Introduction

Product Overview

Series G vs. Series C

Eaton’s Electrical Sector, under the Eaton brand, offers the widest variety of molded case circuit breakers available today. Designed for electrical and machinery OEMs serving a range of industries and applications, these proven designs incorporate the latest in innovation with the high reliability that has been our hallmark since the advent of the circuit breaker in the 1920s.

The Series C family ranges from 15–2500 amperes, and includes thermal-magnetic breakers, electronic trip breakers, molded case switches, motor circuit protectors, and specially designed breakers for engine generator, DC and mining applications.

The new Series G line features an average 35% size reduction, common field-installable internal accessories, and advanced trip unit functionality that eliminates the need for rating plugs. These breakers meet the requirements of UL®, CSA®, IEC, CCC and CE®, allowing the OEM to standardize on a design that meets the needs of their global customer base.

Application Description

Eaton molded case circuit breakers cover the widest range of applications in the industry:

- Electrical OEMs
- Machinery OEMs
- Navy breakers:
  - UL 489 Supplement SB
  - MIL-C-17588
  - MIL-C-17361
  - ABS/NVR
- Mining breakers up to 1100 Vac
- Earth leakage
- DC breakers 125–750 Vdc
- Engine generator breakers 15–1200 amperes
- Current limiting breakers

Typical Applications

- Machine Tool Control Panels and Motor Control Centers
  Designed for these equipment requirements, including new world-class accessories.
- Panelboards
  As both main and branch circuit protection devices.
- Feeder Pillars
  In distribution systems to provide main and branch circuit protection.
- Switchgear
  In distribution systems to provide main and branch circuit protection up to 2500 amperes (RG-Frame).
- Busbar Trunking Tap-Offs
  In busbar trunking tap-offs to provide circuit protection.
- Individual Enclosures
  Completely assembled in enclosures to meet specific customer requirements.
- Additional Applications
  Special versions of each Eaton frame are available to provide safe equipment control and protection in mining and other applications. Contact your Eaton agent or distributor for additional information.

Typical Eaton Applications

- Panelboard
- Individual Circuit Breaker Enclosure
- Busbar Trunking Tap-Off
- Machine Tool Control Panel
- Switchboard

### Notes
- 125 amperes is the maximum UL and CSA rating for EG.
- 600 amperes is the maximum UL and CSA rating for LG.
- 1200 amperes is the maximum UL and CSA rating for NG.
2.2 Molded Case Circuit Breakers

Series G, 15–2500 Amperes for UL, CSA and IEC Applications

The EG, JG and LG frames are designed around space-saving footprints. The NG and RG use the proven Eaton Series C ND and RD designs. The Series G family includes five frame sizes in ratings from 15 to 2500 amperes. Series G offers a choice of several interrupting capacities up to 200 kA at 480 volts AC (200 kA at 240 volts AC).

Series G molded case circuit breakers are also available in direct current options. Please see Specialty Breakers Section 2.6 for more details.

Standard calibration is 40 °C. For applications in high ambient temperature conditions, 50 °C factory calibration is available on thermal-magnetic breakers (not UL).

The Most Logically Designed Contact Assembly

The flexibility and outstanding performance characteristics of Eaton circuit breakers are made possible by the best contact designs in circuit breaker history. Our technology creates a high-speed “blow-open” action using the electromechanical forces produced by high-level fault currents.

Eaton circuit breakers are operated by a toggle-type mechanism that is mechanically trip-free from the handle so that the contacts cannot be held closed against short circuit currents. Tripping due to overload or short circuits is clearly indicated by the position on the handle. This remarkably fast and dependable contact action is designed to enhance safety.

Thorough In-Plant Testing

The quality, dependability and reliability of every Eaton Circuit Breaker is ensured by a thorough program of in-plant testing. Two calibration tests are conducted on every pole of every circuit breaker to verify the trip mechanism, operating mechanism, continuity and accuracy.

Current Limiting Characteristics

Circuit breakers are current limiting because of their high repulsion contact arrangement and use of state-of-the-art arc extinguishing technology. Eaton offers one of the most complete lines of current limiting breakers in the industry. The industrial breakers are available in current limiting versions with interrupting capacities up to 200 kA at 480 V without fuses in the same physical size as standard and high interrupting capacity breakers.

Product Overview

Series G, 15–2500 Amperes for UL, CSA and IEC Applications

Eaton Series G molded case circuit breakers provide increased performance in considerably less space than standard circuit breakers or comparable fusible devices.

The “G” signifies global applications: Series G circuit breakers are marked with UL, CSA, CE, IEC and KEMA KEUR listings. Other advantages include:

- Field-fit accessories
- Common accessories through 630 amperes
- Electronic trip units from 20 to 2500 amperes
- UL-listed and IEC-rated, 30 mA ground fault/earth leakage modules
- Built-in ground fault protection down to 20 amperes
Operating Mechanisms

Eaton circuit breakers have a toggle handle operating mechanism, which also serves as a switching position indicator. The indicator shows the positions of: ON, OFF and TRIPPED.

The toggle handle snaps into the TRIPPED position if the breaker is tripped by one of its overcurrent, short circuit, shunt or undervoltage releases. Before the circuit breaker can be reclosed following a trip-out, the toggle handle must be brought beyond the OFF position (RESET). The circuit breaker can then be reclosed.

As an additional switching position indicator for EG- to RG-Frame circuit breakers, there are two windows on the right and on the left of the toggle handle, in which the switching state is indicated by means of the colors red, green and white corresponding to the ON, OFF and TRIPPED positions respectively.

Positions of the Toggle Handle Drive

OFF  Reset
ON       Tripped

Standards and Certifications

Eaton Series G circuit breakers meet applicable UL 489 and IEC 60947-2 standards.

Molded case circuit breakers from Eaton are designed to conform with the following international standards:

- Australian Standard AS 2184 and AS 3947.2 molded case circuit breakers
- British Standards Institution Standard EN609472
- International Electromechanical Commission Recommendations IEC 609472 circuit breakers
- Japanese T-Mark standard molded case circuit breakers
- National Electrical Manufacturers Association Standards Publication No. AB1-1993 molded case circuit breakers
- Swiss Electro-Technical Association Standard SEV 9472, Safety Regulations for circuit breakers
- Union Technique de l’Electricité Standard NF C 63-120, low voltage switchgear and control gear circuit breaker requirements
- Verband Deutscher Elektrotechnike (Association of German Electrical Engineers) Standard VDE 0660, low voltage switchgear and control gear, circuit breakers

Global Third-Party Certification

Certification marks ensure product compliance with the total standard via the third party witnessing of tests by globally recognized independent certification organizations.

KEMA is a highly recognized, independent international organization that offers certification and inspection facilities for equipment in many industries. The KEMA-KEUR mark is the highest certification an electrical product can receive from KEMA. Our IEC 60947-2 molded case circuit breakers are KEMA tested and certified. These breakers are also listed in accordance with UL 489, as well as CSA C22.2 No. 5-02.

KEMA, UL and CSA provide ongoing follow-up testing and inspections to ensure that Eaton molded case circuit breakers continue to meet their exacting standards.

ISO Certification

Eaton circuit breakers are manufactured in ISO® certified facilities.
Product Selection Overview

Electronic Trip Units (Digitrip RMS Trip Units)—Multi-Function Electronic Trip Units for All Applications

True rms Sensing

Digitrip RMS trip units use Eaton’s microprocessor-based intelligence to provide true rms sensing, permitting increased accuracy and reliable system protection. True rms sensing is not susceptible to nuisance tripping when waveforms containing high harmonic currents are present.

Digitrip RMS 310+

Digitrip RMS 310+ electronic trip units are available with Eaton Series G circuit breakers JG, LG, NG and RG, as well as Series C FD, KD, LD and MDL circuit breakers.

Digitrip 310+ trip units are equipped with an integrated Ir switch that allows users to modify the continuous current rating of the breaker without having to replace a rating plug. This provides further flexibility for coordination in systems. The trip units may be used in 50 Hz or 60 Hz applications. The Digitrip 310+ offers true rms sensing, is front adjustable and has an optional local display of current and cause of trip.

Curve Shaping

When selectively coordinated systems are called for, Digitrip RMS 310+ will provide a cost-effective solution for a variety of applications.

The standard Digitrip RMS 310+ includes an adjustable short time pickup setting encompassing an $I^2t$ ramp function that provides the basic LS curve shaping function.

Digitrip 310+ trip units also include selectable long time delay ($I_t$) and pickup settings ($I_p$). A rating plug is not required.

The optional Digitrip RMS 310+ LSI and LSIG provide additional flat response short time delay adjustments and an instantaneous setting to provide LSI curve shaping capability.

Digitrip RMS 310+ LSG and LSIG units are available with ground fault pickup and flat response ground fault delay. Ground fault alarm options are available with trip and no trip functionality as a means to notify users of a ground fault condition with the option to maintain the breaker online.

Digitrip RMS 310+ trip units can effectively coordinate with both sophisticated upstream power breakers as well as downstream thermal-magnetic breakers, making Digitrip RMS 310+ trip units the cost-effective reliable choice for selectively coordinated systems.

Thermal Memory

All Digitrip RMS trip units incorporate a long delay. Thermal memory prevents the system from cumulative overheating due to repeated overcurrent events that may occur in quick succession.

Field Testing

A field test kit is available for Digitrip RMS 310+ trip units.

Arcflash Reduction Maintenance Mode (ARMS)

ARMS is an available feature on KD, LG, LD, MDL, NG and RG frames with 310+ electronic trip units. This feature increases worker safety by providing an accelerated instantaneous trip unit to reduce arc flash. Additionally, LG, NG and RG frames with the ARMS feature include a fully adjustable instantaneous setting.

Digitrip RMS 610 and 910

Digitrip RMS 610 and 910 trip units are available with Eaton R-Frame circuit breakers 800 through 2500 amperes. Digitrip 610 and 910 trip units provide unparalleled system protection with the added convenience of a local display.

Curve Shaping

Digitrip RMS 610 and 910 trip units are available with up to nine curve shaping choices achieved by adjusting up to seven switches on the front of the unit for optimum system coordination. Maximum curve shaping flexibility is provided by dependent long and short delay adjustments that are long delay pickup ($I_L$) based, depicted on the front of the unit by the blue portion of the time-current curve.

Additional coordination capability can be provided by utilizing the short delay and ground fault zone selective interlocking features available on these trip units.

System Diagnostics

Digitrip RMS 610 and 910 models of trip units provide long delay, short delay, instantaneous, and ground fault cause of trip LEDs on the front of the unit. Their display shows a magnitude of trip information, as well as remote signal contacts, for improved system alarming.

System Monitoring

Digitrip 610 and 910 trip units have the capability to monitor phase currents, as well as neutral or ground currents. This information is displayed on a large digital display mounted on the unit.

Digitrip RMS 910 trip units can also provide the user with power and energy monitoring capability. Peak power demand, present power demand, and total energy, as well as forward and reverse energy can be monitored with this unit.

Digitrip RMS 910 trip units have the additional capability of monitoring line-to-line voltage, as well as system power factor. Both parameters are displayed in the digital display window and are supported by LEDs to indicate which parameter is being displayed.

Harmonics Monitoring

Digitrip RMS 910 trip units are capable of displaying values of current harmonics in the digital display window. Percentage of harmonic content can be monitored for each phase, up to the 27th harmonic. Additionally, a total harmonic distortion value can be calculated and displayed.

Communications

Digitrip RMS 910 units have built-in communications options to allow all protection, monitoring, and control information to be transmitted back to a central location via the Eaton PowerNet™ system.

Field Testing

Integral field testing capability is provided on all 610 and 910 trip units. No additional test set is needed to perform both trip and no trip field testing.

Iₚ = Rating plug rating.
Iₚ = Long delay setting.

1. 310+ trip units have selectable settings instead of a rating plug.
2. 310+ trip units have adjustable long delay times of 2–24 seconds, except NG 310+ for 800 A frame, for which it is 2–14 seconds.
3. 310+ details are included by frame in Pages V4-T2-44 (JG), V4-T2-62 (LG), V4-T2-72 (NG), and V4-T2-83 (RG).
4. JG/LG: 2X–14X (Iₚ); LG: 2X–8X (Iₚ); RG: 2X–9X (Iₚ); 2500 ampere RG-Frame 2X–6X% x (Iₚ).
5. LS, LS, LG and ALSI and ALSIG 310+ trip units include an independently adjustable instantaneous (Iₚ) setting.
6. LS, LSG only.
7. Not to exceed 1200 amperes.

**Notes**

- 125 amperes is the maximum UL and CSA rating for the EG.
- 630 amperes is a UL or CSA listed rating. 600 amperes is the maximum UL and CSA listed rating for the LG.
- Breaker type C, U and X are current limiting per UL 489.
- EG breaker rated 600/347 Vac.
- Two poles in series.
- 125 Vdc only for single-pole breakers.
- Not suitable for DC application. Four-pole ground fault not available.

| Utilization category | A | A | A | A | A | A | A |

**Notes**
1. NG 1600 ampere frame is not UL or CSA listed.
2. Not KEMA-KEUR listed.
3. IEC 60947-2 H.5 Annex H is not KEMA-KEUR tested.
4. Not suitable for DC application. Four-pole ground fault not available.
5. RG 310+ are interchangeable with the exception of: FROM not ground fault equipped TO ground fault equipped
6. Available only on Digitrip 910 trip units.

### Rated short-circuit breaking capacity (DC) Not for circuit breakers for motor protection (Time constant t = 10 ms)

| Two conducting paths in series | 42 kA max. | 42 kA max. | 42 kA max. | 8 | 8 |
| NEMA (time constant t = 8 ms) | Two conducting paths in series | 42 kA max. | 42 kA max. | 42 kA max. | 8 | 8 |

### Notes

1. 125 amperes is the maximum UL and CSA rating for the EG.
2. 630 amperes is not a UL or CSA listed rating. 600 amperes is the maximum UL and CSA rating for the LG.
3. 1200 amperes is the maximum UL and CSA rating for the NG.
4. Thermal overload release set to the lower value.
5. Thermal overload release set to the upper value.
6. Not suitable for DC switching.

### EG-Frame (15–125 Amperes)

**Product Description**

EG breaker is HACR rated.
Catalog Number Selection
This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

Series G—EG-Frame (15–125 Amperes)

Notes
① Cannot be UL rated.
② Available only as 125 and 160 A sizes.
### Product Selection

**Complete Breaker (Includes Frame, Trip Unit, Standard Terminals and Mounting Hardware) IC Rating at 415/480 Volts**

**Notes**

1. 16, 32, 63A are not UL listed ratings.
2. Adjustable thermal is not UL listed.
3. Change the fourth digit to 7 for 100% neutral protection. Neutral is on LH side.
4. Molded case switches may open above 1250 A.

EG-Frame circuit breakers and molded case switches have line and load terminals as standard equipment.

Insert collar enclosing conductor as shown. Locate nut on top of conductor and tighten securely with screw and washer.

Caution: Collar must surround conductor.

Insert collar enclosing conductor and center on extrusion. Tighten securely with screw and washer. Endcap kits are used on the E-Frame breaker line side to connect busbar or similar electrical connections. Includes hardware.

Notes

(1) Standard line and load terminals.
(2) Four-pole kit with four terminals.
(3) Includes hardware.
Control Wire Terminal Kit

<table>
<thead>
<tr>
<th>Control Wire Terminal Kit</th>
<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Control wire terminal kit</td>
<td>5652B38G01</td>
</tr>
<tr>
<td>Package of 12—priced individually</td>
<td></td>
</tr>
</tbody>
</table>

For use with steel or stainless steel standard line and load terminals only.

Interphase Barriers

<table>
<thead>
<tr>
<th>Interphase Barriers</th>
<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interphase barriers</td>
<td>EIPBK</td>
</tr>
<tr>
<td>Package of 12—priced individually</td>
<td></td>
</tr>
</tbody>
</table>

The interphase barrier is available for extended insulation between circuit breaker poles. Specify quantity when ordering.

Base Mounting Hardware—DIN Rail Mounting

<table>
<thead>
<tr>
<th>Base Mounting Hardware—DIN Rail Mounting</th>
<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>DIN rail adapter—single-pole</td>
<td>EF1DIN</td>
</tr>
<tr>
<td>DIN rail adapter—two-pole</td>

</tr>
<tr>
<td>DIN rail adapter—three- or four-pole</td>
<td>EF34DIN</td>
</tr>
<tr>
<td>Metal DIN rail adapter—three-pole</td>
<td>EGGDDIN</td>
</tr>
</tbody>
</table>

Metric base mounting hardware is included with a circuit breaker or molded case switch. (Included with breaker.) If required separately, order S/N 8703C80G08.

Note: English mounting hardware kit can be supplied separate. Catalog number is BMHE #6–32 x 3 inches for two-, three- and four-pole. Single-pole mounting hardware metric order 8703C80G11. English hardware 8703C80G12. Both sold in quantities of 100.

Terminal Shields

The terminal shield is available for line terminal areas in three- and four-pole circuit breakers. Special terminal shields are also available for use when an electrical (solenoid) operator is mounted on the circuit breaker. The standard style number by pole for each terminal shield is for a package of 10 and is priced per each package. Special terminal shields are packaged individually.

Terminal Shields—IP30 Protection

<table>
<thead>
<tr>

<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>EFTS3K</td>
</tr>
<tr>
<td>4</td>
<td>EFTS4K</td>
</tr>
</tbody>
</table>

Terminal End Covers (Gas Barrier)
The terminal end cover is available for three-pole circuit breakers only. Two conductor opening sizes are available. Specify quantity (one per circuit breaker) when ordering.

<table>
<thead>
<tr>
<th>Terminal End Covers</th>
<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Conductor Opening Diameter</td>

<tr>
<td>6.35 (0.25)</td>
<td>EEC3K</td>
</tr>
<tr>
<td>10.41 (0.41)</td>
<td>EEC4K</td>
</tr>
</tbody>
</table>

Multiwire Connectors
Field-installed multiwire connectors for the load side (OFF) end terminals. They are used to distribute the load from the circuit breaker to multiple devices without the use of separate distribution terminal blocks.

