## 1. General Specification

The Features is described as follow:

■ Module dimension: 146.0 × 45.0 × 2.05 mm

■ Active area: 135.65 × 33.89 mm

■ Dot Matrix: 256 x 64 Dots

■ Pixel Size: 0.5 × 0.5 mm

■ Pixel Pitch: 0.53 × 0.53 mm

■ Display Mode : Passive Matrix

■ Duty: 1/64 Duty

■ Display Color: Yellow

■ IC:SSD1322

### **Midas LCD Part Number System**

<b>MC</b> 1	COG 2	32033 A * 6 W * * - S N T L W * * 3 4 5 6 7 8 9 - 10 11 12 13 14 15 16

## **Interface Pin Function**

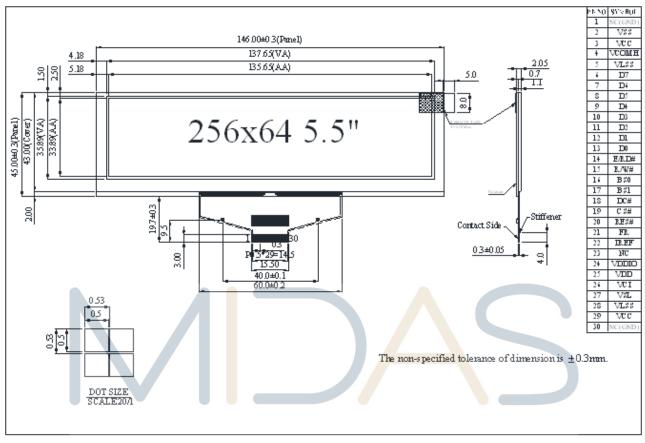

Pin Number	Symbol	I/O	Function
Power Sup	ply		
26	VCI	Р	Power Supply for Operation This is a voltage supply pin. It must be connected to external source & always be equal to or higher than VDD & VDDIO.
25	VDD	P	Power Supply for Core Logic Circuit  This is a voltage supply pin. It can be supplied externally (within the range of 2.4~2.6V) or regulated internally from VCI. A capacitor should be connected between this pin & VSS under all circumstances.
24	VDDIO	P	Power Supply for I/O Pin  This pin is a power supply pin of I/O buffer. It should be connected to VDD or external source. All I/O signal should have VIH reference to VDDIO. When I/O signal pins (BS0~BS1, D0~D7, control signals) pull high, they should be connected to VDDIO.
2	VSS	Р	Ground of Logic Circuit  This is a ground pin. It also acts as a reference for the logic pins. It must be connected to external ground.
3,29	VCC	Р	Power Supply for OLED Panel These are the most positive voltage supply pin of the chip. They must be connected to external source.
5,28	VLSS	Р	Ground of Analog Circuit  These are the analog ground pins. They should be connected to VSS externally.
Driver			
22	IREF		Current Reference for Brightness Adjustment This pin is segment current reference pin. A resistor should be connected between this pin and VSS. Set the current lower than 10uA.
4	VCOMH	Р	Voltage Output High Level for COM Signal This pin is the input pin for the voltage output high level for COM signals. A tantalum capacitor should be connected between this pin and VSS.
27	VSL	Р	Voltage Output Low Level for SEG Signal This is segment voltage reference pin. When external VSL is not used, this pin should be left open. When external VSL is used, this pin should connect with resistor and diode to ground.

Testing Pa	ds							
21	FR	0	Frame Frequency Triggering Sign	nal				
			This pin will send out a signal that co		ed to iden	tifv the		
			driver status. Nothing should be con					
			be left open individually.					
16	BS0	ı	Communicating Protocol Select					
17	BS1	-	These pins are MCU interface selec	tion input.	See the fo	llowing		
			table:					
				BS0	BS1			
			3-wire SPI	1	0			
			4-wire SPI	0	0			
			8-bit 68XX Parallel	1	1			
			8-bit 80XX Parallel	0

			the microprocessor's data bus. When serial mode is selected, D1 will be the serial data input SDIN and D0 will be the serial clock input SCLK. Unused pins must be connected to VSS except for D2 in serial mode.
Reserve			
23	N.C.	-	Reserved Pin The N.C. pin between function pins are reserved for compatible and flexible design.
1,30	N.C. (GND)	-	Reserved Pin (Supporting Pin) The supporting pins can reduce the influences from stresses on the function pins. These pins must be connected to external ground.

