read the key data. Please refer to the flowchart below.

Key data read processing: Refer to "Serial Data Output"

Figure 16. Flowchart

In this technique, the controller uses a timer to determine key on/off states and read the key data. The controller must check the SDO state when SCE is low every t7 period without fail. If SDO is low, the controller recognizes that a key has been pressed and executes the key data read operation.

The period t7 in this technique must satisfy the following condition. T7>t4+t5+t6

If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data

(PA) will be invalid.

- t3: Key scan execution time when the key data agreed for two key scans. (9840T(s))
- t4: Key scan execution time when the key data did not agree for two key scans and the key scan was executed again. (19680T(s)) T = 1 / fosc
- t5: Key address (43H) transfer time
- t6: Key data read time

Figure 17. Timer Based Key Data Read Operation

#### **Interrupt Based Key Data Acquisition Technique**

Under the Interrupt Based Key Data Acquisition Technique, the controller uses interrupts to determine the state of the keys (ON or OFF) and read the key data. Please refer to the flow chart diagram below.

Key data read processing: Refer to "Serial Data Output"

Figure 18. Flowchart

In this technique, the controller uses interrupts to determine key on/off states and read the key data. The controller must check the SDO state when SCE is low. If SDO is low, the controller recognizes that a key has been pressed and executes the key data read operation. After that the next key on/off determination is performed after the time t8 has elapsed by checking the SDO state when SCE is low and reading the key data. The period t8 in this technique must satisfy t8 > t4.

If a key data read operation is executed when SDO is high, the read key data (KD1 to KD30) and power-saving acknowledge data (PA) will be invalid.

- t3: Key scan execution time when the key data agreed for two key scans. (9840T(s))
- t4: Key scan execution time when the key data did not agree for two key scans and the key scan was executed again. (19680T(s)) T = 1 / fosc
- t5: Key address (43H) transfer time
- t6: Key data read time

Figure 19. Interrupt Based Key Data Read Operation

#### **LCD Driving Waveforms**

#### 8. Frame Inversion 1/3-Duty 1/2-Bias Drive Scheme

Figure 27. LCD Waveform (1/3-Duty, 1/2-Bias, Frame Inversion) (Note21)

(Note21) COM4 function is same as COM1 at 1/3-Duty.

#### **INHb Pin and Display Control**

Since the IC internal data (1/4-Duty: the display data D1 to D276 and the control data, 1/3-Duty: the display data D1 to D207 and the control data) is undefined when power is first applied, applications should set the INHb pin low at the same time as power is applied to turn off the display (This sets the S1/P1/G1 to S6/P6/G6, S7 to S69, COM1 to COM4 to the VSS level.) and during this period send serial data from the controller. The controller should then set the INHb pin high after the data transfer has completed. This procedure prevents meaningless displays at power on.

#### **Oscillation Stabilization Time**

It must be noted that the oscillation of the internal oscillation circuit is unstable for a maximum of 100µs (oscillation stabilization time) after oscillation has started.

Figure 30. Oscillation Stabilization Time

#### **Voltage Detection Type Reset Circuit (VDET)**

The Voltage Detection Type Reset Circuit generates an output signal that resets the system when power is applied for the first time and when the power supply voltage drops (that is, for example, the power supply voltage is less than or equal to the power down detection voltage (VDET = 1.8V typ.). To ensure that this reset function works properly, it is recommended that a capacitor be connected to the power supply line so that both the power supply voltage (VDD) rise time when power is first applied and the power supply voltage (VDD) fall time when the voltage drops are at least 1ms.

Figure 31. VDET Detection Timing

Power supply voltage VDD fall time: t1 > 1ms Power supply voltage VDD rise time: t2 > 1ms

#### **Reset Condition**

The internal status after power supply has been reset as the following table.