Multiwire lug kits include mounting hardware, terminal shield insulators and tin-plated aluminum connectors to replace three mechanical load lugs. UL listed as used on the load side (OFF) end.

EG-Frame Multiwire Connectors Ordering Information (Package of 3)

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

### Notes

1. DC ratings apply to substantially non-inductive circuits.
2. IEC only.
3. Two-pole circuit breaker, or two poles of three-pole circuit breaker.
4. Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds minimum at 42 kA.
5. Current limiting per UL 489.
2.2 Molded Case Circuit Breakers
Series G

EG-Frame With Earth Leakage Module

EG-Frame With Current Limiter Module
JG-Frame (63–250 Amperes)

Product Description

JG breaker is HACR rated.

### Notes

1. EC–EN 60947-2 only. Adjustment is 0.8 and 1.0.
2. 9 for 0–100% neutral protection. Neutral is on LH side.
3. Molded case switches will trip above 2500 amperes.

Notes
(i) For use on a three-pole breaker used in a four-wire system if ground fault protection for the neutral is required.
(ii) Neutral protection 4 = 0%, 7 = 100% electronic trip unit neutral protection is not adjustable.
(iii) Four-pole breakers with LSG and LSIG trip units are only available with 0% neutral protection.

**Note**

1. Required for four-wire systems if neutral protection is required.
Accessories Selection Guide and Ordering Information

JG-Frame

Load and Line Terminals

<table>
<thead>
<tr>
<th>Terminal Body Material</th>
<th>Wire Type</th>
<th>Metric Wire Range mm²</th>
<th>AWG Wire Range/Number of Conductors</th>
<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stainless steel Cu</td>
<td>25–185</td>
<td>4–350</td>
<td>TA250FJ</td>
<td></td>
</tr>
<tr>
<td>Aluminum Cu/Al</td>
<td>10–185</td>
<td>6–350</td>
<td>TA250FJ</td>
<td></td>
</tr>
</tbody>
</table>

JG-Frame circuit breakers include aluminum terminals TA250FJ as standard. When optional stainless steel only terminals are required, order by catalog number.

Endcap Kits

<table>
<thead>
<tr>
<th>Number of Poles</th>
<th>Metric Number</th>
<th>Imperial Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>FJ3RTWK</td>
<td>FJ3RTDK</td>
</tr>
<tr>
<td>4</td>
<td>FJ4RTWK</td>
<td>FJ4RTDK</td>
</tr>
</tbody>
</table>

Endcap kits are used on J250-Frame breaker to connect busbar or similar electrical connections. Includes hardware.

Control Wire Terminal Kit

<table>
<thead>
<tr>
<th>Description</th>
<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Package of 14 (priced individually)</td>
<td>FJCWTK</td>
</tr>
</tbody>
</table>

For use with aluminum or copper terminals only.

Rear Fed Terminals

<table>
<thead>
<tr>
<th>Maximum Amperes</th>
<th>Wire Size Range AWG Cu</th>
<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>250</td>
<td>#4–350 kcmil</td>
<td>TA250JGRF</td>
</tr>
</tbody>
</table>

Rear fed terminals allow the cable to connect to the breaker from the back instead of the top. Terminal shields or interphase barriers are included with each rear fed terminal kit (depending on frame size). When catalog number starts with a 3, it indicates a kit with three terminals in each kit. Catalog number beginning with a TA indicates one terminal.

Base Mounting Hardware

Base mounting hardware is included with a circuit breaker or molded case switch. (Included with breaker.) If required separately, order 66A2546G02.

Terminal Shields IP30

<table>
<thead>
<tr>
<th>Location</th>

<td>FJTS4K</td>
</tr>
</tbody>
</table>

Interphase Barriers

<table>
<thead>
<tr>
<th>Number of Poles</th>
<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>FJIPBK</td>
</tr>
<tr>
<td>4</td>
<td>FJIPBK4</td>
</tr>
</tbody>
</table>

Multiwire Connectors

Field-installed multiwire connectors for the load side (OFF) end terminals are used to distribute the load from the circuit breaker to multiple devices without the use of separate distribution terminal blocks.

Multiwire lug kits include terminal shield, mounting hardware, insulators and tin-plated aluminum connectors to replace three mechanical load lugs. UL listed as used on the load side (OFF) end.

</table>

Notes

① Individually packed.
② Standard line and load.
③ Individually priced.
## Accessories

### Allowable Accessory Combinations
Different combinations of accessories can be supplied, depending on the types of accessories and the number of poles in the circuit breaker.

### JG-Frame Accessories

</tbody>
</table>

### Protection

| Ordering options     | LS, LSI, LSG, LSIG |
| Artiflash reduction maintenance system or maintenance mode | No |
| Interchangeable trip unit | Yes |
| High load alarm (suffix B20) | Yes |
| Ground fault alarm with trip (suffix B21) | Yes |
| Ground fault alarm, no trip (suffix B22) | Yes |
| Zone selective interlocking (suffix ZG) | LSI, LSIG |
| Cause of trip indication | Yes |
| Thru-cover accessories | Yes |

### Notes

- DC ratings apply to substantially non-inductive circuits.
- Two-pole circuit breaker, or two poles of three-pole circuit breaker.
- Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds minimum at 22 kA.
- Current limiting per UL 489.
- B2x suffixes cannot be combined with B2x suffixes.

2.2 Molded Case Circuit Breakers
Series G

Catalog Number Selection
This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

Series G—LG-Frame (250–630 Amperes)

- **Frame**: L, G
- **Performance**: E 18 35 35 65, S 25 50 50 85, H 35 65 70 100, C 50 100 100 200, U 85 150 150 200, X 65 200 200 200
- **Amperes**: 250, 300, 350, 400, 500, 600, 630
- **Number of Poles**: 3 = Three, 4 = Four—Neutral 0% protected, 6 = Four—Neutral 100% protected, 7 = Four—Neutral 100% protected, 8 = Four—Neutral 0–60% protected, 9 = Four—Neutral 0–100% protected
- **Rating**: Blank = 80% rated, C = 100% rated (for LGE, LGS and LGH only)
- **Terminals**: M = Metric end caps, E = Imperial end caps
- **Mounting Hardware**: G = Line/load standard, W = Without terminals

**Features (ETU Only)**
- **Trip Unit**
  - AA = Adj. adj., thermal-magnetic
  - FA = Fixed adj., thermal-magnetic
  - KS = Molded case switch
  - 33 = 310+ electronic LS
  - 32 = 310+ electronic LSI
  - 35 = 310+ electronic LSG
  - 36 = 310+ electronic LSIG
  - 38 = 310+ electronic ALSI
  - 39 = 310+ electronic ALSIG
  - NN = Frame only (630 A only; no trip unit)

**Features (ETU Only)**
- **Blank**: No feature
- **B20**: High load alarm
- **B21**: Ground fault alarm, with trip
- **B22**: Ground fault alarm, no trip
- **ZG**: Zone selective interlocking

**Notes**
- Box features cannot be combined with other Box features.
- B21 and B22 available with LSG and LSIG trip units.
## Product Selection

### Complete Breaker (Includes Frame, Trip Unit, Standard Terminals and Mounting Hardware)

#### LG-Frame—630 Amperes (600 Amperes UL, CSA)

</table>

### Notes

1. Replace suffix “G” with “W” for no line and load terminals.
2. For two-pole applications, use two outer poles.
3. Neutral protection is indicated by the fourth character: 4 = 0%, 7 = 100%, 8 = adjustable 0–60% and 9 = 0–100%. Neutral is on LH side.
4. 320/630 amperes is not a UL or CSA listed rating. 600 amperes is the maximum UL and CSA rating for the LG.
5. Adjustable thermal units are typically used in IEC markets and are not UL or CSA listed.

### Notes

1. Molded case switches will trip above 6300 amperes.
2. For two-pole applications, use two outer poles.
3. 630 amperes is not a UL or CSA listed rating. 600 amperes is the maximum UL and CSA rating for the LG.
4. Adjustable thermal, adjustable magnetic trip units are typically used in IEC markets and are not UL or CSA listed.
5. Neutral protection is indicated by the third character: 4 = 0%, 7 = 100%, 8 = adjustable 0–60% and 9 = 0–100%.
6. 100% rated frame.

Notes
- Required for four-wire systems if neutral protection is desired.
- 630 amperes is not a UL or CSA listed rating. 600 amperes is the maximum UL and CSA listed rating for the LG.
- Neutral protection: 4 = 0%, 6 = 60%, 7 = 100%. Electronic trip unit neutral protection is not adjustable.
- Four-pole LSIG and LSIG trip units are only available with 0% neutral protection.
IC Rating at 415/480 V
Complete LG Breakers with Electronic Trip Unit (Includes Frame, Trip Unit, Standard Terminals and Mounting Hardware)

See 310+ adjustability specifications on Page V4-T2-62.

**IC Rating: 35 kAIC at 415 and 480 Vac**

**Notes**

1. Required for four-wire systems if neutral protection is required.
2. 630 amperes is not a UL or CSA listed rating. 600 amperes is the maximum UL and CSA listed rating for the LG.
LG Electronic Breaker with Arcflash Reduction Maintenance System

Series G LG circuit breakers are available with the Arcflash Reduction Maintenance System™ integrated into the electronic trip units helping to improve safety by providing a simple and reliable method to reduce fault clearing time. The Arcflash Reduction Maintenance System unit utilizes a separate analog trip circuit that provides faster interruption times than the standard (digital) “instantaneous” protection. Work locations downstream of a circuit breaker with an Arcflash Reduction Maintenance System unit can have a significantly lower incident energy level, reducing arc flash potential to the system.

</tr>
</tbody>
</table>

Rear fed terminals allow the cable to connect to the breaker from the back instead of the top. Terminal shields or interphase barriers are included with each rear fed terminal kit (depending on frame size). When catalog number starts with a 3, it indicates a kit with three terminals in each kit. Catalog number beginning with a TA indicates one terminal.

Multiwire Connectors

Field-installed multiwire connectors for the load side (OFF) end terminals are used to distribute the load from the circuit breaker to multiple devices without the use of separate distribution terminal blocks.

Multiwire lug kits include terminal shield, mounting hardware, insulators and tin-plated aluminum connectors to replace three mechanical load lugs. UL listed as used on the load side (OFF) end.

LG-Frame Multiwire Connectors Ordering Information

</tr>
</tbody>
</table>

Notes

1 Includes LTS3K (three-pole) or LTS4K (four-pole) terminal covers.
2 Standard terminal included with complete breaker.
3 Included in TA631L, T631L, TA632L kits listed above.
**Terminals and Terminal Cover for the LG Breaker—Includes LTS3K (Three-Pole) or LTS4K (Four-Pole) Terminal Covers**

*Note:* Extended terminal covers add 2.13 inches (54.0 mm) to breaker length.
# Accessories

## Base Mounting Hardware

Base mounting hardware is included with a circuit breaker or molded case switch. (Included with breaker.) If required separately, order 66A4560G03.

## Allowable Accessory Combinations

Different combinations of accessories can be supplied, depending on the types of accessories and the number of poles in the circuit breaker.

**Protection**

| Ordering options                          | LS, LSI, LSG, LSIG, ALSI, ALSIG |
| Arct flash reduction maintenance system (or maintenance mode) | Yes |
| Interchangeable trip unit                 | Yes            |
| High load alarm (suffix B20)              | Yes            |
| Ground fault alarm with trip (suffix B21) | Yes            |
| Ground fault alarm, no trip (suffix B22)  | Yes            |
| Zone selective interlocking (suffix ZG)   | LSI, LSIG, ALSI, ALSIG |
| Cause of trip indication                  | Yes            |
| Thru-cover accessories                    | Yes            |

**Notes**

1. DC rating apply to substantially non-inductive circuits.
2. Two-pole circuit breaker, or two poles of three-pole circuits.
3. Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds minimum at–kA.
5. B2x suffixes cannot be combined with B2x suffixes.

**Notes**

1. DC rating apply to substantially non-inductive circuits.
2. Two-pole circuit breaker, or two poles of three-pole circuits.
3. Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds minimum at 4 kA.
4. Three-poles in series. 750 Vdc ratings available (four-pole in series, not UL listed). Contact Eaton.
5. IEC rating is 300 kA at 240 Vac.
6. Current limiting per UL 489.
2.2 Molded Case Circuit Breakers

Series G

LG-Frame With Earth Leakage Module

![Diagram of Molded Case Circuit Breakers Series G LG-Frame With Earth Leakage Module]
NG-Frame (320–1200 Amperes)

Product Description
- All Eaton NG-Frame circuit breakers are suitable for reverse feed use
- All NG-Frame circuit breakers are HACR rated
### Molded Case Circuit Breakers

#### Series G

**Catalog Number Selection**

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

Notes
1. For AC use only.
2. Non-MCCBs are suitable for 40 °C or 50 °C applications. Order suffix V3 to eliminate standard 40 °C labeling.
3. Required for four-wire systems if neutral protection is desired. Sold separately.
4. Neutral 0% protected. NG, neutral in right pole; GN, neutral in left pole.
5. Neutral 100% protected (denoted by 7 in digit four); no neutral protection available with LSG or LSIG trip units.
6. Neutral 0%/60%/100% adjustable protection (denoted by 9 in digit four).
7. Non-UL listed NG 1250 with 1250 ampere trip unit is also available.
8. For two-pole applications, use outer poles of three-pole molded case switch.
### Type NGH High Interrupting Capacity—$U_e$ Max. 690 Vac, 65 kA $I_{cu}$ at 480 Vac or 415 Vac

<tr>
<td>Three-pole both ends English</td>
<td>5104A24G02</td>
</tr>
</tbody>
</table>

**Keeper Nut**
Not required on NG-Frame. Terminals are threaded.

**Handle Extension**
Included with breaker. Additional handle extensions are available.

<table>
<thead>
<tr>
<th>Description</th>
<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single handle extension</td>
<td>HEX5</td>
</tr>
</tbody>
</table>

**Interphase Barriers**
The interphase barriers provide additional electrical clearance between circuit breaker poles for special termination applications. Barriers are high dielectric insulating plates that are installed in the molded slots between the terminals. (Field installation only.)

<table>
<thead>
<tr>
<th>Description</th>
<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interphase barriers ★</td>
<td>IPB5</td>
</tr>
</tbody>
</table>

**Notes**
- ★ Single terminals individually packed.
- ★★ Required for four-wire systems if neutral protection is desired. Sold separately.
- ★★ Metric hardware included with breaker.
- ★★★ Included as standard on 100% rated 1200 A breakers only.
## 2.2 Molded Case Circuit Breakers

### Accessories

#### Allowable Accessory Combinations

Different combinations of accessories can be supplied, depending on the types of accessories and the number of poles in the circuit breaker.

Product Description

- Eaton’s RG-Frame circuit breakers are available as a frame (which includes trip unit), rating plug and terminals.
- All R-Frame circuit breakers are suitable for reverse feed use.

Notes

¹ For SCR application, use 2000 ampere frame.
² Order terminals separately. Mounting hardware not included.
³ Ground fault equipped trip units available with remote indicating panel. Add “R” to catalog number, for example, “RGH316035RW.”
⁴ Required for four-wire systems if neutral protection is desired. Sold separately.
⁵ No neutral protection available on four-pole breakers with LSG or LSIG trip units.
⁶ Unprotected left pole neutral. Add “P” to catalog number for 100% protected left pole neutral, add “E” for 60% protected, for example, “RGH416033PW,” “RGH416033EW.”
RG MCCBs have English threading on line and load conductors. Use suffix “M” for metric threading.
### 100 kA at Both 415 Vac and 480 Vac

**Type RGC with Digitrip 310+ Very High Interrupting Capacity — Uₐ Maximum 690 Vac, 100 kA Iₑ at 415 Vac**

#### Notes

① For SCR application, use 2000 ampere frame.
② Order terminals separately. Mounting hardware not included.
③ Ground fault equipped trip units available with remote indicating panel. Add “R” to catalog number, for example, “RGH316035RW.”
④ Required for four-wire systems if neutral protection is desired. Sold separately.
⑤ No neutral protection available on four-pole breakers with LSG or LSIG trip units.
⑥ Unprotected left pole neutral. Add “P” to catalog number for 100% protected left pole neutral, add “E” for 60% protected, for example, “RGH416033PW,” “RGH416033EW.”
⑦ Molded case switch will trip above 17,500 amperes.

RG MCCBs have English threading on line and load conductors. Use suffix “M” for metric threading.
Type RG with Digitrip 610 and 910

Circuit Breaker Frame Including Digitrip RMS 610 and 910 Electronic Trip Unit with Rating Plugs

Order as Individual Component—Catalog Number

L – Adjustable Long Delay Pickup (Iₜ) with Adjustable Long Delay Time
S – Adjustable Short Delay Pickup with Adjustable Short Delay Time (I²t or Flat Response)
I – Adjustable Instantaneous Pickup
G – Adjustable Ground Fault Pickup with Adjustable Ground Fault Time Delay (I²t or Flat Response)

Accessories Selection Guide and Ordering Information

Line and Load Terminals
R-Frame circuit breakers use Cu/Al terminals as standard and copper only terminals as an option. Specify if factory installation is required. Must have terminals for 100% rated and or freeze testing requirements.

</tbody>
</table>

Notes

1. Order one per pole—single terminals individually packed.
2. Order one TA2000RD kit per three poles. Catalog number includes bus connection, terminals and hardware for either line side or load side of three-pole breaker.
3. For use with 2500 A Frame. Do not order separately unless for replacement purposes. Included in breaker carton when 2500 A frame is ordered.

RG MCCBs have metric threading on line and load conductors. Use RD MCCBs if imperial threading is required.

TA2000RD Wire Terminal

Note: Order one TA2000RD M kit per three poles. Catalog number includes bus connection, terminals and hardware for either line side or load side of three-pole breaker.
Accessories

**Allowable Accessory Combinations**

Different combinations of accessories can be supplied, depending on the types of accessories and the number of poles in the circuit breaker.

**Notes**

- UL listed for use with Eaton Motor Starters.
- Motor FLA ranges are typical. The corresponding trip setting is at 13 times the minimum FLA value shown.
- Where a 13 times setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.
- For DC applications, actual trip levels are approximately 40% higher than values shown.