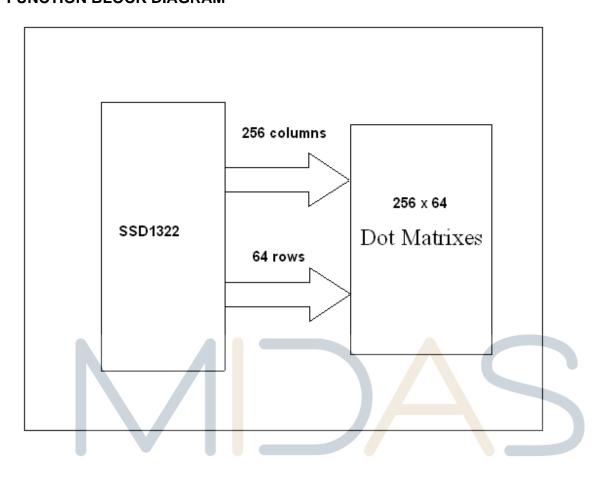

## 4. Counter Drawing & Block Diagram

design • manufacture • supply

### **FUNCTION BLOCK DIAGRAM**

design • manufacture • supply

## **5.Absolute Maximum Ratings**

Parameter	Symbol	Min	Max	Unit	Notes
Supply Voltage for Operation	VCI	-0.3	4	V	1, 2
Supply Voltage for Logic	VDD	-0.5	2.75	V	1, 2
Supply Voltage for I/O Pins	VDDIO	-0.5	VCI	V	1, 2
Supply Voltage for Display	VCC	-0.5	20	V	1, 2
Operating Temperature	TOP	-40	80	°C	-
Storage Temperature	TSTG	-40	80	°C	-

Note 1: All the above voltages are on the basis of "VSS = 0V".

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it is desirable to use this module under the conditions according to Section 6 "Electrical Characteristics". If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate

## **6.Electrical Characteristics**

Item	Symbol	Condition	Min	Тур	Max	Unit
Supply Voltage for Operation	VCI	Note	2.8	3.0	3.3	V
Supply Voltage for Display	VCC	_	14	14.5	16	V
High Level Input	VIH	_	0.8×V <sub>DDIO</sub>	_	$V_{DDIO}$	V
Low Level Input	VIL	_	0	_	0.2×V <sub>DDIO</sub>	V
High Level Output	VOH	_	0.9×V <sub>DDIO</sub>	_	$V_{DDIO}$	V
Low Level Output	VOL	_	0	_	0.1×V <sub>DDIO</sub>	V
50% Check Board operating	Current	VCC =14.5V	34	36	45	mA

Note: Supply Voltage for Logic = VDD core power supply can be regulated from VCI.

# 7. Optical Characteristics

Item	Symbol	Condition	Min	Тур	Max	Unit
View Angle	(V)θ	_	160	_	_	deg
, wigio	(Η)φ	_	160	_	_	deg
Contrast Ratio	CR	Dark	2000:1	_	_	_

	T fall	_	_	10	_	μs
Display with 50% check	S	40	60	_	cd/m2	
CIEx(Yellow)	x,y(CIE1931)	0.45	0.47	0.49	_	
CIEy(Yellow)		x,y(CIE1931)	0.48	0.50	0.52	_

### 8.OLED Lifetime

ITEM	Conditions	Min	Тур	Remark
Operating Life Time	Ta=25°C / Initial 50% check board brightness Typical Value	30,000 Hrs	-	Note

### Notes:

- 1. Life time is defined the amount of time when the luminance has decayed to <50% of the initial value.
- 2. This analysis method uses life data obtained under accelerated conditions to extrapolate an estimated probability density function (*pdf*) for the product under normal use conditions.
- 3. Screen saving mode will extend OLED lifetime.

