Product Description

RXM Miniature Relays

Product Description

The RXM miniature relay range consists of:

- 12 A relays with DPDT contacts, 10 A relays with 3PDT contacts, 6 A relays with 4PDT contacts, and 3 A “low level” relays with 4PDT contacts. All of these relays have the same dimensions.
- Sockets with mixed or separate contact terminals.
- Protection modules (diode, RC circuit or varistor). All these modules are common to all sockets.
- A metal hold-down clip for all sockets.
- A plastic hold-down clip for all sockets.
- A 2-pole bus jumper that can be used on sockets with separate contact terminals to simplify wiring when creating a jumper between the coil terminals.
- Clip-in markers for all the sockets except RXZ E2M114.

Relay Description

- Spring return push button for testing the contacts (green: DC, red: AC).
- Mechanical “relay status” indicator.
- Optional removable lock-down door and push button, enabling forced maintaining of the contacts for test or maintenance purposes. During operation, this lock-down door must always be in the closed position.
- Bipolar LED (depending on version) indicating the relay status.
- Removable marker for relay identification.
- Four notches for DIN rail mounting adapter or panel mounting adapter.
- Eight, eleven, or fourteen pins.
- Area by which the product can be easily gripped.
- Mounting adapter enabling direct mounting of the relay on a panel.
- Mounting adapter enabling direct mounting of the relay on a DIN rail.

Socket Description

Sockets with Mixed Contact Terminals

- Connection by screw clamp terminals or box lug connector.
- Fourteen female contacts for the relay pins.
- Location for protection modules.
- Locking components for plastic and metal hold-down clips.
- Locating slot for mounting on DIN rail.
- Two or four mounting holes for panel mounting.

NOTE: The inputs are mixed with the relay coil terminals, with the outputs being located on the opposite side of the socket.

Sockets with Separate Contact Terminals

1. Box lug connector.
2. Eight, eleven, or fourteen female contacts for the relay pins.
3. Location for protection modules.
4. Locking components for plastic and metal hold-down clips.
5. Locating slot for mounting on DIN rail.
6. Two mounting holes for panel mounting.
7. Location for bus jumpers (see mounting on sockets on page 11).

NOTE: The inputs and outputs are separated from the relay coil terminals.

General characteristics

Conforming to standards		IEC/EN 61810-1 (iss. 2), UL 508, CSA C22-2 n° 14

Product Description

The RPM miniature relay range consists of:

1. 15 A relays with SPDT, DPDT, 3PDT, and 4PDT contacts.
2. Sockets with mixed contact terminals.
3. Protection modules (diode, RC circuit, or varistor) or 1 timer module. All these modules are common to all the sockets except for the timer module, which can only be used on the 3-pole or 4-pole sockets.
4. A metal hold-down clip for SPDT relays.

Relay Description

1. Spring return push button for testing the contacts (green: DC, red: AC).
2. Mechanical “relay status” indicator.
3. Optional removable lock-down door and push button, enabling forced maintaining of the contacts for test or maintenance purposes. During operation, this lock-down door must always be in the closed position.
4. Bipolar LED (depending on version) indicating the relay status.
5. Removable legend for relay identification.
6. Four notches for DIN rail mounting adapter or panel mounting adapter.
7. Five, eight, eleven, or fourteen pins.
8. Area by which the product can be easily gripped.
9. Mounting adapter enabling direct mounting of the relay on a panel.
10. Mounting adapter enabling direct mounting of the relay on a DIN rail.

Socket Description

Sockets with mixed contact terminals

1. Connection by screw clamp terminals.
2. Five, eight, eleven, or fourteen female contacts for the relay pins.
3. Location for protection modules or the timer module.
4. Locating slot for mounting on DIN rail with mounting clip.
5. Two or four mounting holes for panel mounting.

NOTE: The inputs are mixed with the relay coil terminals, with the outputs being located on the opposite side of the socket.

Product Description

The RUM universal relay range consists of:

1. 10 A relays with DPDT and 3PDT contacts, with cylindrical or flat pins, and 3 A “low level” relays with 3PDT contacts, with cylindrical pins. All these relays have the same dimensions.
2. Sockets with mixed or separate contact terminals.
3. Protection modules (diode, RC circuit, or varistor) or 1 timer module. All these modules are common to all sockets.
4. A metal hold-down clip for all sockets.
5. A 2-pole bus jumper that can be used on sockets with separate contact terminals to simplify cabling when creating a jumper between the coil terminals.
6. Clip-in markers for the sockets.

Relay Description

1. Spring return push button for testing the contacts (green: DC, red: AC).
2. Mechanical “relay status” indicator.
3. Optional removable lock-down door and push button, enabling forced maintaining of the contacts for test or maintenance purposes. During operation, this lock-down door must always be in the closed position.
4. Bipolar LED (depending on version) indicating the relay status.
5. Removable marker for relay identification.
6. Eight or eleven cylindrical or flat pins.
7. Area by which the product can be easily gripped.

Socket Description

Sockets with mixed contact terminals

1. Box lug connectors.
2. Eight or eleven female contacts for the relay cylindrical pins.
3. Location for protection modules or the timer module.
4. Locking component for metal hold-down clip.
5. Locating slot for DIN rail mounting.
6. Two mounting holes for panel mounting.