**Notes**

- UL listed for use with Eaton Motor Starters.
- 800 and 1200 ampere, 600 Vac maximum motor circuit protectors are available as Series C HMCP product.
**Motor Protector Circuit Breakers (MPCB)**

**Product Description**
- Eliminates need for separate overload relay

**Application Description**
- Can be used with contactor to eliminate need for overload relay and still create manual motor control
- Meets requirement for motor branch protection, including:
  - Disconnecting means
  - Branch circuit short circuit protection
  - Overload protection

**Features and Benefits**
- Phase unbalance protection
- Phase loss protection
- Hot trip/cold trip
- High load alarm
- Pre-detection trip relay option
- Class 10, 15, 20, 30 protection

**Standards and Certifications**
- IEC 60947-2
- UL 489 100% rated
- UL 508
- CSA C22.2

For pre-trip alarm option, order Style Number 5721B31G02.
30 mA Ground Fault (Earth Leakage) Module

Product Description

Eaton offers three- and four-pole 30 mA ground fault (earth leakage) protection modules for Series G E-, J- and L-frame molded case circuit breakers (MCCBs). Separate UL listed and IEC rated devices are available for each frame.

The modules are bottom mounted and are available for each frame circuits up to:

- EG: 125 amperes
- JG: 150 (UL), 160 (IEC) or 250 amperes
- LG: 400, 600 (UL) or 630 (IEC) amperes

The module is completely self contained, including a current sensor, relay and power supply inside the device. Current pickup settings are selectable from 0.03 to 10 amperes for all devices, except for the UL listed module, for which settings are selectable from 0.03 to 30 amperes. Time delays are also selectable from Instantaneous to 1.0 second for pickup settings of 0.10 amperes and above. The current pickup setting of 0.03 amperes defaults to an Instantaneous time setting regardless of the time dial’s position.

Two alarm contacts are included with each device, which can be wired externally for remote indication. Both of these are also indicated by an LED on the front of the device:

1. 50% pre-trip: alarms when the earth leakage current reaches 50% of the set pickup setting value.
2. 100% after trip: alarms when the breaker reaches the set pickup setting value and the breaker trips.

LG-Frame With Earth Leakage Module
2.2 Molded Case Circuit Breakers
Series G

Current Limiting Circuit Breaker Modules

Product Overview
Power demand continues to grow in new and existing facilities. To meet increased demand, larger utility supplies, spot networks and large facility transformers are installed. The increased capacity of the electrical source results in increased fault currents in excess of 100 kA short-circuit protection. Eaton manufactures non-fused current limiting modules with interrupting capacities up to 200 kA at 600 Vac or 70 kA at 690 Vac. Unlike fused current limiters with a one-time use, a current limiter module provides an automatic reset of the module after a short-circuit event. Resetting the molded-case circuit breaker is the only action required to restore critical power to the system; there is no time wasted with sourcing the correct replacement fuses or module to bring system back online.

Product Description
The current limiting breaker modules use a unique contact design to enhance the system protection similar to that of the circuit breaker. When high short-circuit current is flowing through the contacts of these modules, the design results in very high interrupting capacities and improved current limiting characteristics.

Application Description
High-performance breakers are most commonly applied when very high fault levels are available and with applications where the current limiting capability is used upstream of the final load to limit current. Typical loads include lighting, power distribution, and motor control applications.

Features and Benefits
Superior system protection:
- Auto reset improves system uptime and eliminates the need for finding replacement parts
- No fuses to replace, reducing the overall cost of ownership and the waste created by fuses
- Overloads, by using inverse time current tripping characteristics of the molded-case circuit breaker
- Low-level short circuits, by using instantaneous and/or short-time delay tripping characteristics of the molded-case circuit breaker
- High-level short circuits, by using ultra-high-speed, blow-apart contacts of the current limiting module in series with the circuit breaker contacts
- Let-through currents, by improved opening speed of the contacts, the resultant rapid rise of arc voltage introduces impedance into the system

Standards and Certifications
- IEC 60947-2
- UL 489
- CSA C22.2

JG-Frame With Current Limiter Module
High Instantaneous Circuit Breaker for Selective Coordination

Product Description
Eaton’s Electrical Sector introduces new high-magnetic withstand molded case circuit breakers, specifically designed for critical operations and selective coordination requirements. The high-magnetic withstand LHH and NHH frames continue the legacy of circuit breaker innovation for which Eaton is recognized throughout the world. The LHH and NHH breakers are equipped with 125 to 400 ampere trip units with high-magnetic capability. This design enables the breakers to withstand up to 90 times rated current before opening under short-circuit conditions.

The LHH and NHH circuit breakers incorporate a higher level of instantaneous pickup, thus allowing for higher current levels of selective coordination. Standard molded case circuit breakers typically are furnished with a magnetic pickup or electronic instantaneous adjustment or instantaneous override set at 10 times (10x) the continuous trip rating. circuit breaker will open, while the line-side LHH and/or NHH circuit breakers remain closed, thus providing continuity of power to the other critical loads supplied by the LHH or NHH circuit breakers.

Benefits of Using the LHH and NHH Molded Case Circuit Breakers
Customer expectations and codes are driving product development to protect customers’ critical operations. NEC® 2005 and 2008 requires circuits with elevators, emergency systems, legally required standby systems, health care essential systems and critical operation power systems to be selectively coordinated. Simply stated, only the closest protective device directly protecting the circuit having an overcurrent (overload or fault) condition should open.

Features, Benefits and Functions
Eaton’s new LHH and NHH molded case circuit breakers are furnished with a higher level of magnetic pickup or electronic instantaneous settings as indicated in table on Page V4-T2-103. These higher levels of magnetic pickup and electronic instantaneous values in turn allow the system designer to obtain selective coordination at fault current levels up to these higher ratings. Greater values of selective coordination are available based on manufacturer tested combinations using the LHH and NHH as line-side breakers and standard breakers as load-side devices. Refer to IA01200002E to determine the maximum fault values that selective coordination achieves. When the line-side and load-side molded case circuit breaker trip ratings are chosen to coordinate in the overload range, they also can be selectively coordinated in the fault range up to the values listed in the table on Page V4-T2-103 or IA01200002E. For overcurrents protected by circuit breakers on the load-side of the LHH or NHH, only the effected load-side

### Proven Technology and Performance

The LHH is based on the Series G L-Frame circuit breaker, sharing the same small footprint and field-fit accessories as the L-Frame breaker. The NHH is based on the Series G N-Frame circuit breaker and shares the same footprint and accessories as the N-Frame breaker. NHH accessories must be factory installed.

The LHH incorporates a thermal-magnetic trip unit with fixed thermal and fixed magnetic settings. The NHH has an OPTIM™ electronic trip unit with LSI adjustment capabilities. The instantaneous setting is adjustable from 1000–4000 A or may be turned off to default to the frame override of 14,000 A. A hand-held OPTIMizer must be used with the NHH to adjust short-time delay and instantaneous, however, the long delay pickup is fixed and cannot be adjusted.

The LHH and NHH breakers are available in Eaton’s panelboards and switchboards.

### Technical Data and Specifications

- **Three-pole**
- 65 kAIC at 480 Vac
- 125–400 ampere LHH
- 150–350 ampere NHH
- **Trips units:**
  - LHH—thermal-magnetic
  - NHH—LSI electronic trip unit
- No rating plugs required
- Factory-sealed breakers
- LHH uses same internal and external accessories as standard Series G L-Frame circuit breaker
- NHH uses same internal and external accessories as standard Series G N-Frame circuit breaker

2.2 Molded Case Circuit Breakers
Series G

Special Features and Accessories

Eaton’s molded case circuit breakers are designed to provide circuit protection for low voltage distribution systems. They are described by NEMA as, “... a device for closing and interrupting a circuit between separable contacts under both normal and abnormal conditions,” and furthermore as, “... a breaker assembled as an integral unit in a supporting and enclosing housing of insulating material.” The National Electrical Code (NEC) describes them as, “A device designed to open and close a circuit by non-automatic means, and to open the circuit automatically on a predetermined overload of current, without injury to itself when properly applied within its rating.”

So designed, Eaton circuit breakers protect conductors against overloads and conductors and connected apparatus, such as motors and motor starters, against short circuits. In low voltage distribution systems, there are many varied applications of molded case circuit breakers. Eaton offers the most comprehensive family of molded case circuit breakers in the industry.

This section of circuit breakers includes:
- Thermal-magnetic trip breakers
- Electronic rms trip breakers
- Molded case switches
- Motor circuit protectors
- Current limiting breakers
- Special application breakers

Modified Breakers

Eaton breakers can be ordered with internal accessories installed. These modified breakers will be subject to an addition charge.

Special Calibration

Special non-UL listed calibrations are available for certain ambient temperatures other than 40 °C and for frequencies other than 50/60 Hz or DC. Reduced interrupting ratings will apply for 400 Hz applications.

- Add suffix H01 to breaker catalog number for 400 Hz rating

50 °C Calibration

Note: Breakers equipped with electronic trip units can operate reliably in ambient temperatures of 50 °C. Add suffix “V3” to NG MCCBs to remove standard 40 °C labeling.

Add suffix “V” to catalog number for complete thermal magnetic breaker when ordering listed ampere ratings for breakers to be used in 50 °C ambient. 50 °C ambient MCCBs are not UL listed.

Contact Eaton for availability.
**Moisture-Fungus Treatment**
All Eaton circuit breaker cases are molded from glass-polyester, which does not support the growth of fungus. Any parts that are susceptible to the growth of fungus will require special treatment.

**Order by description:**
- Add suffix J01 to breaker catalog number

**Freeze-Tested Circuit Breakers**
The circuit breakers may be ordered with freeze testing. This option uses special lubrication and mechanical operation is verified at –40 °C.
- Add suffix F01 to catalog number –57 °F, F02 –30 °F

**Marine Applications**
E- to R-Framed circuit breakers can be supplied to meet the following marine specifications:
- U.S. Coast Guard CFR 46; ABS—American Bureau of Shipping; IEEE 45; DNV; and Lloyds

These specifications generally require molded case circuit breakers to be supplied with 50 °C ambient, and plug-in adapter kits. When plug-in adapter kits are used, no terminals need be supplied (switchboard applications).

Circuit breakers can also be supplied to meet UL 489 Supplement SA (Marine use) and UL 489 Supplement SB (Naval Use).

UL 489 Supplement SA applies to vessels over 65 feet (19.8m) in length.

Requirements include 40 °C ambient calibration, special labeling, and no use of aluminum conductors or terminals. (No 50 °C.)
- Add suffix H08
  Or you can choose to add 50°C ambient but then there is no “UL” mark.
- Add suffix VH08

UL 489 Supplement SB requires partial 50 °C ambient calibration, vibration testing, special nameplating and no use of aluminum conductors or terminals. Eaton chooses to always fully calibrate to 50 °C ambient. ("Naval" labeled per UL but no “UL” mark due to 50 °C label.)
- Add suffix VH09

**Certified Test Reports**
Eaton breakers can be ordered with certified test reports at the time of order entry. Test report documents the thermal and magnetic or electronic tripping characteristics of the individual breaker. Breaker and test report must be ordered together. Add suffix 12 to breaker catalog number and enter separate line item on order for certified test report.

**Standards and Certifications**
Molded case circuit breakers are designed to conform with the following standards:
- Underwriters Laboratories Inc., Standard UL 489, molded case circuit breakers and circuit breaker enclosures
- National Electrical Manufacturers Association (NEMA) Standards Publication No. AB1-1993, molded case circuit breakers
- Australian Standard AS 2184, molded case circuit breakers
- British Standards Institution Standard BS 4752: Part 1, switchgear and control gear Part 1: circuit breakers
- Canadian Standards Association (CSA) Standard C22.2 No. 5, service entrance and branch circuit breakers
- International Electrotechnical Commission Recommendations IEC 60947-2, circuit breakers
- Japanese T-Mark Standard molded case circuit breakers
- Swiss Electro-Technical Association Standard SEV 157-1, safety regulations for circuit breakers
- Union Technique de l’Electricite Standard NF C 63-120, low voltage switchgear and control gear circuit breaker requirements
- Verband Deutscher Elektrotechniker (Association of German Electrical Engineers) Standard VDE 0660, low voltage switchgear and control gear, circuit breakers

Conformance with these standards satisfies most local and international codes, assuming user acceptability and simplified application.

Molded case circuit breakers equal or exceed Federal Specification Classification W-C-375b requirements for the particular class associated with the circuit breaker frame being considered.

Open breakers do not have service entrance ratings. Service entrance rating is part of the enclosure.

2.2 Molded Case Circuit Breakers
Series G

Internal Accessories

**Alarm Lockout**
The alarm switches operate when the circuit breaker is tripped by a short circuit or overcurrent, but also when it is tripped by a shunt trip or undervoltage release.

**Auxiliary Switches**
Auxiliary switches are used for signaling and control purposes. The various functions of the auxiliary switches (changeover) are shown on Page V4-T2-108.

**Shunt Trips**
The shunt trip is used for remote tripping.
The coil of the shunt trip is rated only for short-time operation.
It is not permissible with the circuit breaker open to apply a continuous opening command to the shunt trip in order to prevent the breaker from closing. This means that interlocking circuits with continuous commands may not be set up with shunt trips.

**Undervoltage Releases**
The circuit breaker cannot be closed until the undervoltage release is energized. If the release is not energized, the circuit breaker can only perform an idle switching operation.
Frequent idle switching actions should be avoided as they shorten the endurance of the circuit breaker.

Digitrip 310+ Electronic Trip Unit Accessories

**Cause of Trip Display/Remote Mount Cause of Trip Display**
The Cause of Trip Display can be field-installed on any Digitrip RMS 310+ trip unit. The device provides breaker information through an LCD screen, such as cause of trip, phrase current, ground current and low loads.
The display is ideal for troubleshooting common trips such as ground fault, long delay, and instantaneous/short delay.
The DIGIVIEW version will provide a local display at the breaker without additional wiring by connecting directly onto the trip unit. The DIGIVIEWR06 version has a 6 foot cable that allows users to mount the display on the outside of an enclosure door and connect to the trip unit that is contained inside the enclosure.
The DIGIVIEWR06 is NEMA 3R rated.

**Cause of Trip LED Module**
The Cause of Trip LED Module can be field-installed on any Digitrip RMS 310+ trip unit. The device provides a cause of trip indication via LED. The Cause of Trip LED Module connects directly onto the trip unit. When the breaker trips, the module indicates the cause of trip (long delay, short delay, instantaneous and ground) via LED indication. The module is reset after the breaker is reset.

**Electronic Portable Test Kit**
The electronic portable test kit provides a means to complete field tests using secondary injection on all 310+ trip units. The same test kit is also capable of secondary injection testing on Magnum and Series NRX low voltage power circuit breakers’ 520 and 1150 trip units.

#### Notes
- LH cavity not available for EG frame with earth leakage module.
- All accessories mount in the RH cavity which will accept one each of shunt trip, UVR, auxiliary switch and alarm switch.
- 380–600 Vdc, 50/60 Hz.
- 24 Vdc only use UVH5LP03K (NG) UVH6RP03K (RG) for 24 Vac.
Technical Data and Specifications

Note: Gold-plated contacts are well suited for switching low voltages and currents. Lead wires on accessories containing gold-plated contacts are marked with a yellow stripe.

Series G Motor Operators

Motor Operators

Product Description
Eaton’s motor operator mechanism enables local and remote ON, OFF and reset switching of a circuit breaker. The motor operator is mounted on the circuit breaker cover within the dimensions of the circuit breaker.

The robust motor operators offer various voltages to maximize customer flexibility. Standard load transfer switching can be accomplished through the use of two circuit breakers fitted with motor operators and a mechanical interlock.
Features, Benefits and Functions

The motor operator provides special features for ease of customer use and status indication.

- The motor operator allows the circuit breaker to be opened, closed or reset remotely.
- The motor operator contains a motor connected to a cam drive mechanism. The cam drives a slide mechanism to operate the circuit breaker handle.
- Internal limit switches and relays are used to control motor operation to prevent overdriving the circuit breaker handle and motor overload conditions.
- A key is provided to manually operate the circuit breaker.
- A special pull-out locking mechanism provides a method for padlocking the circuit breaker handle in the OFF position.
- The locking device will accept three padlock shackles with a maximum diameter of 1/4-inch (6.4 mm) each.
- The cover provides visual status of the circuit breaker: ON, OFF or TRIPPED. A PUSH-TO-TRIP button allows the user to manually trip the breaker.

Standards and Certifications

The motor operators are UL and CSA listed, and CE marked.

Plug-In Blocks

Product Description
Plug-in adapters simplify installation and front removal of circuit breakers. Plug-ins are available for rear connection applications on three- and four-pole circuit breakers. Trip on drawout interlock kits are included. Stabs for EG, JG and LG plug-ins rotate 90° for flexible installation. Use terminal shields for IP30 protection.

Note
1 Included with plug-in block. Trips the breaker when breaker is removed from plug-in block.
Drawout Cassettes

Product Description
The drawout cassette is available for use with JG, LG and NG, three- and four-pole breakers. The cassettes consist of two separate components: the movable mechanism, which attaches to the breaker, and the stationary mechanism, which houses in the cassette. For the JG, LG and NG drawout cassettes, all necessary parts for installation are included in the one catalog number.

Features
Features of the drawout cassettes for the JG, LG and NG include:

- **Trip on drawout**—breaker will trip if it is in the ON position when withdrawn from the cassette
- **Secondary terminal block**—the drawout cassettes include a secondary terminal block for easier access when wiring low voltage accessories, including shunts and undervoltage releases

The drawout mechanism has three primary positions:

- **Connected**—the breaker is fully connected to the primary stabs and secondary contacts
- **Disconnected**—both the primary stabs and the secondary contacts are disconnected
- **Withdraw**—the breaker can be removed from the cassette

2.3 Molded Case Circuit Breakers
Series C

Product Overview
Eaton’s molded case circuit breakers are designed to provide circuit protection for low voltage distribution systems. They are described by NEMA as, “... a device for closing and interrupting a circuit between separable contacts under both normal and abnormal conditions,” and furthermore as, “... a breaker assembled as an integral unit in a supporting and enclosing housing of insulating material.” The National Electrical Code (NEC) describes them as, “A device designed to open and close a circuit by non-automatic means, and to open the circuit automatically on a predetermined overload of current, without injury to itself when properly applied within its rating.”