Instruction	At Reset Condition	
Key Scan mode	[KM0,KM1,KM2]=[1,1,1]: Keyscan no use	
S1/P1/G1 to S6/P6/G6 Pin	[P0,P1,P2]=[0,0,0]:all segment output	
LCD Bias	DR=0:1/3-Bias	
LCD Duty	DT=0:1/4-Duty	
Inversion	FL=0:Line Inversion	
DISPLAY Frequency	[FC0,FC1,FC2]=[0,0,0]:fosc/12288	
Display Clock mode	OC=0:Internal oscillator	
LCD Display	SC=1:OFF	
Power Mode	BU0 to 2=[1,1,1]:Power saving mode	
PWM/GPO Output	PGx=0:PWM output(x=1 to 6)	
PWM Frequency	[PF0,PF1,PF2,PF3]=[0,0,0,0]: fosc /4096	
PWM Duty	[Wn0 to Wn7]=[0,0,0,0,0,0,0,0]	
·	1/256xTp(n=1 to 6,Tp=1/fp)	

#### **Operational Notes**

#### 1. Reverse Connection of Power Supply

Connecting the power supply in reverse polarity can damage the IC. Take precautions against reverse polarity when connecting the power supply, such as mounting an external diode between the power supply and the IC's power supply pins.

#### 2. Power Supply Lines

Design the PCB layout pattern to provide low impedance supply lines. Separate the ground and supply lines of the digital and analog blocks to prevent noise in the ground and supply lines of the digital block from affecting the analog block. Furthermore, connect a capacitor to ground at all power supply pins. Consider the effect of temperature and aging on the capacitance value when using electrolytic capacitors.

#### 3. Ground Voltage

Ensure that no pins are at a voltage below that of the ground pin at any time, even during transient condition.

#### 4. Ground Wiring Pattern

When using both small-signal and large-current ground traces, the two ground traces should be routed separately but connected to a single ground at the reference point of the application board to avoid fluctuations in the small-signal ground caused by large currents. Also ensure that the ground traces of external components do not cause variations on the ground voltage. The ground lines must be as short and thick as possible to reduce line impedance.

#### 5. Thermal Consideration

Should by any chance the power dissipation rating be exceeded the rise in temperature of the chip may result in deterioration of the properties of the chip. The absolute maximum rating of the Pd stated in this specification is when the IC is mounted on a 70mm x 70mm x 1.6mm glass epoxy board. In case of exceeding this absolute maximum rating, increase the board size and copper area to prevent exceeding the Pd rating.

#### 6. Recommended Operating Conditions

These conditions represent a range within which the expected characteristics of the IC can be approximately obtained. The electrical characteristics are guaranteed under the conditions of each parameter.

#### 7. Inrush Current

When power is first supplied to the IC, it is possible that the internal logic may be unstable and inrush current may flow instantaneously due to the internal powering sequence and delays, especially if the IC has more than one power supply. Therefore, give special consideration to power coupling capacitance, power wiring, width of ground wiring, and routing of connections.

#### 8. Operation Under Strong Electromagnetic Field

Operating the IC in the presence of a strong electromagnetic field may cause the IC to malfunction.

#### 9. Testing on Application Boards

When testing the IC on an application board, connecting a capacitor directly to a low-impedance output pin may subject the IC to stress. Always discharge capacitors completely after each process or step. The IC's power supply should always be turned off completely before connecting or removing it from the test setup during the inspection process. To prevent damage from static discharge, ground the IC during assembly and use similar precautions during transport and storage.

#### 10. Inter-pin Short and Mounting Errors

Ensure that the direction and position are correct when mounting the IC on the PCB. Incorrect mounting may result in damaging the IC. Avoid nearby pins being shorted to each other especially to ground, power supply and output pin. Inter-pin shorts could be due to many reasons such as metal particles, water droplets (in very humid environment) and unintentional solder bridge deposited in between pins during assembly to name a few.

#### Operational Notes - continued

#### 11. Unused Input Pins

Input pins of an IC are often connected to the gate of a MOS transistor. The gate has extremely high impedance and extremely low capacitance. If left unconnected, the electric field from the outside can easily charge it. The small charge acquired in this way is enough to produce a significant effect on the conduction through the transistor and cause unexpected operation of the IC. So unless otherwise specified, unused input pins should be connected to the power supply or ground line.

