

## TS12A12511 5-Ω Single-Channel SPDT Analog Switch With Negative Signaling Capability

### 1 Features

- $\pm 2.7\text{-V}$  to  $\pm 6\text{-V}$  Dual Supply
- $2.7\text{-V}$  to  $12\text{-V}$  Single Supply
- $5\text{-}\Omega$  (Typical) ON-State Resistance
- $1.6\text{-}\Omega$  (Typical) ON-State Resistance Flatness
- $3.3\text{-V}$ ,  $5\text{-V}$  Compatible Digital Control Inputs
- Rail-to-Rail Analog Signal Handling
- Fast  $t_{\text{ON}}$ ,  $t_{\text{OFF}}$  Times
- Supports Both Digital and Analog Signal Applications
- Tiny 8-Lead SOT-23, 8-Lead MSOP, and QFN-8 Packages
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested per JESD 22
  - $\pm 2000\text{-V}$  Human Body Model (A114-B, Class II)
  - $\pm 1000\text{-V}$  Charged-Device Model (C101)

### 2 Applications

- Automatic Test Equipment
- Power Routing
- Communication Systems
- Data Acquisition Systems
- Sample-and-Hold Systems
- Relay Replacement
- Battery-Powered Systems

### 3 Description

The TS12A12511 is a bidirectional, single-channel, single-pole double-throw (SPDT) analog switch that can pass signals with swings of 0 to 12 V or  $-6\text{ V}$  to 6 V. This switch conducts equally well in both directions when it is on. The device also offers a low ON-state resistance of  $5\text{ }\Omega$  (typical), which is matched to within  $1\text{ }\Omega$  between channels. The maximum current consumption is  $<1\text{ }\mu\text{A}$  and  $-3\text{ dB}$  bandwidth is  $>93\text{ MHz}$ . The TS12A12511 exhibits break-before-make switching action, preventing momentary shorting when switching channels. This device is available packaged in an 8-lead VSSOP, 8-lead SOT-23, and a 8-pin WSON.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TS12A12511	SOT (8)	2.90 mm x 1.63 mm
	VSSOP (8)	3.00 mm x 3.00 mm
	WSON (8)	4.00 mm x 4.00 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

#### Simplified Schematic

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision B (April 2011) to Revision C	Page
<ul style="list-style-type: none"> <li>• Added <i>Pin Configuration and Functions</i> section, <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i>, <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section ..... 1</li> </ul>	1

Changes from Revision A (May 2010) to Revision B	Page
<ul style="list-style-type: none"> <li>• Deleted preview status from DGK and DCN packages ..... 3</li> </ul>	3

## 5 Pin Configuration and Functions

**DGK PACKAGE  
(TOP VIEW)**

**DCN PACKAGE  
(TOP VIEW)**

**DRJ PACKAGE  
(TOP VIEW)**

N.C. – Not internally connected

NC – Normally closed

NO – Normally open

The Exposed Thermal Pad must be electrically connected to V<sub>-</sub> or left floating.

### Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
COM	1	I/O	Common. Can be an input or output.
GND	3	—	Ground (0 V) reference
IN	6	I	Logic control input
NC	2	I/O	Normally closed. Can be an input or output.
N.C.	5	—	No connect. Not internally connected.
NO	8	I/O	Normally open. Can be an input or output.
V <sub>CC</sub>	4	I	Most positive power supply
-V <sub>CC</sub>	7	I	Most negative power supply. This pin is only used in dual-supply applications and should be tied to ground in single-supply applications.

## 6 Specifications

### 6.1 Absolute Maximum Ratings<sup>(1)</sup>

T<sub>A</sub> = 25°C (unless otherwise noted).

			MIN	MAX	UNIT
V <sub>CC</sub> to -V <sub>CC</sub>			0	13	V
V <sub>CC</sub> to GND			-0.3	13	V
-V <sub>CC</sub> to GND			-6.5	0.3	V
V <sub>I/O</sub>	Analog inputs	NC, NO, or COM	-V <sub>CC</sub> - 0.5	V <sub>CC</sub> + 0.5	V
I <sub>IN</sub>	Digital inputs			±30	mA
I <sub>I/O</sub>	Peak current	NC, NO, or COM		±100	mA
	Continuous current	NC, NO, or COM		±50	mA
T <sub>A</sub>	Operating temperature		-40	85	°C
T <sub>stg</sub>	Storage temperature		-65	150	°C

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.  
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V <sub>CC</sub>			0	12	V
-V <sub>CC</sub>			-6	0	V
V <sub>I/O</sub>			-V <sub>CC</sub>	V <sub>CC</sub>	V
V <sub>IN</sub>			0	V <sub>CC</sub>	V