So designed, Eaton circuit breakers protect conductors against overloads and conductors and connected apparatus, such as motors and motor starters, against short circuits. In low voltage distribution systems, there are many varied applications of molded case circuit breakers.

Eaton offers the most comprehensive family of molded case circuit breakers in the industry. This section of circuit breakers includes:

- Thermal-magnetic trip breakers
- Electronic rms trip breakers
- Molded case switches
- Motor circuit protectors
- Current limiting breakers
- Special application breakers

Modified Breakers
Eaton breakers can be ordered with internal accessories installed. These modified breakers will be subject to an addition charge.

Special Calibration
Special non-UL-listed calibrations are available for certain ambient temperatures other than 40 °C and for frequencies other than 50/60 Hz or DC. Reduced interrupting ratings will apply for 400 Hz applications.

50 °C Calibration
Add suffix V to catalog number for complete breaker, listed above, when ordering listed ampere ratings for breakers to be used in 50 °C ambient. (No price adder.) (No UL label.)

Moisture-Fungus Treatment
All circuit breaker cases are molded from glass-polyester which does not support the growth of fungus. Any parts which are susceptible to the growth of fungus will require special treatment.

Freeze-Tested Circuit Breakers
The circuit breakers may be ordered with freeze testing. This option uses special lubrication and mechanical operation is verified at –40 °C.

Marine Applications
E- to R-Frame circuit breakers can be supplied to meet the following marine specifications:

- U.S. Coast Guard CFR 46; ABS—American Bureau of Shipping; IEEE 45; DNV; Lloyds; and ABS/NVR

These specifications generally require molded case circuit breakers to be supplied with 50 °C ambient, and plug-in adapter kits. When plug-in adapter kits are used, no terminals need be supplied (switchboard applications).

Circuit breakers can also be supplied to meet UL 489 Supplement SA (Marine use) and UL 489 Supplement SB (Naval Use). UL 489 Supplement SA applies to vessels over 65 feet (19.8 m) in length. Requirements include 40 °C ambient calibration, special labeling, and no use of aluminum conductors or terminals. (No 50 °C.)

- Suffix H08
- Suffix VH08

Or you can choose to add 50 °C ambient but then there is no “UL” mark.

- Suffix VH09

UL 489 Supplement SB requires partial 50 °C ambient calibration, vibration testing, special nameplating and no use of aluminum conductors or terminals. Eaton chooses to always fully calibrate to 50 °C ambient. (“Naval” labeled per UL, and UL now allows 50 °C label here.)

- Suffix VH09
Certified Test Reports

Eaton breakers can be ordered with certified test reports at the time of order entry. Test report documents the thermal and magnetic or electronic tripping characteristics of the individual breaker. Breaker and test report must be ordered together. Add suffix 12 to breaker catalog number and enter separate line item on order for certified test report.

Standards and Certifications

Molded case circuit breakers are designed to conform with the following standards:

- Underwriters Laboratories Inc., Standard UL 489, molded case circuit breakers and circuit breaker enclosures
- National Electrical Manufacturers Association (NEMA) Standards Publication No. AB1-1993, molded case circuit breakers
- Australian Standard AS 2184, molded case circuit breakers
- British Standards Institution Standard BS 4752: Part 1, switchgear and control gear Part 1: circuit breakers
- Canadian Standards Association (CSA) Standard C22.2 No. 5, service entrance and branch circuit breakers
- International Electrotechnical Commission Recommendations IEC 60947-2, circuit breakers
- Japanese T-Mark Standard molded case circuit breakers
- Swiss Electro-Technical Association Standard SEV 157-1, safety regulations for circuit breakers
- Union Technique de l’Electricite Standard NF C 63-120, low voltage switchgear and control gear circuit breaker requirements
- Verband Deutscher Elektrotechniker (Association of German Electrical Engineers) Standard VDE 0660, low voltage switchgear and control gear, circuit breakers

Conformance with these standards satisfies most local and international codes, assuming user acceptability and simplified application.

Molded case circuit breakers equal or exceed Federal Specification Classification W-C-375b requirements for the particular class associated with the circuit breaker frame being considered.

Open breakers do not have service entrance ratings. Service entrance rating is part of the enclosure.

**Notes**

- N.I.T.U. is non-interchangeable trip unit and I.T.U. is interchangeable trip unit.
- Two-pole circuit breaker, or two poles of three-pole circuit breaker at 250 Vdc.
- Current limiting.
G-Frame (15–100 Amperes)

Product Description

- All two- and three-pole circuit breakers are of the common trip type. On all three-phase delta (240 V) Grounded B phase applications, refer to Eaton
- Single-pole circuit breakers, 15 and 20 amperes. Switching duty rated (SWD) for fluorescent lighting applications
- All G-Frame circuit breakers are suitable for reverse feed use
- HACR rated
2.3 Molded Case Circuit Breakers

Series C

Catalog Number Selection
This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

**Notes**

1. 15 through 70 ampere circuit breakers only.
2. Single-pole breakers can be applied in DC systems from 15 through 70 ampere; 80 through 100 ampere devices are not suitable for DC application.
3. Uses 0.190–32 screw type clamp terminals.
4. Add suffix HID for High Intensity Discharge (HID) applications. 15 and 20 ampere, single-pole are SWD rated.
5. 15 and 20 ampere, single-pole are SWD rated.
Type GHCGFEP Cable-In/Cable-Out 30 mA Industrial Ground Fault Circuit Protectors (15–100 Amperes)

Product Description
- 15–60 amperes, 277 V, 50/60 Hz
- Operational voltage 240–305 V

Standards and Certifications
These circuit breakers meet the requirements of UL 489 and UL 1053.

### Special Purpose GHC Circuit Breakers (15–100 Amperes)

**Product Description**
Eaton’s Type GHC circuit breakers have binding head screw-type terminals on line and load side. These circuit breakers with screw-type terminals (0.190–32) will be marked “Special purpose breaker not for general use.” To order this special breaker, use the catalog number from the tables on this page.

**Product Selection**

| Type GHC Thermal-Magnetic Circuit Breakers with Non-Interchangeable Trip Units |
|----------------------------------|-----------------|-----------------|-----------------|
| Continuous Ampere Rating at 40 °C | Single-Pole Catalog Number | Two-Pole Catalog Number | Three-Pole Catalog Number |
| 277 Vac Maximum, 125 Vdc Maximum | GHC1025D | GHC2025D | GHC3025D |
| 480Y/277 Vac Maximum, 125/250 Vdc Maximum | GHC1030D | GHC2030D | GHC3030D |
| 480Y/277 Vac Maximum, 125/250 Vdc Maximum | GHC1035D | GHC2035D | GHC3035D |
| 480Y/277 Vac Maximum, 125/250 Vdc Maximum | GHC1040D | GHC2040D | GHC3040D |
| 480Y/277 Vac Maximum, 125/250 Vdc Maximum | GHC1045D | GHC2045D | GHC3045D |
| 480Y/277 Vac Maximum, 125/250 Vdc Maximum | GHC1050D | GHC2050D | GHC3050D |
| 480Y/277 Vac Maximum, 125/250 Vdc Maximum | GHC1060D | GHC2060D | GHC3060D |
| 480Y/277 Vac Maximum, 125/250 Vdc Maximum | GHC1070D | GHC2070D | GHC3070D |
| 480Y/277 Vac Maximum, 125/250 Vdc Maximum | GHC1080D | GHC2080D | GHC3080D |
| 480Y/277 Vac Maximum, 125/250 Vdc Maximum | GHC1090D | GHC2090D | GHC3090D |
| 480Y/277 Vac Maximum, 125/250 Vdc Maximum | GHC1100D | GHC2100D | GHC3100D |

| Type GHB and GHC Thermal-Magnetic Circuit Breakers with Non-Interchangeable Trip Units for HID Lighting Applications |
|----------------------------------|-----------------|
| Type | Continuous Ampere Rating at 40 °C |
| Cable-in | 15 |
| | 20 |
| Bolt-on | 15 |
| | 20 |

**Notes**
- Single-pole breakers can be applied in DC systems from 15 through 70 amperes; 80 through 100 amperes devices are not suitable for DC application.
- Use two outside poles.
## F-Frame (10–225 Amperes)

**Product Description**

- All Eaton’s F-Frame circuit breakers are HACR rated.
- All circuit breakers 10 through 30 amperes are suitable for HID (high intensity discharge) use.
- All F-Frame circuit breakers are suitable for reverse feed use.

### Typical F-Frame Breaker

**F-Frame Breaker with Electronic Trip Unit**

### Catalog Number Selection
This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

#### FD-Frame Circuit Breakers with Thermal-Magnetic Trip Unit Technology

**Circuit Breaker Type**
- EHD
- FDB
- FD
- HFD
- FDC

**Number of Poles**
- 1 = 1 pole
- 2 = 2 poles
- 3 = 3 poles
- 4 = 4 poles

**Trip Amperes**
- 010
- 015
- 020
- 025
- 030
- 035
- 040
- 045
- 050
- 060
- 070
- 080
- 090
- 100
- 110
- 125
- 150
- 175 (FD, HFD, FDC, two-, three-, four-pole only)
- 200 (FD, HFD, FDC, two-, three-, four-pole only)
- 225 (FD, HFD, FDC, two-, three-, four-pole only)

**Suffix**
- E = 100% protected (four-pole only) neutral pole
- EH = 50% protected (four-pole only)
- K = High magnetic molded case switch
- L = Line and load terminals
- S = Stainless steel terminals
- V = 50 °C calibration
- W = Without terminals
- Y = Line terminals only
- Z = Aluminum terminals (≤100 amperes)

---

**EDC 3 200 L**

**Circuit Breaker Type**
- EDB
- EDS
- ED
- EDH
- EDC

**Number of Poles**
- 2 = 2 poles
- 3 = 3 poles

**Trip Amperes**

**FD-Frame Circuit Breakers with 210+ Electronic Trip Unit Technology**

**HFDE 3 225 22 L**

- **Performance at 480 Vac**
  - FDE = 35 kAIC
  - HFDE = 65 kAIC
  - FDCE = 100 kAIC

- **Number of Poles**
  - 3 = 3 poles

- **Trip Units**
  - 100
  - 150
  - 225

- **Trip Unit Features**
  - W = Without terminals
  - L = Line and load terminals
  - Blank = Load side terminals only

**FD-Frame Circuit Breakers with 310+ Electronic Trip Unit Technology**

**HFDE 3 225 32 ZG W**

- **Performance at 480 Vac**
  - FDE = 35 kAIC
  - HFDE = 65 kAIC
  - FDCE = 100 kAIC

- **Number of Poles**
  - 3 = 3 poles

- **Trip Units**
  - 080
  - 160
  - 225

- **Trip Unit Features**
  - ZG = Zone selective interlocking
  - Blank = No option

- **Trip Units**
  - 32 = 310+ LSI
  - 33 = 310+ LS
  - 35 = 310+ LSG
  - 36 = 310+ LSIG

### Notes

1. For 210+ trip unit, 150 A not available with LSI trip unit; entire range is covered by 100 A and 225 A frames.
2. Contact the product line for availability.
2.3 Molded Case Circuit Breakers

Series C

Molded Case Switches

Eaton’s molded case switches are used as compact switches in applications requiring high current switching capabilities. Molded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Molded case switches are listed in accordance with Underwriters Laboratories Standard UL 489.

Molded Case Switches

Note
Molded case switches will open above 1800 amperes.
Accessories Selection Guide and Ordering Information

**Line and Load Terminals**
Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. Except as noted, terminals comply with Underwriters Laboratories Standards UL 486A and UL 486B. Unless otherwise specified, F-Frame circuit breakers are factory equipped with load terminals only.

**Ordering Information**
F-Frame circuit breakers and molded case switches have load terminals only as standard equipment. When standard line-end terminals (same as standard load-end terminals) are required, add Suffix L to the circuit breaker catalog number. When non-standard or optional line and/or load terminals are required, order by style number. Specify if factory installation is required.

</tbody>
</table>

**Notes**

1️⃣ Use on FDE, HFDE and FDCE electronic trip only.
2️⃣ Not for use with ED, EDH, EDC breakers.
3️⃣ Includes terminal shield kit. Adds approximately 3 inches (76.2) to breaker height. Available for use on three-pole breaker only.
4️⃣ Replacement use only.

<td>3.00</td>
</tr>
</tbody>
</table>

Notes:
1. DC ratings apply to substantially non-inductive circuits.
2. Two-pole circuit breaker, or two poles of three-pole circuit breaker.
3. Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds minimum at 22 kA.
4. Electronics available on three-pole only, no DC rating for FDE, HFDE, FDC.
6. Check with Eaton for availability.
7. Neutral sensor required for four-wire systems if neutral protection is desired; sold separately.

### Notes

- **Ig** = gound fault pickup (amperes) for LS, LSG, LSIG trip units.
- **Ig** = ground fault pickup (amperes) for LS, LSG, LSIG trip units.
- Maintenance Mode not available for KD, LD, MDL, LG, NG and RG.
- Maintenance Mode not available for FD frames. It is available for KD, LD, MDL, LG, NG and RG.
- Low voltage alarm with trip (suffix B21) for LS, LSG, LSIG trip units.
- Fixed instantaneous override (all 210+) for LS, LSG, LSIG trip units.
- Thru-cover accessories not available for LS, LSG, LSIG trip units.
- Test kit available for LS, LSG, LSIG trip units.

Approximate Shipping Weight Lbs (kg)
J-Frame (70–250 Amperes)

Product Description

- All Eaton’s J-Frame circuit breakers are HACR rated
- J-Frame circuit breakers are available as individual components (frame, trip unit, terminals), or factory assembled complete breakers
- J-Frame circuit breakers with non-interchangeable trip units are suitable for reverse feed use
2.3 Molded Case Circuit Breakers
Series C

Catalog Number Selection
This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

Circuit Breaker/Frame

Trip Unit

Suffix
- C = Non-aluminum terminals
- F = Frame only
- K = High magnetic molded case switch
- V = 50 °C calibration
- W = Without terminals
- X = Load side terminals only
- Y = Line side terminals only

Suffix
- T = Trip unit
- thermal-magnetic
- fixed thermal
- adj. magnetic
- V = 50 °C calibration
- (thermal-magnetic trip units only)

### Molded Case Switches

Eaton’s molded case switches are used as compact switches in applications requiring high current switching capabilities. Molded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Molded case switches are listed in accordance with Underwriters Laboratories Standard UL 489.

#### Notes

- Individually packed.
- Molded case switches may open above 2500 amperes.
Accessories Selection Guide and Ordering Information

**Line and Load Terminals**
Eaton’s line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories Standards UL 486A and UL 486B and CSA Standard C22.2 No. 65, or Electrical Bulletin 1165.

Unless otherwise specified, J-Frame circuit breaker line and load terminals are shipped separately for field installation. The bottom of the standard TA250KB terminal contains a recess that is positioned over the J-Frame circuit breaker terminal conductor.

**Ordering Information**
J-Frame circuit breakers use Cu/Al terminals as standard. When optional copper-only terminals are required, order by catalog number. Specify if factory installation is required.

---

K-Frame (70–400 Amperes)

Product Description

- All Eaton K-Frame circuit breakers are HACR rated.
- K-Frame circuit breakers are available as individual components (frame, trip unit, terminals), or factory assembled complete breakers.
- K-Frame circuit breakers with non-interchangeable trip units are suitable for reverse feed use.
2.3 Molded Case Circuit Breakers

Series C

Catalog Number Selection
This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

Notes
@ Frames are the same for thermal-magnetic or 310+ electronic trip units, e.g., KD3400F or HKD3400F.
Ampere rating available with electronic trip unit only.
2.3 Molded Case Circuit Breakers

Series C

K-Frame with 310+ Electronic Trip Unit Technology

310+ Circuit Breakers

KDB 3 400 F T36 ZG W

- **Performance at 480 Vac:**
  - KDB: 35 kAIC
  - HKDB: 65 kAIC
  - CKDB: 35 kAIC
  - CHKDB: 100% rated

- **Number of Poles:**
  - 3 = Three-pole

- **Ampere Rating:**
  - 125
  - 250
  - 400

- **Frame Designation:**
  - F

- **Feature:**
  - Blank = No feature
  - B20 = High load alarm
  - B21 = Ground fault alarm, with trip
  - B22 = Ground fault alarm, no trip
  - ZG = Zone selective interlocking

- **Terminals:**
  - W = No terminals
  - L = Line and load

310+ Electronic Trip Units

KES 3 400 LSIG ZG

- **Trip Unit Type:**
  - KES

- **Number of Poles:**
  - 3 = Three-pole
  - 4 = Four-pole

- **Ampere Rating:**
  - 125
  - 250
  - 400

- **Feature:**
  - Blank = No feature
  - B20 = High load alarm
  - B21 = Ground fault alarm, with trip
  - B22 = Ground fault alarm, no trip
  - ZG = Zone selective interlocking

K-Frame with OPTIM Trip Unit Technology

OPTIM Circuit Breakers

KD 3 125 T5 7 W

- **Circuit Breaker/Frame Type:**
  - KD
  - HKD
  - CKD
  - CHKD

- **Number of Poles:**
  - 3 = Three-pole

- **Circuit Breaker/Frame Ampere Rating:**
  - 125
  - 250
  - 400

- **Trip Model:**
  - T5 = Model 550
  - T10 = Model 1050

- **Trip Type:**
  - Z = LSI
  - 6 = LSIG
  - 7 = LSIA

- **Suffix:**
  - W = Without terminals

Notes:

- ☞ Not available in four-pole configurations.
- ☞ Frames are the same for thermal-magnetic or 310+ electronic trip units, e.g., KD3400F, HKD3400F, etc.