#### 12. Regarding the Input Pin of the IC

In the construction of this IC, P-N junctions are inevitably formed creating parasitic diodes or transistors. The operation of these parasitic elements can result in mutual interference among circuits, operational faults, or physical damage. Therefore, conditions which cause these parasitic elements to operate, such as applying a voltage to an input pin lower than the ground voltage should be avoided. Furthermore, do not apply a voltage to the input pins when no power supply voltage is applied to the IC. Even if the power supply voltage is applied, make sure that the input pins have voltages within the values specified in the electrical characteristics of this IC.

#### 13. Data transmission

To refrain from data transmission is strongly recommended while power supply is rising up or falling down to prevent from the occurrence of disturbances on transmission and reception.

#### **Precaution on using ROHM Products**

1. If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment (Note 1), aircraft/spacecraft, nuclear power controllers, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASSⅢ	OL ACOM	CLASS II b	ОГУООШ
CLASSIV	CLASSⅢ	CLASSⅢ	CLASSⅢ

- 2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
  - [a] Installation of protection circuits or other protective devices to improve system safety
  - [b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure
- 3. Our Products are not designed under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc, prior to use, must be necessary:
  - [a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
  - [b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
  - [c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, and NO<sub>2</sub>
  - [d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
  - [e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
  - If Sealing or coating our Products with resin or other coating materials
  - [g] Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
  - [h] Use of the Products in places subject to dew condensation
- 4. The Products are not subject to radiation-proof design.
- 5. Please verify and confirm characteristics of the final or mounted products in using the Products.
- 6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
- 7. De-rate Power Dissipation depending on ambient temperature. When used in sealed area, confirm that it is the use in the range that does not exceed the maximum junction temperature.
- 8. Confirm that operation temperature is within the specified range described in the product specification.
- 9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

#### Precaution for Mounting / Circuit board design

- 1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
- 2. In principle, the reflow soldering method must be used on a surface-mount products, the flow soldering method must be used on a through hole mount products. If the flow soldering method is preferred on a surface-mount products, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

#### **Precautions Regarding Application Examples and External Circuits**

- 1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
- You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

#### **Precaution for Electrostatic**

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of lonizer, friction prevention and temperature / humidity control).

#### **Precaution for Storage / Transportation**

- 1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
  - [a] the Products are exposed to sea winds or corrosive gases, including Cl2, H2S, NH3, SO2, and NO2
  - [b] the temperature or humidity exceeds those recommended by ROHM
  - [c] the Products are exposed to direct sunshine or condensation
  - [d] the Products are exposed to high Electrostatic
- Even under ROHM recommended storage condition, solderability of products out of recommended storage time period
  may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is
  exceeding the recommended storage time period.
- 3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
- 4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

#### **Precaution for Product Label**

A two-dimensional barcode printed on ROHM Products label is for ROHM's internal use only.

#### **Precaution for Disposition**

When disposing Products please dispose them properly using an authorized industry waste company.

#### **Precaution for Foreign Exchange and Foreign Trade act**

Since concerned goods might be fallen under listed items of export control prescribed by Foreign exchange and Foreign trade act, please consult with ROHM in case of export.

#### **Precaution Regarding Intellectual Property Rights**

- 1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data.
- 2. ROHM shall not have any obligations where the claims, actions or demands arising from the combination of the Products with other articles such as components, circuits, systems or external equipment (including software).
- 3. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the Products or the information contained in this document. Provided, however, that ROHM will not assert its intellectual property rights or other rights against you or your customers to the extent necessary to manufacture or sell products containing the Products, subject to the terms and conditions herein.

#### Other Precaution

- 1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
- 2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
- In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
- 4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

Notice-PAA-E Rev.003

#### **General Precaution**

- 1. Before you use our Products, you are requested to care fully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of a ny ROHM's Products against warning, caution or note contained in this document.
- 2. All information contained in this docume nt is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sale s representative.
- 3. The information contained in this doc ument is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate an d/or error-free. ROHM shall not be in an y way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