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		TS12A12511			UNIT
		DCN	DGK	DRJ	
		8 PINS			
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	218.4	184.5	47.8	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	89.9	71.0	48.6	
R <sub>θJB</sub>	Junction-to-board thermal resistance	144.4	104.5	24.2	
ψ <sub>JT</sub>	Junction-to-top characterization parameter	7.8	11.3	1.2	
ψ <sub>JB</sub>	Junction-to-board characterization parameter	141.7	103.3	24.4	
R <sub>θJC(bot)</sub>	Junction-to-case (bottom) thermal resistance	N/A	N/A	9.0	

- (1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, [SPRA953](#).

## 6.5 Electrical Characteristics: ±5-V Dual Supply

 $V_{CC} = 5\text{ V} \pm 10\%$ ,  $-V_{CC} = -5\text{ V} \pm 10\%$ ,  $T_A = -40^\circ\text{C}$  to  $85^\circ\text{C}$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS	$T_A = 25^\circ\text{C}$			$T_A = -40^\circ\text{C}$ to $85^\circ\text{C}$			UNIT		
		MIN	TYP	MAX	MIN	TYP	MAX			
<b>ANALOG SWITCH</b>										
	Analog signal range				$-V_{CC}$		$V_{CC}$	V

## 8 Detailed Description

### 8.1 Overview

The TS12A12511 is a bidirectional, single channel, single-pole double-throw (SPDT) analog switch that can pass signals with swings of 0 to 12 V or –6 V to 6 V. This switch conducts equally well in both directions when it is on. It also offers a low ON-state resistance of 5  $\Omega$  (typical), which is matched to within 1  $\Omega$  between channels. The max current consumption is < 1  $\mu$ A and –3 dB bandwidth is > 93 MHz. The TS12A12511 exhibits break-before-make switching action, preventing momentary shorting when switching channels. This device is available packaged in an 8-lead MSOP, 8-lead SOT-23, and a 8-pin QFN.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

The TS12A12511 can pass signals with swings of 0 to 12 V or –6 V to 6. The device is great for applications where the AC signals do not have a common mode voltage since both the positive and negative swing of the signal can be passed through the device with little distortion.

### 8.4 Device Functional Modes

**Table 1. Truth Table**

IN	NC TO COM, COM TO NC	NO TO COM, COM TO NO
L	On	Off
H	Off	On

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

Analog signals that range over the entire supply voltage ( $V_{CC}$  to GND) or ( $V_{CC}$  to  $-V_{CC}$ ) can be passed with very little change in ON-state resistance. The switches are bidirectional, so the NO, NC, and COM pins can be used as either inputs or outputs.

### 9.2 Typical Application

Figure 23. Typical Application Schematic

#### 9.2.1 Design Requirements

Pull the digitally controlled input select pin IN to VCC or GND to avoid unwanted switch states that could result if the logic control pin is left floating.

#### 9.2.2 Detailed Design Procedure

Select the appropriate supply voltage to cover the entire voltage swing of the signal passing through the switch since the TS12A12511 input/output signal swing of the device is dependant of the supply voltage  $V_{CC}$  and  $-V_{CC}$ .

**Typical Application (continued)**

**9.2.3 Application Curve**

**Figure 24.  $R_{ON}$  vs  $V_{IO}$**

## 10 Power Supply Recommendations

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings, because stresses beyond the listed ratings can cause permanent damage to the device. Always sequence VCC and -VCC on first, followed by NO, NC, or COM.

Although it is not required, power-supply bypassing improves noise margin and prevents switching noise propagation from the VCC supply to other components. A 0.1- $\mu$ F capacitor, connected from VCC to GND, is adequate for most applications.

## 11 Layout

### 11.1 Layout Guidelines

It is recommended to place a bypass capacitor as close to the supply pins, VCC and -VCC, as possible to help smooth out lower frequency noise to provide better load regulation across the frequency spectrum. Minimize trace lengths and vias on the signal paths in order to preserve signal integrity.