### Notes

1. For AC use only.
2. Required for four-wire systems if neutral protection is desired.
3. Included with LSG and LSIG trip units.
4. Trip unit includes protected neutral pole. Use corresponding three-pole trip unit if protected neutral pole is not required.
5. Fully rated neutral pole protection is standard. For 50% rated protection on neutral pole, add Suffix E to four-pole trip unit catalog number.

### 100% Rated Types CKD and CHKD Electronic Circuit Breakers

The NEC allows the breaker to be rated at 100% of its frame size in an assembly, provided that 90 °C wire is applied at the 75 °C ampacity. All 100% rated circuit breakers have electronic trip units.

### 100% Rated Types CKD and CHKD Electronic Circuit Breakers—Three-Pole

Molded Case Switches

Eaton’s molded case switches are used as compact switches in applications requiring high current switching capabilities. Molded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Molded case switches are listed in accordance with Underwriters Laboratories Standard UL 489.

100% Rated Digitrip OPTIM 550 Electronic Circuit Breakers with Interchangeable Rating Plug

Order as individual components: breaker frame (which includes trip unit), rating plug, terminals.

100% Rated Digitrip OPTIM 550 Electronic Circuit Breakers with Interchangeable Rating Plug

Circuit Breaker Frame Only

- L – Adjustable Long Delay Pickup (I_r) with Adjustable Long Delay Time (I^2t or I_t Response)
- S – Adjustable Short Delay Pickup with Adjustable Short Delay Time (I^2t or Flat Response)
- I – Adjustable Instantaneous Pickup
- G – Adjustable Ground Fault Pickup with Adjustable Ground Fault Time (I^2t or Flat Response)
- A – Adjustable Ground Fault Alarm with Adjustable Ground Fault Time (I^2t or Flat Response)

Notes

1. Long delay I^2t response selection limits short delay time to flat response.
2. Zone interlocking, PowerNet, or both features can be added at the factory by adding suffixes ZG, PN or ZGP respectively to above catalog number (refer to Page V4-T2-293).

Accessories Selection Guide and Ordering Guide

**Line and Load Terminals**

Eaton’s line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories Standards UL 486A and UL 486B and CSA Standard C22.2 No. 65, or Electrical Bulletin 1165. Unless otherwise specified, K-Frame circuit breaker line and load terminals are shipped separately for field installation.

**Ordering Information**

K-Frame circuit breakers use Cu/Al terminals as standard. When optional copper or Cu/Al terminals are required, order by catalog number. Specify if factory installation is required.

### Legend

- ■ Applicable in indicated pole position
- ❏ May be mounted on left or right pole—not both
- ● Accessory available/modification available

### Notes

2. Shunt trip and UVR cannot be mounted in right poles on KES or OPTIM trip units. Standard internal accessories cannot be mounted in right pole on any K-Frame OPTIM trip units. Special OPTIM ground fault and zone interlock accessories are available for field installation in the right pole of K-Frame 550 OPTIM trip units. Factory installed 2a/2b and bell/aux are available for factory installation. K-Frame breakers equipped with OPTIM 1050 trip units include aux-bell alarm in the right pole.

**Notes**

2. MTST230V applies to 100–230 Vac.
3. Included with all LD LSG and LSLG trip units and breakers.
4. Includes 6 ft cable for remote mounting; NEMA 3R rated.
5. Two-pole circuit breaker or two outside poles of three-pole circuit breaker.
6. Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds minimum at 22 kA.

2.3 Molded Case Circuit Breakers
Series C

L-Frame (125–600 Amperes)

Product Description

- All Eaton L-Frame circuit breakers are HACR rated
- L-Frame circuit breakers are available as individual components (frame, trip unit, terminals), or factory assembled complete breakers
- L-Frame circuit breakers with non-interchangeable trip units are suitable for reverse feed use

Standards and Certifications

- CE marked
### Catalog Number Selection

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

</table>

**Suffix**

- C = Copper terminals
- F = Frame only (600 A only)
- K = High magnetic molded case switch
- V = 50 °C (thermal-magnetic trip units only)
- W = Without terminals
- X = Load side terminals only
- Y = Line side terminals only

**Note**

Frames are the same for thermal-magnetic or 310+ electronic trip units, e.g., LD3600F, HLD3600F, etc.
**2.3 Molded Case Circuit Breakers**

**Series C**

### LD-Frame with 310+ Electronic Trip Unit Technology

**310+ Circuit Breakers**

100% Rated Types CLD, CHLD and CLDC Electronic Circuit Breakers with Interchangeable Trip Units
The NEC allows the breaker to be rated at 100% of its frame size in an assembly, provided that 90 °C wire is applied at the 75 °C ampacity. All 100% rated circuit breakers have electronic trip units. Order as individual components: breaker frame, trip unit and terminals. See 310+ adjustability specifications on Page V4-T2-182.

#### Molded Case Switches

**Molded Case Switches**

Eaton’s molded case switches are used as compact switches in applications requiring high current switching capabilities. Molded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Molded case switches are listed in accordance with Underwriters Laboratories Standard UL 489.

<table>

Three-Pole Ultra High Interrupting Capacity Current Limiting 600 Vac Rated 100 kAIC at 480 Vac
Accessories Selection Guide and Ordering Information

Line and Load Terminals
Eaton’s line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories Standards UL 486A and UL 486B and CSA Standard C22.2 No. 65M. Unless otherwise specified, L-Frame circuit breaker line and load terminals are shipped separately for field installation.

The wire connecting terminal is secured with two pan-head, slotted screws and lockwashers that can be checked for the correct torque loading or retightened from the front of the circuit breaker before installation of the conductors. (Applies to all styles.) The circuit breaker line/load terminal conductors are positioned in the conducting holes in the wire connecting terminal and are secured with recessed socket screws that are tightened to the correct torque loading from the front of the circuit breaker.

**Legend**

- ■ Applicable in indicated pole position
- ❏ May be mounted on left or right pole—not both
- ● Accessory available/modification available

**Notes**

① Two-pole breaker supplied in three-pole frame. Current carrying parts omitted from center pole.

② Refer to Eaton for appropriate neutral pole accessory combinations.

③ OPTIM model 1050 is factory sealed and does not have the right pole space available for accessories.

④ Shunt trip and UVR cannot be mounted in right poles on LES or OPTIM trip units. Standard non-tripping internal accessories can be mounted in the left or right poles of LES and 550 OPTIM trip units.

</tbody>
</table>

**Notes**
- ☯ Two-pole breaker supplied in three-pole frame. Current carrying parts omitted from center pole.
- ☯ Refer to Eaton for appropriate neutral pole accessory combinations.
- ☯ MTST230V applies to 100–230 Vac.
- ☯ Included with all LD LSG and LSG trip units and breakers.
- ☯ Includes 8 ft cable for remote mounting; NEMA 3R rated.

## Protection

- Ordering options: LS, LSI, LSG, LSI, ALSI, ALSIG
- Arcflash Reduction Maintenance System: Remote enabled on ALSI, ALSIG
- Interchangeable trip unit: Yes
- High load alarm (suffix B20): Yes
- Ground fault alarm with trip (suffix B21): LSG, LSI, ALSI
- Zone selective interlocking (suffix Z3): LSI, LSG, ALSI
- Cause of trip indication: Yes (via TRIP-LED or DIGIVIEW)
- Thru-cover accessories: No

100% Rated Types CMDL and CHMDL Electronic Circuit Breakers with Interchangeable Trip Units

The NEC allows the breaker to be rated at 100% of its frame size in an assembly, provided that 90 °C wire is applied at the 75 °C ampacity. All 100% rated circuit breakers have electronic trip units. Order as individual components: breaker frame, trip unit and terminals. See 310+ adjustability specifications on Page V4-T2-220.

Notes

① For AC use only.
② Required for four-wire systems if neutral protection is desired.
③ Included with LSG and LSIG trip units or breakers.
④ Factory sealed, suitable for reverse feed application. CMDLB and CHMDLB are also available.
## Molded Case Circuit Breakers

### Series C

#### Molded Case Switches

Eaton’s molded case switches are used as compact switches in applications requiring high current switching capabilities. Molded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Molded case switches are listed in accordance with Underwriters Laboratories Standard UL 489.

</table>

**Notes**

- MDLB and HMDLB are suitable for reverse feed applications.
- Molded case switch may trip above 6000 amperes.
Accessories Selection Guide and Ordering Information

**Line and Load Terminals**
M-Frame circuit breakers use Cu/Al terminals as standard. When optional copper or Cu/Al terminals are required, order by catalog number. Specify if factory installation is required.

**Notes**

1. MTST230V applies to 100–230 Vac.
2. Included with all LD LSG and LSIG trip units and breakers.
3. Includes 6 ft cable for remote mounting; NEMA 3R rated.
4. Utilization Category A circuit breakers.
5. Two-pole or two poles of three-pole circuit breaker. Thermal-magnetic trip units only, MDL, HMDL breakers with electronic trip unit are not DC rated.
6. Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds at 22 kA.

|                                                                                     | position 5 640  |
|                                                                                     | position 6 800  |

| \( \text{I}_{\text{G}} \times \text{I}_{\text{R}} \) = ground fault delay time (milliseconds) (LS, LSIG, ALSI, ALSIG) | Position 1 Inst |
|                                                                                     | position 2 120  |
|                                                                                     | position 3 300  |

- **Independently adjustable Instantaneous (\( \text{I}_{\text{R}} \)) setting**: Fixed 2000

#### Notes

- B2x suffixes cannot be combined with B2x suffixes.
- Not available for MDL. Independently adjustable \( \text{I}_{\text{R}} \) setting available in LG, NG, and RG ALSI and ALSIG trip units.
### Dimensions and Weights

**Dimensions in Inches (mm)**

#### MD Frame

<table>

**Note**

° Thermal-magnetic only.
N-Frame (400–1200 Amperes)

Product Description

- All Eaton N-Frame circuit breakers are suitable for reverse feed use.
- All N-Frame circuit breakers are HACR rated.
Catalog Number Selection
This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

Circuit Breaker/Frame

</tbody>
</table>

**Notes**

- Long delay I₄ₜ response selection limits short delay time to flat response.
- Zone interlocking, PowerNet, or both features can be added at the factory by adding suffixes ZG, PN or ZGP respectively to above catalog number.
- Includes conductor extension kit, which increases breaker length 3.75 on each end. Terminal ordered separate.

#### Notes

- Long delay I²t response selection limits short delay time to flat response.
- One Form C auxiliary switch one Form C bell (trip) alarm switch supplied with breaker as standard.
- Factory sealed.
- Includes conductor extension kit, which increases breaker length 3.75 on each end. Terminal ordered separate.
- Neutral is in right pole.

Molded case switch will trip above 14,000 amperes.

For UL listed, series tested molded case switch application data, refer to Eaton.
Accessories Selection Guide and Ordering Information

Line and Load Terminals—Ordering Information

N-Frame circuit breakers use Cu/Al terminals as standard. When optional copper or Cu/Al terminals are required, order by catalog number. Specify if factory installation is required.

**Notes**
- Utilization Category A circuit breakers.
- 100% rated breakers.
- 800 amperes maximum rating.
- Successfully tested at 300 kAIC, although UL recognizes maximum of 200 kAIC at 240 Vac.
- Successfully tested at 75 kAIC, although UL recognizes maximum of 65 kAIC at 600 Vac.

R-Frame (800–2500 Amperes)

Product Description

- Eaton R-Frame circuit breakers are available as a frame (which includes trip unit), rating plug and terminals.
- All R-Frame circuit breakers are suitable for reverse feed use.
### Catalog Number Selection

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

#### Circuit Breaker/Frame

### 100% Rated Digitrip RMS 910 Circuit Breakers

The NEC allows the breaker to be rated at 100% of its frame size in an assembly, provided that 90 °C wire is applied at 75 °C ampacity. Order as individual components: breaker frame (which includes trip unit) and rating plug.

2. Molded case switch may trip above 17,500 amperes.
2.3 Molded Case Circuit Breakers

Series C

Accessories Selection Guide and Ordering Information

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories Standards UL 486A and UL 486B and CSA C22.2 No. 65M. Unless otherwise specified, R-Frame circuit breaker line load terminals are shipped separately for field installation.

Ordering Information

R-Frame circuit breakers have Cu/AI terminals as standard and Cu only terminals as an option. Specify if factory installation is required.

Notes

① Catalog Number includes bus connection, terminals and hardware for either line side or load side of three-pole breaker.
② For use with 100% rated 1600 A and 2000 A frame. Do not order separately unless for replacement purposes. Included in breaker carton when 100% rated device is ordered.
③ For use with 2500 A frame. Do not order separately unless for replacement purposes. Included in breaker carton when 2500 A breaker is ordered.

2.3 Molded Case Circuit Breakers
Series C

Motor Circuit Protectors

Product Description
Designated as Eaton’s Types GMCP and HMCP, the instantaneous-only motor circuit protector (MCP) is available in ratings from 3 A to 1200 A for motor starter sizes 0 through 8.

An innovative design of internal components allows higher MCP-starter combination interrupting ratings. The MCP is marked to permit proper electrical application within the assigned equipment ratings.

Standards and Certifications
The MCP is designed to comply with the applicable requirements of Underwriters Laboratories Standard UL 489, Canadian Standards Association Standard C22.2 No. 5.1, and International Electrotechnical Commission Recommendations IEC 157-1.

The MCP is a recognized component (UL File E7819) and complies with the applicable requirements of Underwriters Laboratories Standard UL 489. It is also designed to comply with the applicable requirements of Canadian Standards Association Standard C22.2 No. 5.1, International Electrotechnical Commission Recommendations IEC 157-1, and nameplates bear the CE marking.

UL

Listed

Note: Interrupting ratings are dependent on starter it is used with.
Catalog Number Selection
This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

</table>

**Notes**

Motor FLA ranges are typical. The corresponding trip setting is at 13 x the minimum FLA value shown. Where a 13 x setting is required for an intermediate FLA value, alternate Cam settings and/or MCP ratings should be used.

All GMCP 3–63A come with line and load steel body terminals for Cu only wire. Refer to Page V4-T2-122 under Optional Terminal Types.

UL recognized and CSA approved.

**Notes**

1. Only one accessory may be installed in GMCP.
2. LH only.
3. RH only.
4. For use with standard 35 mm DIN rail such as, 35 x 7.5 or 15 mm per DIN EN50022.
5. Suitable for use on two- or three-pole G-Frame.
6. No UVR available on GMCP.

Notes

1. Motor FLA ranges are typical. The corresponding trip setting is at 13 x the minimum FLA value shown. Where a 13 x setting is required for an intermediate FLA value, alternate Cam settings and/or MCP ratings should be used.

2. For DC applications, actual trip levels are approximately 40% higher than values shown.

3. Settings above 130 amperes are for special applications. NEC Article 430.110(a) requires the ampere rating of the disconnecting means to be not less than 115% of the motor full load ampere rating.

HMCP 5–100 A come with line and load steel body terminals, 3T100FB. HMCP 150A come with line and load steel body terminals, 3T150FB.

### Notes

1. Motor FLA ranges are typical. The corresponding trip setting is at 13 x the minimum FLA value shown. Where a 13 x setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.
2. For DC applications, actual trip levels are approximately 40% higher than values shown.
3. Settings above 130A are for special applications. NEC Article 430.110(a) requires the amperie rating of the disconnecting means to be not less than 115% of the motor full load amperie rating.

HMCP 25–100 A come with line and load steel body terminals, 3T100FB. HMCP 3–100 A come with line and load steel body terminals, 3T100FB. HMCP 150A come with line and load steel body terminals, 3T150FB.

</table>

**Notes**

- Motor FLA ranges are typical. The corresponding trip setting is at 13 times the minimum FLA value shown. Where a 13 times setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.
- For DC applications, actual trip levels are approximately 40% higher than values shown.
- Three-pole catalog numbers shown. Two-pole catalog numbers begin with HM2P in place of HMCP.
- All HMCP and HM2P 250A come with line and load steel body terminals, T250KB. (With suffix “C,” without “C” comes with T250KB.)

</table>

**Notes**

1. Motor FLA ranges are typical. The corresponding trip setting is at 13 x the minimum FLA value shown. Where a 13 x setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.
2. For DC applications, actual trip levels are approximately 40% higher than values shown.
3. Three-pole catalog numbers shown. Two-pole catalog numbers begin with `HM2P` in place of `HMCP`.

All HMCP and HM2P 400 A come with aluminum body terminals, 3TA400K. Catalog numbers with suffix “C” as shown above come with copper body terminals 3T400K.

Motor Protection Circuit Breakers (MPCB)

Product Description

Motor protection circuit breakers (MPCBs) provide UL 489 branch circuit protection, UL 508 and CSA C22.2 No. 14 motor protection, and meet IEC 60947-2 and 50947-4 requirements. Typical branch motor loads are protected by three-component starters, consisting of breaker, contactor and overload relay, or fuse, contactor and overload relay. The MPCB application-specific protection eliminates the need for motor overload relay found in the traditional three-component starter assembly. The branch motor load protection is simplified to an MPCB and contactor, reducing both space requirements and heat generation in customer panels. Protection is provided by application-specific electronic trip units.

The electronic trip unit provides typical motor overload relay functionality and short-circuit protection against potential phase-to-phase or phase-to-ground faults.

- Disconnecting means
- Branch circuit short-circuit protection
- Overload protection
  - Class 5, 10, 15 and 20
- Phase unbalance protection
  - FDMP breaker trips when there is a 40% difference between any phase compared to the calculated three-phase average
- Phase loss protection
  - Active when the maximum phase current is greater than 50% of FLA setting
  - Breaker will trip when minimum phase current is 25% or less than the maximum phase current
  - Time delay of 1 or 2 seconds before breaker trips
- Thermal memory to prevent immediate restart after overload trip to allow motor to cool down

The MPCB is based on the Series C F-Frame. Accessories for standard Series C breakers apply to the MPCB. Unlike Motor Circuit Protectors (MCPs), MPCBs are UL 489 listed with 35 kA and 65 kA interruption ratings.