## 9.Reliability

**Content of Reliability Test** 

Environmenta	l Test	1	Amalianti
Test Item	Content of Test	Test Condition	Applicable Standard
High Temperature storage	Endurance test applying the high storage temperature for a long time.	80 240hrs	
Low Temperature storage	Endurance test applying the low storage temperature for a long time.	-30 240hrs	
High Temperature Operation	Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time.	70 240hrs	
Low Temperature Operation	Endurance test applying the electric stress under low temperature for a long time.	-20 240hrs	
High Temperature/ Humidity Storage	Endurance test applying the high temperature and high humidity storage for a long time.	60 ,90%R <mark>H</mark> 240hrs	
Temperature Cycle	Endurance test applying the low and high temperature cycle.  -40 25 80  30min 5min 30min 1 cycle	-20 /70 100 cycles	
Mechanical Tes	st:		
Vibration test	Endurance test applying the vibration during transportation and using.	10~22Hz→1.5mmp-p 22~500Hz→1.5G Total 0.5hr	
Shock test	Constructional and mechanical endurance test applying the shock during transportation.	50G Half sin wave 11 ms 3 times of each direction	
Atmospheric pressure test	Endurance test applying the atmospheric pressure during transportation by air.	115mbar 40hrs	
Others			
Static electricity test	Endurance test applying the electric stress to the terminal.	VS=800V,RS=1.5kΩ CS=100pF 1 time	

<sup>\*\*\*</sup>Supply voltage for OLED system =Operating voltage at 25°C

#### Test and measurement conditions

- 1. All measurements shall not be started until the specimens attain to temperature stability. After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at 23±5°C; 55±15% RH.
- 2. All-pixels-on is used as operation test pattern.
- 3. The degradation of Polarizer are ignored for High Temperature storage, High Temperature/ Humidity Storage, Temperature Cycle

### **Evaluation criteria**

- 1. The function test is OK.
- 2. No observable defects.
- 3. Luminance: > 50% of initial value.
- 4. Current consumption: within ± 50% of initial value.

### **APPENDIX:**

### **RESIDUE IMAGE**

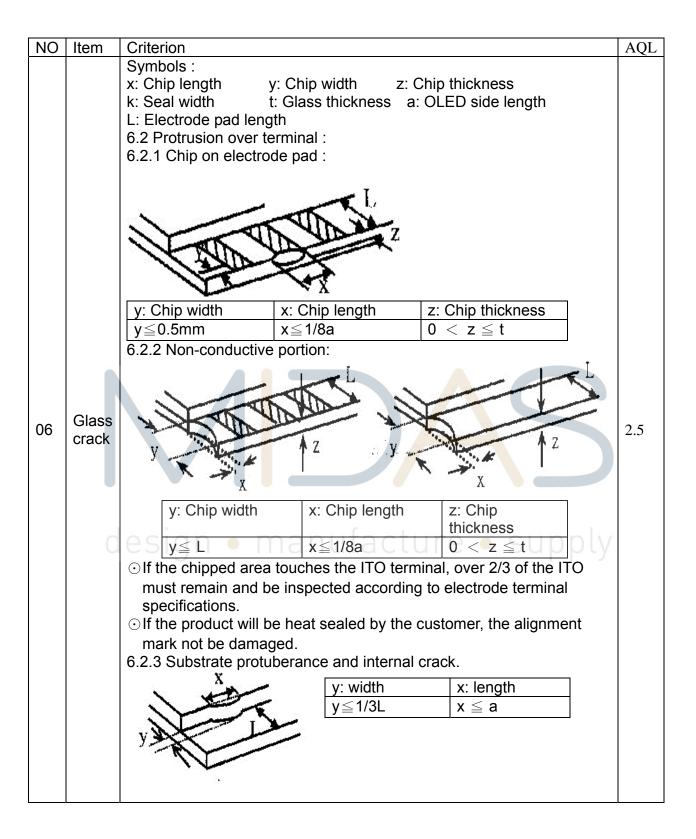

Because the pixels are lighted in different time, the luminance of active pixels may reduce or differ from inactive pixels. Therefore, the residue image will occur. To avoid the residue image, every pixel needs to be lighted up uniformly.