### 11.2 Layout Example

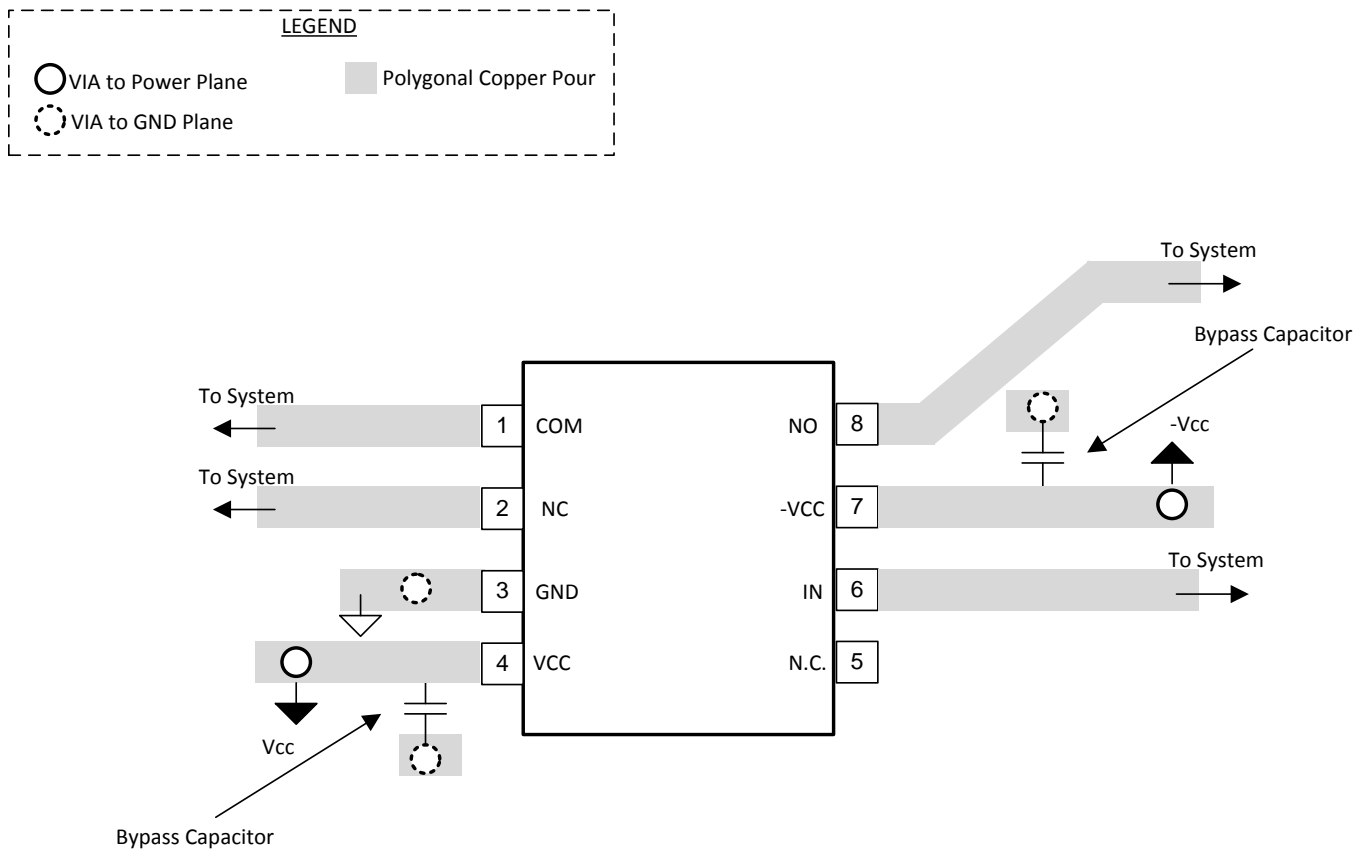

Figure 25. Layout Schematic

## 12 Device and Documentation Support

### 12.1 Trademarks

All trademarks are the property of their respective owners.

### 12.2 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 12.3 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TS12A12511DCNR	ACTIVE	SOT-23	DCN	8	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	NFHS HFHA	<a href="#">Samples</a>
TS12A12511DGKR	ACTIVE	VSSOP	DGK	8	2500	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	2US 2UA	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

PLASTIC SMALL OUTLINE NO-LEAD

4205439/C 12/10

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - B. This drawing is subject to change without notice.
  - C. SON (Small Outline No-Lead) package configuration.
  - The package thermal pad must be soldered to the board for thermal and mechanical performance. See the Product Data Sheet for details regarding the exposed thermal pad dimensions.
  - E. Package complies to JEDEC MO-229 variation WGGB.

## THERMAL PAD MECHANICAL DATA

DRJ (S-PWSON-N8)

PLASTIC SMALL OUTLINE NO-LEAD

### THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

SMALL PACKAGE OUTLINE NO-LEAD

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at [www.ti.com](http://www.ti.com) <<http://www.ti.com>>.
  - E. Laser cutting apertures with electropolish and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - F. Customers should contact their board fabrication site for solder mask tolerances and vias tenting recommendations for vias placed in the thermal pad.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