Type ELC Current Limiter Attachment (Size 0–4)

Product Description

Eaton’s Type ELC current limiter attachment for the MCP is designed to provide increased interrupting capacity. The combination may be used for the application up to 200,000 A symmetrical at 600 Vac, making the MCP suitable for use in network distribution systems or other applications where unusually high fault currents are available. The current limiter connects to the load end of the MCP and is provided with terminals suitable for copper or aluminum conductors. (See table at right.)

Limiters are coordinated with the MCP so that normal fault currents are interrupted automatically by the MCP without any damage to the limiter. Only the rare very high fault is opened by the limiter. Faults that are interrupted by the limiter also magnetically trip the MCP, opening all three poles, preventing single-phase operation.

Each of the three poles of the Type ELC limiter is equipped with an indicator that extends when a fault is interrupted by the limiter.

Notes

1. Terminal wire connectors are UL listed for standard stranded wire sizes as defined in UL 498A or UL 498B.
2. Optional on special order for copper cable only.

All HMCP 800 A and 1200 A come without terminals. For terminals, see Page V4-T2-217.
2.3 Molded Case Circuit Breakers
Series C

Current Limiting Circuit Breaker Module

Product Overview
Power demand continues to grow in new and existing facilities. To meet increased demand, larger utility supplies, spot networks and large facility transformers are installed. The increased capacity of the electrical source results in increased fault currents in excess of 100 kA short-circuit protection. Eaton manufactures non-fused current limiting modules with interrupting capacities up to 200 kA at 600 Vac. Unlike fused current limiters with a one-time use, a current limiter module provides an automatic reset of the module after a short-circuit event. Resetting the molded-case circuit breaker is the only action required to restore critical power to the system; there is no time wasted with sourcing the correct replacement fuses or module to bring the system back online.

Product Description
The current limiting breaker modules use a unique contact design to enhance the system protection similar to that of the circuit breaker. When high short-circuit current is flowing through the contacts of these modules, the design results in very high interrupting capacities and improved current limiting characteristics.

Application Description
High-performance breakers are most commonly applied when very high fault levels are available and with applications where the current limiting capability is used upstream of the final load to limit current. Typical loads include lighting, power distribution, and motor control applications.

Features and Benefits
Superior system protection:
- Auto reset improves system uptime and eliminates the need for finding replacement parts
- No fuses to replace, reducing the overall cost of ownership and the waste created by fuses
- Overloads, by using inverse time current tripping characteristics of the molded-case circuit breaker
- Low-level short circuits, by using instantaneous and/or short-time delay tripping characteristics of the molded-case circuit breaker
- High-level short circuits, by using ultra-high-speed, blow-apart contacts of the current limiting module in series with the circuit breaker contacts
- Let-through currents, by improved opening speed of the contacts, the resultant rapid rise of arc voltage introduces impedance into the system

Standards and Certifications

### Notes

① Line and load terminal included.
② Two interphase barriers provided, mounted on line end of limiter, catalog number FJ1PBK.
③ Four interphase barriers provided, (2) line end of breaker, (2) load end of limiter.
④ Load side breaker terminations included for units configured with line mounted limiters.

FD-Frame With Current Limiter Module
Internal Accessories

Product Overview

**Alarm Switch**
For remote indication of automatic trip operation. Does not function with manual switching; however, it will operate when either a shunt trip or undervoltage release is operated. A “make” contact closes and a “break” contact opens when the alarm/lockout switch operates. The switch automatically resets when the circuit breaker is reset.

**Auxiliary Switch**
The auxiliary switch provides circuit breaker contact status information by monitoring the position of the molded cross bar that contains the moving contact arms. The auxiliary switch is used for remote indication and interlock system verification, and consists of one or two SPDT switches housed in a plug-in module. Each SPDT switch has one “a” and one “b” contact. When the circuit breaker contacts are open, the “a” contact is open and the “b” contact is closed.

**Auxiliary Switch and Alarm Switch Combination**
Each catalog number listed in tables on Pages V4-T2-278 and V4-T2-279 includes one auxiliary switch and one alarm switch. In an auxiliary switch ASL switch combination, the auxiliary switch is always mounted on the side of the plug-in module next to the center pole of the circuit breaker.

**Shunt Trip**
The shunt trip provides remote controlled tripping of the circuit breaker. The shunt trip consists of an intermittent rated solenoid with a tripping plunger and a cutoff switch assembled to a plug-in module. When required for ground fault protection applications, certain AC rated shunt trips, as noted in the electrical rating table, are suitable for operation at 55 percent of rated voltage. Select shunt trip catalog number for the voltage within the indicated voltage range. Shunt trip coils are designed to be applied at specific AC or DC voltages within the voltage range shown. Electrical ratings are also shown on applicable circuit breaker accessory nameplates.

**Low Energy Shunt Trip**
Low energy shunt trip devices are designed to operate from low energy output signals from dedicated current sensors typically applied in ground fault protection schemes. However, with a proper control voltage source, they may be applied in place of conventional trip devices for special applications. Flux paths surrounding permanent magnets used in the shunt trip assembly hold a charged spring poised in readiness to operate the circuit breaker trip mechanism.

When a 100 microfarad capacitor charged to 28 Vdc is discharged through the shunt trip coil, the resultant flux opposes the permanent magnet flux field, which releases the stored energy in the spring to trip the circuit breaker. As the circuit breaker resets, the shunt trip reset arm is actuated by the circuit breaker handle, resetting the shunt trip. The plug-in module is mounted in retaining slots in the top of the trip unit. Coil is intermittent-rated only. Cutoff provisions required in control circuit.
2.3 Molded Case Circuit Breakers
Series C

**Undervoltage Release Mechanism**

The undervoltage release mechanism monitors a voltage (typically a line voltage) and trips the circuit breaker when the voltage falls to between 70 and 35 percent of the solenoid coil rating.

The undervoltage release mechanism consists of a continuous rated solenoid with a plunger and tripping lever mounted in a plug-in module. The tab on the tripping lever resets the undervoltage release mechanism when normal voltage has been restored and the circuit breaker handle is moved to the reset (or OFF) position. With less than pickup voltage applied to the undervoltage release mechanism, the circuit breaker contacts will not touch when a closing operation is attempted.

**Note:** Undervoltage release mechanism accessories are not designed for, and should not be used as, circuit interlocks.

**Accessory Terminal Block (R-Frame)**

(For fixed-mounted configuration.)

Internal accessory wiring leads are normally supplied with pigtail leads (18 AWG) that exit from the right side of the circuit breaker. Where specified, fixed-mounted accessory terminal blocks are available. A maximum of one 24-point terminal block can be installed on the right side of the circuit breaker for the internal accessories.

For convenience in determining the appropriate number of terminal block points required, refer to Page V4-T2-274.

**PowerNet and Zone Interlock Kits (OPTIM 550 only) K-, L- and N-Frames**

Eaton’s PowerNet Communications Kit can be ordered to add PowerNet communications to an existing OPTIM 550 breaker in the field. An 18-inch (457.2 mm) wiring pigtail is routed to the rear of the breaker: two wires for PowerNet and two wires for 24 Vdc (45 mA load). It is recommended that the power supply be an “isolated high quality” unit.

**Notes**

① F-Frame circuit breakers are factory sealed. Underwriters Laboratories requires that internal accessories be installed at the factory. Internal accessories are UL listed for factory installation under E7819. Where local codes and standards permit and UL listing is not required, internal accessories can be field installed; however, this is not recommended for FDE breakers. Accessory installation should be done before the circuit breaker is mounted and connected.

② Includes 24-inch (609.6 mm) external pigtail leads, 18 AWG (18–0.010).

③ A maximum of two internal accessories may be mounted in a three-pole circuit breaker.

④ Suitable for mounting in right pole only of two- or three-pole breaker.

⑤ Not listed with Underwriters Laboratories; for field installation.

⑥ Standard pigtail lead exit location.

⑦ Standard mounting location.

⑧ Factory installation only. Leads exit load end of circuit breaker.

⑨ Listed with Underwriters Laboratories; for field installation on interchangeable trip unit breakers under E64983.

⑩ Standard mounting location—leads exit rear of breaker.

#### Notes
- Includes 24-inch external pigtail leads, 18 AWG (16–0.010).
- A maximum of two internal accessories may be mounted in a three-pole circuit breaker. Suitable for mounting in right pole only of two- or three-pole breaker.
- Standard pigtail lead exit location.
- Not listed with Underwriters Laboratories; for field installation.
- Pigtail wire size: 18 AWG (0.82 mm²).
- Not for use on F-Frame with electronic trip unit.
- 125 volts (max.), 50/60 Hz switch for use in electronic circuit of 100 micro amperes and 15 Vdc minimum.
- Not for use on four-pole circuit breakers.
- Only for use on three-pole F-Frame breakers with electronic trip unit. Installation auxiliary switch for FD electronic breakers on right pole must be performed at breaker factory.
- Listed with Underwriters Laboratories for field installation or interchangeable trip unit breakers under E64983.
- Standard mounting location—leads exit rear of breaker.

- Breakers with K-Frame OPTIM 550 can only accept accessories in left pole.
- Not for use on four-pole circuit breakers.
- A maximum of two auxiliary switches (any combination of 2a/2b or 4a/4b plug-in modules may be installed in a circuit breaker.
- This option is not field installable.
- Available on the OPTIM 550 only. Communications are not available with this option.

### Notes
1. Auxiliary switch and alarm switch combination options (Cxx) are not available on FDE 310+ with LSG or LSIG trip units due to exit wire limitations. To obtain both features, order a left mounting alarm switch (B01-B04 or B09-B11), and right mounting auxiliary switch (A30-A32).
2. Not listed with Underwriters Laboratories for field installation.
4. Not for use on four-pole circuit breakers.
5. Listed with Underwriters Laboratories for field installation of interchangeable trip unit breakers under EB4983.
7. Breakers with K-Frame OPTIM 550 can only accept accessories in left pole.
8. Will not install on OPTIM Trip (RH).
9. Available on the OPTIM 550 only. Communications are not available with this option.
10. This option is not field installable.

Notes

① Not listed with Underwriters Laboratories, for field installation.
② Pigtail wire size: 18 AWG (0.82 mm²).
③ Standard pigtail lead exit location.
④ 120 Vac marked suitable for ground fault protection devices.
⑤ Standard mounting location.
⑥ Not for use on four-pole circuit breakers.

G-Frame circuit breakers are factory sealed. Underwriters Laboratories requires that internal accessories be installed at the factory.
Internal accessories are UL listed for factory installation under E7819.
Where local codes and standards permit and UL listing is not required, internal accessories can be field installed.
Accessory installation should be done before the circuit breaker is mounted and connected.

**Notes**

⑦ Listed with Underwriters Laboratories for field installation under E64983.
⑧ Standard mounting location—leads exit rear of breaker.
⑨ Supply voltages suitable for use with Class 1 GFP devices. Marking label included with accessory kits.
⑩ A maximum of two shunt trip plug-in modules may be installed in a circuit breaker.
### Low Energy Shunt Trip

**Ordering Information**

Select shunt trip catalog number for the voltage within the indicated voltage range. Shunt trip coils are designed to be applied at specific AC or DC voltages within the voltage range shown. Electrical ratings are also shown on applicable circuit breaker accessory nameplates.

Notes

1 Includes 24-inch (609.6 mm) external pigtail leads, 18 AWG (18–0.010).
2 A maximum of two internal accessories may be mounted in a three-pole circuit breaker.
3 Suitable for mounting in left pole only of three-pole breaker.

G-Frame circuit breakers are factory sealed. Underwriters Laboratories requires that internal accessories be installed at the factory. Internal accessories are UL listed for factory installation under E7819.

Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.

Notes

- Standard pigtail lead exit location.
- Standard mounting location.
- Not for use on right pole of four-pole circuit breaker.

F-Frame circuit breakers are factory sealed. Underwriters Laboratories requires that internal accessories be installed at the factory.

Internal accessories are UL listed for factory installation under E7819.

Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.

### Notes

1. For electrical rating data for manual, automatic and electrical reset undervoltage release mechanisms, refer to Eaton.
2. Listed with Underwriters Laboratories for field installation under E64983.
3. Not for use on the right pole of four-pole circuit breakers.
4. Standard mounting location—leads exit rear of breaker.

### Notes
- Listed with Underwriters Laboratories, for field installation under E64983.
- Standard mounting location—leads exit rear of breaker.
- For use with KT (thermal-magnetic) trip units only.
- Not for use on right pole of four-pole circuit breaker.
- Breakers with K-Frame OPTIM 550 can only accept accessories in left pole.

### Notes

1. Listed with Underwriters Laboratories for field installation under E64963.
2. Standard mounting location—leads exit rear of breaker.
3. For use with LT (thermal-magnetic) trip units only.
4. Not for use on right pole of four-pole circuit breaker.

### Notes

1. One 24-point accessory terminal block provided with circuit breaker when ordered factory installed or shipped from warehouse as separate item when ordered for field installation. See Digitrip RMS master connection diagram (IL 29C714).
2. Installation of these kits restrict any other attachments from being installed in the RH pole.
3. Includes a ground fault alarm signal that can drive the ground fault alarm unit (catalog number GFAU).

### Notes

1. Endurance: 6000 electrical operations plus 4000 mechanical operations.
2. Pigtail wire size: 18 AWG (0.82 mm²).
3. For use in electronic circuit of 100 micro amperes and 15 Vdc minimum.
5. Endurance: 500 electrical operations plus 1000 mechanical operations.
7. Endurance: 500 electrical operations plus 2500 mechanical operations.
8. Pigtail wire size: 18 AWG (0.82 mm²). Leads are red, black and blue.

### Notes

1. Average unlatching time: 6 milliseconds.
2. Average circuit breaker contact total opening time: 18 milliseconds.
3. Endurance: 6000 electrical operations plus 4000 mechanical operations.
5. Supply voltages suitable for use with Class 1 GFP devices. Marking label included with accessory kits.
7. Approximate total circuit breaker contact opening time: 8 milliseconds.
8. Endurance: 5000 electrical operations plus 1000 mechanical operations.

### Notes
1. Approximate unlatching time of 6 milliseconds.
2. Average circuit breaker contact total opening time approximately 62 milliseconds, at rated voltage.
3. Endurance: 500 electrical operations and 2500 mechanical operations.
4. Shunt trip can be operated up to a maximum of six times per minute.
5. Maximum operating voltage—110% of maximum voltage range rating.
6. Pigtail wire size: 18 AWG (0.82 mm²). Leads are yellow and white.

**Notes**

1. Endurance: 500 electrical operations plus 2500 mechanical operations.
2. Pigtail wire size: 18 AWG (0.82 mm²). Leads are orange and brown.
3. UVR will override a momentary voltage dip up to the response time shown.
4. Unlatching occurs 1 millisecond before circuit breaker contacts begin to separate.
5. For 1 minute.
2.3 Molded Case Circuit Breakers
Series C

External Accessories

Product Overview

End Cap Kit
The end cap kit slides onto the line or load conductor of the circuit breaker and acts as a threaded adapter for the conductor to accept a ring terminal or other bolt-on connector. The end cap kit is available with English and metric thread sizes. (Field installation only.) Listed per UL File E7819.

Keeper Nut
The keeper nut slides onto the line or load conductor of the circuit breaker and acts as a threaded adapter for the conductor to accept a ring terminal or other bolt-on connector. The keeper nut is available with English and metric thread sizes. Screws and washers are supplied by customer. (Field installation only.) Listed per UL File E7819.

L-, M-, N-Frames
Not required. Terminals are threaded.

J-Frame Plug Nut
The plug nut is used in applications where screw-connected ring-type terminals are preferred to connect cables to circuit breaker conductors. The plug nut is press-fit into the opening in the circuit breaker terminal conductor. Screws and washers are supplied by customer.

Terminal Adapter

Control Wire Terminal Kit
The control wire terminal kit provides a means to tap off control power from a main disconnect, using the provided male end of a quick disconnect.

For use with steel or stainless steel terminals only.

Note: Terminal Kits contain one terminal for each pole and one terminal cover.

Multiwire Connectors
Eaton’s field-installed multiwire connectors for the load side (OFF) end terminals are used to distribute the load from the circuit breaker to multiple devices without the use of separate distribution terminal blocks.

Multiwire lug kits include mounting hardware, insulators and tin-plated aluminum connectors to replace three mechanical load lugs. UL listed as used on the load side (OFF) end.

Terminal Shields
Terminal shields provide protection against accidental contact with live line side terminations. Terminal shields are fabricated from high dielectric insulating material and fasten over the front terminal access openings. Small openings in the shields provide limited access to the terminals for tightening connectors. (Field installation only.)

Rear Fed Terminals
Rear fed terminals allow the cable to connect to the breaker from the back instead of the top. Terminal shields or interphase barriers are included with each rear fed terminal kit (depending on frame size). When catalog number starts with a 3, it indicates a kit with three terminals in each kit. Catalog number beginning with a TA indicates one terminal.

</table>
**Terminal End Covers**
The terminal end covers are designed for use in motor control center applications where, because of confined spaces, line side conductors are normally custom fitted. The molded end covers are made of high dielectric glass-polyester and slide over the line ends of the circuit breaker. Close fitting conductor openings are molded into the end covers. The end cover and circuit breaker case fit together to form terminal compartments that isolate discharged ionizing gases during circuit breaker tripping. Terminal end covers are available with two conductor opening diameters, 0.25-inch (6.4 mm) and 0.41-inch (10.4 mm), and are listed per UL File E7819. (Field installation only.)

**Padlockable Handle**

**Padlockable Handle Lock**
The device is positioned in the cover opening to prevent handle movement. Will accommodate one 5/16-inch (8 mm) padlock.

**Snap-on Padlockable Handle Lock Hasp**
The snap-on padlockable handle lock allows the handle to be locked in the OFF or ON position. (Trip-free operation allows the circuit breaker to trip when the handle lock holds the circuit breaker handle in the ON position.) This device was designed for use on the single-pole circuit breaker, but may be used on one-, two-, three-, and four-pole styles. The handle lock snaps onto the escutcheon area of the handle with an optional retaining screw for added security. The handle lock will accommodate one padlock with a 1/4-inch (6.4 mm) shackle. Listed per UL File E7819. (Field installation only.)