### 11.Precautions in use of OLED Modules

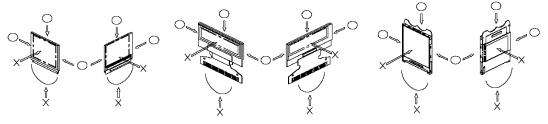

- (1) Avoid applying excessive shocks to module or making any alterations or modifications to it.
- (2) Don't make extra holes on the printed circuit board, modify its shape or change the components of OLED display module.
- (3) Don't disassemble the OLED display module.
- (4) Don't operate it above the absolute maximum rating.
- (5) Don't drop, bend or twist OLED display module.
- (6) Soldering: only to the I/O terminals.
- (7) Storage: please storage in anti-static electricity container and clean environment.
- (8) It's pretty common to use "Screen Saver" to extend the lifetime and Don't use fix information for long time in real application.
- (9) Don't use fixed information in OLED panel for long time, that will extend "screen burn" effect time..
- (10) T aaæ has the right to change the passive components, including R2and R3 adjust resistors. (Resistors, capacitors and other passive components will have different appearance and color caused by the different supplier.)
- (11) T aaæ have the right to change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, T aaæ have the right to modify the version.)

### 11.1 Handling Precautions

- (1) Since the display panel is being made of glass, do not apply mechanical impacts such us dropping from a high position.
- (2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- (3) If pressure is applied to the display surface or its neighborhood of the OLED display module, the cell structure may be damaged and be careful not to apply pressure to these sections.
- (4) The polarizer covering the surface of the OLED display module is soft and easily scratched. Please be careful when handling the OLED display module.
- (5) When the surface of the polarizer of the OLED display module has soil, clean the surface. It takes advantage of by using following adhesion tape.
- \* Scotch Mending Tape No. 810 or an equivalent

Never try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent Also, pay attention that the following liquid and solvent may spoil the polarizer:

- \* Water
- \* Ketone
- \* Aromatic Solvents
- (6) Hold OLED display module very carefully when placing OLED display module into the System housing. Do not apply excessive stress or pressure to OLED display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.

- (7) Do not apply stress to the LSI chips and the surrounding molded sections.
- (8) Do not disassemble nor modify the OLED display module.
- (9) Do not apply input signals while the logic power is off.
- (10) Pay sufficient attention to the working environments when handing OLED display modules to prevent occurrence of element breakage accidents by static electricity.
- \* Be sure to make human body grounding when handling OLED display modules.
- \* Be sure to ground tools to use or assembly such as soldering irons.
- \* To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
- \* Protective film is being applied to the surface of the display panel of the OLED display module. Be careful since static electricity may be generated when exfoliating the protective film
- (11) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OLED display module has been stored surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5.
- (12) If electric current is applied when the OLED display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful to avoid the above.

### 11.2 Storage Precautions

- (1) When storing OLED display modules, put them in static electricity preventive bags avoiding exposure to direct sun light nor to lights of fluorescent lamps. And, also, avoiding high temperature and high humidity environment or low temperature (less than 0°C) environments. (We recommend you to store these modules in the packaged state when they were shipped from T aa AO[{ ] [ }^} o. At that time, be careful not to let water drops adhere to the packages or bags nor let dewing occur with them.
- (2) If electric current is applied when water drops are adhering to the surface of the OLED display module, when the OLED display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful about the above.

### 11.3 Designing Precautions

- (1) The absolute maximum ratings are the ratings which cannot be exceeded for OLED display module, and if these values are exceeded, panel damage may be happen.
- (2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the VIL and VIH specifications and, at the same time, to make the signal line cable as short as possible.
- (3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VDD). (Recommend value: 0.5A)
- (4) Pay sufficient attention to avoid occurrence of mutual noise interference with the neighboring devices.
- (5) As for EMI, take necessary measures on the equipment side basically.
- (6) When fastening the OLED display module, fasten the external plastic housing section.
- (7) If power supply to the OLED display module is forcibly shut down by such errors as taking out the main battery while the OLED display panel is in operation, we cannot guarantee the quality of this OLED display module. Connection (contact) to any other potential than the above may lead to rupture of the IC.