NOTE: The inputs are mixed with the relay coil terminals, with the outputs being located on the opposite side of the socket.

Sockets with separate contact terminals

1. Box lug connectors.
2. a. Eight or eleven female contacts for the relay cylindrical pins.
b. Eleven female contacts for the relay flat pins.
3. Location for protection modules or the timer module.
4. Locking component for metal hold-down clip.
5. Locating slot for mounting on DIN rail.
6. Two mounting holes for panel mounting.
7. Location for bus jumpers (see mounting on sockets on page 28).

NOTE: The inputs and outputs are separated from the relay coil terminals.

Product Description

RPF power relays with DPDT or 2 normally open (N.O.) DPST contacts consist of:

1. Four or six input/output, flat pins.
2. Two coil, flat pins.
3. A locating slot for mounting on DIN rail.
4. Two mounting holes for panel mounting.

General characteristics

Product Description

The RSB interface relay range consists of:

1. 12 A relays with SPDT contact, 16 A relays with SPDT contact, and 8 A relays with DPDT contacts.
2. Sockets with separate contact terminals.
3. Protection modules (diode, diode + LED, RC circuit, or varistor + LED). All these modules are common to all sockets.
4. A plastic hold-down clip for all sockets.
5. Clip-in markers for the sockets.

Socket Description

Sockets with Separate Contact Terminals

1. Box lug connectors.
2. Five or eight female contacts for the relay pins.
3. A mounting hole for panel mounting.
4. Location for protection modules.
5. Locking components for plastic hold-down clip.
6. Locating slot for mounting on DIN rail.

NOTE: The inputs and outputs are separate from the coil terminals.

Interface relays

When using relay RSB 1A160●● with socket RSZE1S48M, terminals 11 and 21, 14 and 24, and 12 and 22 must be jumpered.

Contact types

Symbol	Configuration	USA	EU
	Make contact (Normally Open)	SPST-N.O. DPST-N.O. nPST-N.O. ¹	N.O.
	Break contact (Normally Closed)	SPST-N.C. DPST-N.C. nPST-N.C. ¹	N.C.
	Changeover Contact (Form C)	SPDT DPDT nPDT ¹	C/O

¹ n = number of contacts.

Utilization categories

Category	Type of current	Applications
AC-1	AC single-phase AC 3-phase	Resistive or slightly inductive loads.
AC-3	AC 3-phase	Starting and braking of squirrel cage motors; reversing direction of rotation only after stopping of motor.
AC-4	AC 3-phase	Starting of squirrel cage motors, inching. Plugging, reversing direction of rotation.
DC-1	DC	Resistive or slightly inductive loads. ²
AC-14	AC single-phase	Control of electromagnetic loads (< 72 VA), auxiliary control relays, power contactors, electromagnetic solenoid valves and electromagnets.
AC-15	AC single-phase	Control of electromagnetic loads (> 72 VA), auxiliary control relays, power contactors, electromagnetic solenoid valves and electromagnets.
DC-13	DC	Control of electromagnetic loads, auxiliary control relays, power contactors, magnetic solenoid valves and electromagnets.

² The switchable voltage can be doubled, for an equal current, by connecting two contacts in series.

Protection categories

Category	Explanation	Condition
RT 0	Unenclosed relay	Relay not provided with a protective case.
RT I	Dust protected relay	Relay provided with a case which protects its mechanism from dust.
RT II	Flux-proof relay	Relay capable of being automatically soldered without allowing the migration of solder fluxes beyond the intended areas.
RT III	Wash-tight relay	Relay capable of being automatically soldered and then washed to remove flux residues without risk of ingress of flux or washing solvents.
RT IV	Sealed relay	Relay provided with a case which has no venting to the outside atmosphere.
RT V	Hermetically sealed relay	Sealed relay having an enhanced level of sealing.

Protection Modules

Whenever an inductive load is de-energized (coil of a relay or of a contactor), an overvoltage appears at its terminals. This voltage peak can reach several thousand volts and a frequency of several MHz. It is likely to disturb the operation of automation systems which contain electronic devices.

Protection modules are used to reduce the voltage peak on de-energization and, therefore, limit the energy of interference signals to a level that will not disturb surrounding coils and electronic devices. They are used to avoid:

- electromagnetic compatibility problems
- the deterioration of contact materials
- the destruction of insulation due to overvoltage
- the destruction of electronic components

Diode Protection Module (with or without LED)

- Advantages
 - accumulation of energy allowing current flow in the same direction
 - absence of any voltage peaks at the coil terminals
 - low cost
- Disadvantages
 - increase in relay drop-out time (3 to 4 times the usual time)
 - no polarity protection

Coil voltage with diode protection module (Vdc only)

Coil voltage with varistor protection module (Vac and Vdc)

Protection Module with Varistor

- Advantages
 - can be used with AC and DC supply
 - voltage peak limited to about 2 Un
 - little effect on relay drop-out time
- Disadvantages
 - no modification of coil's own oscillating frequency
 - limitation of switching frequency

Protection Module with RC Circuit

- Advantages
 - coil oscillating frequency reduced to about 150 Hz
 - voltage peak limited to 3 Un
 - little effect on relay drop-out time
- Disadvantages
 - no protection for low voltages

Coil voltage with RC circuit protection module (Vac only)

S1 = S2 = Energy released