**Cylinder Lock**
The cylinder lock internally blocks the trip bar in the tripped position to prevent the circuit breaker from being switched to ON. The cylinder lock is factory installed in the left pole only of the circuit breaker cover. Other internally mounted accessories cannot be installed in the same pole as the cylinder lock. (Factory installation only.)

**Key Interlock Kit (Lock Not Included)**
The key interlock kit is used to externally lock the circuit breaker handle in the OFF position. When the key interlock is locked, an extended deadbolt blocks movement of the circuit breaker handle. Uniquely coded keys are removable only with the deadbolt extended. Each coded key controls a group of circuit breakers for a given specific customer installation.

**Walking Beam Interlock**
The walking beam interlock provides mechanical interlocking between two adjacent circuit breakers of the same pole configuration. The walking beam interlock mounts on a bracket behind and between the circuit breakers. A plunger on each end of the beam is inserted through an access hole in the back plate and base of each circuit breaker. The walking beam interlock prevents both circuit breakers from being switched ON at the same time. If a walking beam interlock is installed, the wiring troughs in the back of the circuit breaker case are blocked by the plungers and cannot be used for cross wiring. Factory modified circuit breakers are required for this application. UL File E38116.

**Electrical Operator**
The electrical (solenoid) operator is a single solenoid mechanism that enables local and remote circuit breaker ON, OFF, and reset switching. The electrical operator is mounted on the circuit breaker cover within the trimline of the circuit breaker. The electrical operator uses a unique bi-stable latch that allows the device to operate using one solenoid. The accessory provides high-speed switching with a maximum operating time of 5 cycles (80 mS), making it suitable for generator synchronizing applications.

Means are provided for remote electrical operation and for local manual operation. A special slide includes provisions for padlocking the circuit breaker handle in the OFF position. The slide will accept three padlock shackles with a maximum diameter of 1/4-inch (6.4 mm) each. An interlock electrically disconnects the solenoid when the electrical operator cover is removed. The rating data tables provide electrical rating data for the electrical (solenoid) operator.
The electrical (motor) operator allows the circuit’s breaker to be opened, closed or reset remotely. It also has a lock-off capability and provisions for manual operation.

The electrical (motor) operator contains a reversible motor connected to a ball screw. The ball screw drives the circuit breaker handle. Limit switches and relays are used to control the motor.

**Plug-In Adapters**
Plug-in adapters simplify installation and front removal of circuit breakers. Individual line and load plug-in adapters are available for rear connection applications on two-, three-, and four-pole circuit breakers. Common mounting plates for line- and load-end adapters are available.

One plug-in adapter kit is required for line-end and one for load-end.

Plug-in adapters are UL approved unless otherwise noted.

**Rear Connecting Studs**
Rear connecting studs are available in several sizes to accommodate specific fixed-mounted circuit breaker applications.

Each rear connecting stud assembly consists of one stud and one tube. To maintain proper clearances between poles, select alternate long and short stud assemblies for circuit breakers with more than one pole. One assembly is required for line-end and one for load-end of each pole. Tubes must be ordered separately. Connecting studs are available only with English thread sizes.

**Panelboard Connecting Straps**
Panelboard connecting straps are used to connect the circuit breaker terminals to the panelboard bus. The panelboard connecting straps are available with various ratings for outside and center poles. (Field installation only.)

Panelboard connecting straps are available to meet the needs of most standard panelboard applications. Style numbers for mounting brackets for CDP panelboard installations are also included.

**Note:** Not UL listed. Refer to panelboard manufacturer for compatibility.

**Type LFD Current Limiter**
The LFD current limiter is an accessory that bolts to the load end of a standard FDB or FD thermal-magnetic circuit breaker, providing 200,000 A interrupting capacity at up to 600 Vac. LFD current limiters for thermal-magnetic and electronic circuit breakers are listed with Underwriters Laboratories under File E47239.

**Ground Fault Alarm Unit**
The ground fault alarm unit is a remotely mounted device with a combination indicating light/test button that will light when the breaker trips or alarms on ground fault. The ground fault alarm unit requires a separate 120 Vac power source to power the light and the internal relay, which has 1NO and 1NC contacts for remote indication. The ground fault alarm unit can be panel mounted for ordering with an optional face mounting bracket. For use on Digitrip 310 only, K- through N-Frame.

**IQ Energy Sentinel**
The IQ Energy Sentinel is a highly accurate, microprocessor-based, breaker-mounted device designed to monitor power and energy readings. It represents an alternative to watt meters, watt-hour meters, and watt demand meters. Key advantages include savings in space, lower installation costs, and remote monitoring capability.

The IQ Energy Sentinel mounts on the load side of a Series C F-Frame (150 ampere) circuit breaker. It can be applied on three-phase, four-wire systems, or single-phase, three-wire systems with voltage connected through Phases A and C.

For more information, see Descriptive Bulletin 8178.

**Potential Transformer Module**
The potential transformer module is required for the Digitrip OPTIM 1050 to provide a voltage input to allow the trip unit to monitor power and energy as well as power factor. The potential transformer module is a 6 VA transformer with a primary voltage input of up to 600 volt line to line. Three 0.1 ampere fuses are provided on the primary of the transformer and can be used for isolation purposes during dielectric testing. The device is normally panel mounted and can feed up to 16 OPTIM trip units.

**Solid-State (Electronic) Portable Test Kit**
The solid-state (electronic) portable test kit provides verification of performance of all ratings of Digitrip 310 electronic trip units installed in circuit breakers while in service under varying load and/or phase imbalance. The test kit operates on 120-volt, 50/60 Hz power; it includes complete instructions and test times for testing long time, short time/instantaneous operation and optional ground fault operation of the circuit breaker.
**Breaker Interface Module (BIM)**

The Breaker Interface Module (BIM) is a panel mounted user interface device that is mounted on the front of an electrical assembly or at a remote location. The BIM is used to access, configure, test and display information for OPTIM trip units and other devices. The BIM consists of four display windows, eight function buttons, 18 LEDs, and a graphical time/current curve to provide breaker status, operational information, protection status and energy monitoring. A 24 Vdc power supply is required to provide power to the BIM. This is supplied by the switchboard builder to Eaton’s specifications. The BIM is a member of Eaton’s PowerNet family of communicating devices that connects OPTIM trip units, Digitrip RMS 810/910 trip units and energy sentinels as a subnetwork system. The BIM can also be connected to a main network via a PONI module to PowerNet software.

**Digitrip OPTIMizer**

The Digitrip OPTIMizer is a hand-held programmer that is used to access, configure, test and display information from OPTIM trip units. The OPTIMizer plugs into the front of an OPTIM trip unit via an eight-pin telephone jack and is powered by a nine-volt battery or the auxiliary power module. One highlighted feature is the “Copy” and “Download” commands. Setting up multiple OPTIM trips can be finished in minutes and with no errors. An Auxiliary Power Module connection provides a trip test when control power is not present at the breaker. The OPTIMizer is supplied as a standard package to include the programmer, the eight-pin connection cord, battery and carrying case. The auxiliary power module is optional.

**Auxiliary Power Module**

The auxiliary power module is a power supply requiring 120 Vac input at 50 or 60 Hz that provides a 32 Vdc output. The auxiliary power module provides control power for testing an OPTIM trip unit when other means of control power is not available or for continuous OPTIMizer operation versus temporary with a battery. The auxiliary power module connects into the top of the Digitrip OPTIMizer via a keyed receptacle. The main application for the auxiliary power module would be for the testing of a standalone non-communicating OPTIM breaker that ordinarily would not have control power.

**Cause of Trip Display/Remote Mount Cause of Trip Display**

The Cause of Trip Display can be field-installed on any Digitrip RMS 310+ trip unit. The device provides breaker information through an LCD screen, such as cause of trip, phrase current, ground current and low loads. The display is ideal for troubleshooting common trips such as ground fault, long delay, and instantaneous/short delay. The DIGIVIEW version will provide a local display at the breaker without additional wiring by connecting directly onto the trip unit. The DIGIVIEWR06 version has a 6 foot cable that allows users to mount the display on the outside of an enclosure door and connect to the trip unit that is contained inside the enclosure.

**Cause of Trip LED Module**

The Cause of Trip LED Module can be field-installed on any Digitrip RMS 310+ trip unit. The device provides a cause of trip indication via LED. The Cause of Trip LED Module connects directly onto the trip unit. When the breaker trips, the module indicates the cause of trip (long delay, short delay, instantaneous and ground) via LED indication. The module is reset after the breaker is reset.

**Note:** The OPTIMizer can work off of 32 Vdc control power, although 24 Vdc is the standard on OPTIM breakers.

#### Base Mounting Hardware

**Ordering Information**

Hardware for surface mounting of circuit breakers is supplied only on request. Hardware consists of mounting screws and lockwashers. Order hardware for circuit breaker pole configurations as required.

### Mounting Hardware

#### Screw Length in Inches (mm)

<table>
<thead>
<tr>
<th>Screw Length in Inches (mm)</th>
<th>Catalog Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.138–32 x 2.03 (3.5 x 68.7 mm) Std.</td>

</tr>
<tr>
<td>0.138–32 x 3.00 (3.5 x 76.2 mm) Std.</td>
<td>8763C80G05</td>
</tr>
</tbody>
</table>

**Notes**

- When catalog number starts with a 3, it indicates a kit with three terminals in each kit.
- Catalog number beginning with a TA indicates one terminal.
- GD breakers require special tapping for multiwire lugs, as described in the IL or use with standard aluminum collars.

### Key Interlock Kit

**Ordering Information**

Key interlock kits contain the necessary interface and hardware to install a trapped key interlock from one of the listed manufacturers. Key interlocks are not installed or supplied as part of the breaker, and must be obtained separately from the lock manufacturer or through the manufacturer of the equipment on which the breaker will be installed. Select the mounting kit catalog number to match the type of lock used.

**Note**

‡ When ordering Castell Interlock, it is necessary for customer to specify that the mounting bolt holes must be 10 mm in diameter.
2.3 Molded Case Circuit Breakers
Series C

**Sliding Bar Interlock**

**Ordering Information**

The sliding bar interlock is available for mounting between two adjacent three-pole circuit breakers with circuit breakers centerline spacing as indicated in table and enclosure front panel thickness of 1/8 or 3/16 inch (3.2 or 4.8 mm). (For field installation only.)

<table>
<thead>

</tbody>
</table>

**Walking Beam Interlock**

**Ordering Information**

The walking beam interlock is available for mounting between two adjacent circuit breakers spaced 1/4-inch (6.4 mm) apart and having the same pole configuration. The two circuit breakers must be factory modified to accept the walking beam interlock assembly (suitable for use with either two-, three- or four-pole circuit breakers).

With properly modified circuit breakers, the walking beam interlock is suitable for field installation. Order circuit breakers specifying modification for walking beam (20% price adder) and select walking beam interlock from table below. Circuit breakers and walking beam interlock are boxed and shipped separately.

2.3 Molded Case Circuit Breakers

Series C

Type LFD Current Limiter

The LFD current limiter is an accessory that bolts to the load end of a standard FDB or FD thermal-magnetic and electronic circuit breaker, providing 200,000 A interrupting capacity at up to 600 Vac. LFD current limiters for thermal-magnetic circuit breakers are listed with Underwriters Laboratories under File E47239.

<table>
<thead>
<tr>

<tbody>
<tr>
<td>15–70</td>
<td>LFD3070R</td>
</tr>
<tr>
<td>80–160</td>
<td>LFD3150R</td>
</tr>
</tbody>
</table>

Ground Fault Alarm Unit

The ground fault alarm unit is a remotely mounted device with a combination indicating light/test button that will light when the breaker trips or alarms on ground fault. The ground fault alarm unit requires a separate 120 Vac power source to power the light and the internal relay, which has 1NO and 1NC contacts for remote indication. The ground fault alarm unit can be panel mounted for ordering with an optional face mounting bracket. For use on Digitrip 310 only, K- through N-Frame.

<table>

<td>1264C67G01</td>
</tr>
</tbody>
</table>

IQ Energy Sentinel

The IQ Energy Sentinel is a highly accurate, microprocessor-based, breaker-mounted device designed to monitor power and energy readings. It represents an alternative to watt meters, watt-hour meters, and watt demand meters. Key advantages include savings in space, lower installation costs, and remote monitoring capability.

The IQ Energy Sentinel mounts on the load side of a Series C F-Frame (150 ampere) circuit breaker. It can be applied on three-phase, four-wire systems, or single-phase, three-wire systems with voltage connected through Phases A and C.

For more information, see Descriptive Bulletin 8178.

Potential Transformer Module

The potential transformer module is required for the Digitrip OPTIM 1050 to provide a voltage input to allow the trip unit to monitor power and energy as well as power factor. The potential transformer module is a 6 VA transformer with a primary voltage input of up to 600 volt line to line. Three 0.1 ampere fuses are provided on the primary of the transformer and can be used for isolation purposes during dielectric testing. The device is normally panel mounted and can feed up to 16 OPTIM trip units.

<table>
<thead>
<tr>
<th>Potential Transformer Module</th>

</tr>
</thead>
<tbody>
<tr>
<td>Potential transformer module</td>
<td>DOPTMLN</td>
</tr>
</tbody>
</table>

Solid-State (Electronic) Portable Test Kit

The solid-state (electronic) portable test kit provides verification of performance of all ratings of Digitrip 310 electronic trip units installed in circuit breakers while in service under varying load and/or phase imbalance. The test kit operates on 120-volt, 50/60 Hz power; it includes complete instructions and test times for testing long time, short time/ instantaneous operation and optional ground fault operation of the circuit breaker.

<table>
<thead>
<tr>
<th>Portable Test Kit</th>

</tr>
</tbody>
</table>
**Breaker Interface Module (BIM)**
The Breaker Interface Module (BIM) is a panel mounted user interface device that is mounted on the front of an electrical assembly or at a remote location. The BIM is used to access, configure, test and display information for OPTIM trip units and other devices. The BIM consists of four display windows, eight function buttons, 18 LEDs, and a graphical time/current curve to provide breaker status, operational information, protection status and energy monitoring. A 24 Vdc power supply is required to provide power to the BIM. This is supplied by the switchboard builder to Eaton's specifications. The BIM is a member of Eaton’s PowerNet family of communicating devices that connects OPTIM trip units, Digitrip RMS 810/910 trip units and energy sentinels as a subnetwork system. The BIM can also be connected to a main network via a PONI module to PowerNet software.

**Digitrip OPTIMizer**
The Digitrip OPTIMizer is a hand-held programmer that is used to access, configure, test and display information from OPTIM trip units. The OPTIMizer plugs into the front of an OPTIM trip unit via an eight-pin telephone jack and is powered by a nine-volt battery or the auxiliary power module. One highlighted feature is the “Copy” and “Download” commands.

Setting up multiple OPTIM trips can be finished in minutes and with no errors. An Auxiliary Power Module connection provides a trip test when control power is not present at the breaker. The OPTIMizer is supplied as a standard package to include the programmer, the eight-pin connection cord, battery and carrying case. The auxiliary power module is optional.

**Note: 24 Vdc Power Supply**
A 24 Vdc power supply is required for all Digitrip OPTIM trip units that are required to communicate either on the main Eaton PowerNet network or as a subnetwork to a BIM. The breaker’s load is 45 mA of current. Typically one power supply is required per switchboard and can provide control power to a BIM and the OPTIM trip units. The 24 Vdc power supply should be an “isolated high quality” power supply with a “CE” label, and is normally provided by the switchboard manufacturer to Eaton’s recommendations.

**Digitrip OPTIMizer**

| Catalog Number | OPTIMizer—standard package |

**Auxiliary Power Module**
The auxiliary power module is a power supply requiring 120 Vac input at 50 or 60 Hz that provides a 32 Vdc output. The auxiliary power module provides control power for testing an OPTIM trip unit when other means of control power is not available or for continuous OPTIMizer operation versus temporary with a battery. The auxiliary power module connects into the top of the Digitrip OPTIMizer via a keyed receptacle. The main application for the auxiliary power module would be for the testing of a standalone non-communicating OPTIM breaker that ordinarily would not have control power.

**Digitrip RMS 810/910 trip unit**

| Catalog Number | DIGIVIEWR06 |

**Cause of Trip Display/Remote Mount**
The Cause of Trip Display can be field-installed on any Digitrip RMS 310+ trip unit. The device provides breaker information through an LCD screen, such as cause of trip, phrase current, ground current and low loads. The display is ideal for troubleshooting common trips such as ground fault, long delay, and instantaneous/short delay.

**Note:** The DIGIVIEW version will provide a local display at the breaker without additional wiring by connecting directly onto the trip unit. The DIGIVIEWR06 version has a 6 foot cable that allows users to mount the display on the outside of an enclosure door and connect to the trip unit that is contained inside the enclosure.

| Catalog Number | DIGIVIEW |

**Cause of Trip LED Module**
The Cause of Trip LED Module can be field-installed on any Digitrip RMS 310+ trip unit. The device provides a cause of trip indication via LED. The Cause of Trip LED Module connects directly onto the trip unit. When the breaker trips, the module indicates the cause of trip (long delay, short delay, instantaneous and ground) via LED indication. The module is reset after the breaker is reset.

Notes

1. UL listed under UL File E64983.
2. The electrical operator design is endurance tested for 8000 electrical operations.
3. Tolerance: +10%, –15% of nominal voltage.
4. Use current-limiting type fuse where required.
5. UL listed under UL File E64124.
6. Frequency: 50/60 Hz.
7. Maximum operating time: 3 seconds max. Operator is an intermittent duty device. The safe duty cycle (OFF to ON to OFF) should not exceed one per minute.
8. The electrical operator design has been endurance tested for 6000 electrical operations.
9. Maximum operating time: 5 cycles (80 mS).
10. Maximum operating time: 12 cycles.
11. The electrical operator design has been endurance tested for 2,500 electrical operations.
12. Maximum operating time: 12 cycles max. Operator is an intermittent duty device. The safe duty cycle (OFF to ON to OFF) should not exceed one per minute.
13. Operator is an intermittent duty service. The safe duty cycle (OFF to ON to OFF) should not exceed one per minute.
14. Electric Operating time at rated voltage: (a) To turn breaker ON–1/2 second max. (b) To turn breaker OFF–1/2 second max.
15. Motor operating temperature; Class “A” temperature limits apply.
16. A minimum 1 kVA power source is recommended for motor operation.
17. Applied voltage should be no less than 85% or no more than 110% of rated voltage.
18. For OPTIM trip, OPEOPCK kit required.

Definite Purpose Molded Case Circuit Breakers
Optimized solution for HVAC/R and Pumping Applications.

Product Overview

**GP, FP, KP, LP and MP Frames**

**15–800 Amperes**

**NEMA 480 Vac**

Eaton’s Definite Purpose molded case circuit breakers are available in three-pole configurations, and are designed to meet the specific requirements of HVAC/R and pumping applications.

As with other members of Eaton’s family of molded case circuit breakers, Definite Purpose breakers provide high quality, reliability, unmatched performance and outstanding value.

Eaton’s Definite Purpose breakers are rated from 15–800 A and are available in five frame sizes. Each frame size has the same compact outside dimensions as Series C breakers.

Additionally, Definite Purpose breakers have been rigorously tested to the UL 489 standard. They are assembled in an ISO certified facility.

**Trip Units and Terminals**

Definite Purpose breakers contain factory-sealed thermal-magnetic trip units.

The GP-Frame breaker (15–100 A) includes line and load terminals and breaker mounting hardware.

FP (15–225 A), KP (200–400 A), LP (450–600 A) and MP (700–800 A) Frames ship standard without mounting hardware. For line and load terminals, add “L” to the end of the catalog number or “W” for no terminals.

**External Accessories**

Definite Purpose breakers use the same external accessories as Series C breakers: handle mechanisms, motor operators, lock-off devices, busbar extensions and multiple terminal arrangements.

2.4 Molded Case Circuit Breakers
Definite Purpose

Features

Base Mounting Hardware
English base mounting hardware is included with GP frame only. For all other frames, order base mounting hardware separately as per the table to the right.

Line and Load Terminals
Both line and load terminals are included with GP-Frame Definite Purpose breakers. For all other frames, add “L” for line and load terminals to be included or “W” for no terminals.

Accessories

End Cap Accessory Kit
End caps for line and load conductor termination are optional with each breaker. End caps secure the conductor with a ring-type connector. The kit includes one end cap, three cap screws, three nuts and three lock washers.

Series C Accessories
For internal accessories, see Page V4-T2-273.
For external accessories, see Page V4-T2-304.

Notes
(1) Package of three terminals.
(2) Replacement use only.

End Cap Accessory Kit
### Catalog Number Selection

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

**Notes**

1. Not available on GP-Frame.
2. When choosing a molded case switch, select the highest amperage rating for the frame and the standard interrupting rating.

#### Options

- **K** = Molded case switch
- **L** = Line and load terminals
- **W** = Without terminals or mounting hardware

#### Amplification Rating

PM3 Monitoring and Metering Module

Product Description
The PM3 is the perfect solution for main, branch circuit and standalone monitoring/metering applications. With information at your fingertips, you can meter, monitor and communicate phase current and voltage with calculated power and energy.

The PM3 is versatile, as it connects to the load side of a molded-case circuit breaker (MCCB) and communicates easily to a local network or the Internet through Eaton Power Xpert® Gateways (PXGs). Cost of ownership is reduced through ease of installation. The PM3 is your ideal MCCB metering solution.

Application Description
- Communications via Modbus® and Eaton’s INCOM™ protocol, compatible with Eaton’s PXG for Web page and Ethernet capabilities
- Works in 240 Vac PM3, 480 Vac and 600 Vac applications
- 480 Vac PM3 has internal power supply to power electronics
- 600 Vac PM3 requires 24 Vdc auxiliary power
- Seamlessly integrates with thermal-magnetic or electronic trip units

Features and Benefits
- Communicates electrical system data and circuit breaker status
- Calculates power and energy to an accuracy of 1.0% of reading
- Configurable with thermal-magnetic or electronic trip units
- Suitable for reverse-feed applications
- Easy to install

PM3 Benefits When Combined with 310+ Electronic Trip Unit
- Alarming: high load and ground fault
- Zone selective interlocking
- Arcflash Reduction Maintenance System™
- Cause-of-trip localized information through Digiview and TRIP-LED
- Modbus/INCOM communications
- HMI connectivity through PXG
- Current and voltage metering to 0.5% of reading
- Power and energy monitoring to 1.0% of reading
- Reduces cost of ownership

Standards and Certifications
- Meets ANSI C12.1 revenue grade standard with a current and voltage accuracy of 0.5% of reading
- UL 489, Annex J
- IEC 61000-4-2—ESD
- IEC 61000-4-4—EFT
- IEC 61000-4-5—SURGE
- IEC 61000-4-6—EMC
- ANSI C12.1 (1% accuracy)
- UL/cUL/CE

Engine Generator Circuit Breakers

**Product Description**

Eaton’s engine generator molded case circuit breakers are designed specifically for application on diesel engine powered standby generators where high interrupting circuit breakers are not required. The JG through NG breakers are equipped with a special trip unit, that includes standard thermal (overload) protection and special low magnetic pickup range (FG includes a fixed thermal-magnetic pickup). The standard thermal trip unit provides overload protection for conductors per the National Electrical Code®. The low magnetic pickup range is approximately two to five times the continuous rating and provides closer low-level short-circuit protection when applied on generators that have very low short-circuit capacity. This combination allows the user to customize the breaker to the generator output.

**Application Description**

Engine generator circuit breakers are suitable for reverse feed application.

**Standards and Certifications**

Engine generator molded case circuit breakers are designed to conform with the following standards:

- Underwriters Laboratories Standard UL 489, Molded Case Circuit Breakers and Circuit Breaker Enclosures File E7819
- Canadian Standards Association Standard C22.2 No. 5, Service Entrance and Branch Circuit Breakers
- International Electrotechnical Commission Recommendations IEC 947-2, Circuit Breakers

Conformance with these standards satisfies most local and international codes, assuming user acceptability and simplified application.

## Catalog Number Selection

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers.

- **FG** breakers include both line and load side terminals.
- **JG**, **KG**, **LG** and **NG** breakers with **W** catalog number suffix do not include any terminals.
- **JG**, **KG**, **LG** and **NG** breakers without **W** catalog number suffix include both line and load terminals.
- Contact Eaton for additional ratings and internal/external accessories.
- Reverse feed.

**Product Selection**

The following table lists FG through NG engine generator breakers with the maximum generator kVA and kW rating. Engine generator breakers are applied at 115% of the generator full load current rating (FLA). The maximum kW rating is based on three-phase generators at 80% power factor.

**Notes**

1. Breaker continuous current is based on 115% of the generator full load ampere rating.
2. Based on three-phase generators at 80% power factor.
3. FG, JG, KG include thermal-magnetic trip units, LG and NG include electronic trip units.
4. Breaker includes line and load terminals.
5. Without terminals.

The following catalog numbers have center tap studs for dual voltage applications: JG3070CT, JG3100CT, JG3125CT, KG3175CT, LG3300CTW.

Enclosure Selection Data

**Enclosures**

**Type 1 General Purpose**
- Surface or flush mounting
- 15–1200 ampere range
- 600 Vac, 500 Vdc

Type 1 enclosed breakers are designed for use in commercial buildings, apartment buildings and other areas where a general purpose enclosure is applicable. The breaker is front operable and is capable of being padlocked in either the ON or OFF position. Ratings through 1200 amperes are listed by Underwriters Laboratories as suitable for service entrance application.

**Type 12 Dustproof Surface Mounting**
- No knockouts or other openings
- 15–1200 ampere range
- 600 Vac, 500 Vdc

The Type 12 enclosure is designed in line with specifications for special industry applications where unusually severe conditions involving oil, coolant, dust and other foreign materials exist in the operating atmosphere. The handle padlocks in the ON or OFF position. Ratings through 1200 amperes are listed by Underwriters Laboratories as suitable for service entrance application.

**Type 3R Rainproof Surface Mounting**
- Interchangeable hubs (through 400 amperes)
- 15–1200 ampere range
- 600 Vac, 500 Vdc

This general purpose outdoor service center employs a circuit breaker inside a weatherproof sheet steel breaker enclosure to serve as a main disconnect and protective device for feeder circuits. Ratings through 1200 amperes are listed by Underwriters Laboratories as suitable for service entrance application.

Type 12, 12K Dustproof
Direct Current Circuit Breakers

Product Description

DC (direct current) systems and applications are becoming commonplace as alternative energy sources have expanded and the number of DC devices and data centers using DC power has swelled.

Eaton offers molded case circuit breakers and switches to meet circuit protection and switching requirements for a host of different DC end user requirements. Applications include UPS battery supply circuits, solar systems and electric vehicle charging, as well as commercial and industrial distribution.

Current ratings are available from 15 to 3000 A, with a full scale of voltage and interrupting ratings to address needs ranging from standard to the highest performance. Optional internal accessories provide remote tripping and indication of breaker status.

The DC breaker family is UL 489 listed and exceeds the requirements in UL 489 Supplement SC for UPS applications. Eaton breakers may be applied in both ungrounded and select grounded applications, with poles connected in series to operate at the maximum voltages shown on Page V4-T2-348. To use DC circuit breakers on 600 V grounded systems, three poles in series must be connected on the ungrounded leg.

All DC breakers use the same internal and external accessories as their corresponding Series C and Series G AC frame equivalents, except for the NBDC breaker, which uses the same internal and external accessories as the standard NB frame.

The HFDDC through HMDLDC and EG to RG DC breakers use the same internal and external accessories as their corresponding Series C and Series G AC Frame equivalents. NBDC uses the same internal and external accessories as standard NB breakers.

Many of the Eaton AC molded case circuit breakers carry 250 Vdc ratings for ungrounded systems. Refer to Pages V4-T2-9 and V4-T2-118 for these interrupting tables.
## Quick Reference Direct Current Circuit Breakers

### Notes

1. DC ratings apply to substantially non-inductive circuits. Time constants per UL 489.
2. EGEDC through HMDLDC have been tested up to 300 Vdc to allow for battery charging voltages. 750 Vdc is common in transportation applications.
3. HFDDC, four-pole 750 Vdc is available up to 150 A maximum. 300 Vdc and 750 Vdc are not UL 489 listed voltage ratings.
4. Four-pole frame with two-poles connected in parallel.

See Page V4-T2-359 for series connection diagrams. Use NEC rated cable to connect/short poles in series as shown.
Catalog Number Selection

This information is presented only as an aid to understanding catalog numbers. It is not to be used to build catalog numbers for circuit breakers or trip units.

Note: RGHDC breakers include six rear connectors as standard.

### Molded Case Switches

Eaton’s DC molded case switches are used in applications requiring a compact, high-capacity disconnect. They are UL 489 listed and have automatic high instantaneous current protection. These devices do not provide overload protection.

## Notes

1. **F-Frame circuit breakers are factory sealed. Underwriters Laboratories requires that internal accessories be installed at the factory. Internal accessories are UL listed for factory installation under E7819. Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.**

2. **Right-pole mounted. One accessory can be mounted per pole, per breaker. Factory installation of accessories is available. Contact Eaton for assistance with part number configuration.**

### Note

© Not UL Listed; Non UL listed jumpers used in a UL application may need to be qualified by the OEM in their assembly. This may take place with UL or another certified testing agency.
Wiring Diagrams

Series Connection Diagrams for DC Application

250 Vdc Maximum—Two Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

500 Vdc or 600 Vdc Maximum—Three Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

750 Vdc Maximum—Four Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

Notes

1. Poles in series connection is customer supplied. Use rated cable per NEC.
2. For grounded systems, all poles in series must be connected on non-grounded terminal, with load connected to grounded terminal.

**PVGard Solar Circuit Breakers—600 Vdc Per-Pole and 1000 Vdc Poles-in-Series**

**Product Overview**
- Two PVGard lineups
  - 600 Vdc per-pole breaker and switch. Each pole rated 600 Vdc
  - 1000 Vdc poles-in-series breaker and switch. Requires poles in series connection
- Both options UL 489B listed for solar photovoltaic circuit protection
- 50 °C calibration
- Offers both 100% and 80% rated breakers
- Handle bi-directional current flow

**Product Description**

Photovoltaic (PV) systems convert the energy of the sun into electrical power that is fed directly into the electric grid. Within the balance of system (BOS), direct current (DC) circuit breakers protect the wiring connected from the PV modules to the combiner or the inverter, while also behaving as a disconnect.

Eaton is a global leader in circuit protection and brings this expertise to bear in the photovoltaic market. PVGard solar circuit breakers are part of a product family that combines a disconnect with circuit protection in a single, compact, resettable device to protect and isolate DC circuits as needed in photovoltaic systems. PVGard breakers can replace fuses, fuse holders and disconnects in combiner box and inverter applications—saving space, streamlining design, purchasing and receiving, and reducing spare parts requirements.

There are two PVGard lineups to choose from: the industry-exclusive, 600 Vdc per-pole breakers and switches designed for residential and light commercial applications and 1000 Vdc poles-in-series breakers and switches for commercial and utility scale PV systems.

**PVGard 600 Vdc Per-Pole Lineup**

Only Eaton can offer this breakthrough breaker that will save significant space, time and cost. As a single-circuit-per-pole device, it allows space savings of up to 66% when compared to traditional poles-in-series disconnects, switches and breakers. In addition, it eliminates the need for jumpers for poles-in-series connection—saving on installation time, labor and even inventory.

**PVGard 1000 Vdc Poles-in-Series Lineup**

This 1000 Vdc poles-in-series lineup provides reliable and safe disconnect means and overcurrent protection in a single, compact device for commercial and utility scale PV systems. This solution does not require jumpers with the breaker/switch to be a UL 489B listed device, providing reliability and flexibility in design without limitation on implementation of the breaker/switch. If needed, cost-effective Eaton jumpers can be included.
2.6 Molded Case Circuit Breakers
Specialty Breakers

Application Description
Photovoltaic (PV) systems convert the energy of the sun into electrical power that is fed directly into the electric grid. PVGard circuit breakers are used to protect the wiring from the modules to the combiner box or inverter from overcurrents, and to provide an isolation mechanism.

Eaton offers a complete line of UL 489 Listed multi-purpose 600 Vdc poles-in-series breakers and switches, as well as protection for the AC side of the inverter. Refer to Page V4-T2-347 for 600 Vdc breakers and Page V4-T2-6 for AC breaker selection.

Features
PVGard breakers are uniquely designed with these features:
- Meets the higher voltage and lower fault current levels of solar systems
- Tested to extreme ambient conditions from –40ºC to +90ºC
- Full complement of accessories for status, signalling, and on/off operation remotely
- Can handle bi-directional flow of current
- Can be applied in grounded, ungrounded or bi-polar systems
- Meets and exceeds the standards of UL 489B for photovoltaic molded case circuit breakers and molded case switches
- Available both standard (80%-rated) and 100%-rated breakers
- 50ºC calibration
- Ability to open on signal from DC arc or ground fault detector
- Wide range of current ratings increases options for matching incoming strings
- Eliminates fuse stocking costs and matching issues

Standards and Certifications
- Designed to meet UL 489B for solar photovoltaic circuit protection
- UL File E350638, Category Control Number DIUR

Designed specifically for high- and low-temperature demands of PV installations, PVGard circuit breakers undergo extreme ambient cycling tests, and carry a robust operating temperature range. Trip units calibrate at 100% and 80% of nameplate current in a 50ºC ambient, ensuring continuous operation in higher temperature environments typical to solar.

Rigorous third-party testing includes limited and standard fault current tests, electrical and mechanical endurance, dielectric voltage withstand and temperature tests. Eaton’s PVGard products are stand-alone devices without requiring jumpers to be UL 489B listed devices.

PVGard breakers are available with a full complement of accessories to provide string status, enable remote trip, on/off operation, and can be customized to site requirements.
Product Selection
Catalog number includes breaker frame and trip unit. Order terminals separately. See Page V4-T2-367.
For complete internal and external accessories, see accessory section of each frame.

Special calibration—contact Eaton for availability.

**Molded Case Switches**

Eaton’s DC molded case switches (MCS) are used in applications requiring a compact, high capacity disconnect. PVGard 1000 Vdc MCS are UL 489B listed and have automatic instantaneous current protection. These devices do not provide overload protection.

**Notes**
- Base mounting hardware is included with a circuit breaker or a molded case switch (included with breaker). If required separately, order 66A2546G02.
- Individually priced.
- Locks in ON and OFF position.
- Add 20% to list price.

**Notes**

Underwriters Laboratories requires that internal accessories for the FD PV be installed at the factory. Internal accessories are UL listed for factory installation under E7819. Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.

One accessory can be mounted per pole, per breaker.

### Note

Not UL Listed; Non UL listed jumpers used in a UL application may need to be qualified by the OEM in their assembly. This may take place with UL or another certified testing agency.
2.6 Molded Case Circuit Breakers

Specialty Breakers

Technical Data and Specifications

- Thermal-magnetic circuit breakers
- Designed to meet UL 489B for solar photovoltaic circuit protection
- 100% rated of the continuous current rating
- 50 °C calibrated
- Can be applied in grounded, ungrounded or bi-polar systems
- Ability to open on signal from DC arc or ground fault detector
- Two PVGard lineups
  - UL File EE350638, Category Control Number DIUR
  - 600 Vdc per-pole breaker and switch
    - Each pole rated 600 Vdc
  - 1000 Vdc poles-in-series breaker and switch
    - Requires poles in series connection

Wiring Diagrams

*Series Connection Diagrams for DC Application*

**JF PVS, KD PVS — 600 Vdc Per-Pole**

![Diagram](image1)

Suitable for grounded or ungrounded systems. Suitable for quantity (3) 600 Vdc circuits.

**FD PV, KD PV, LG PV — 1000 Vdc Maximum — Four Poles-in-Series**

![Diagram](image2)

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

![Diagram](image3)

Suitable for use on ungrounded systems only.

**MDL PV — 1000 Vdc Maximum — Three Poles in Series**

![Diagram](image4)

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

![Diagram](image5)

Suitable for use on ungrounded systems only.

**Notes**

1. Poles in series connection is customer supplied. Use rated cable per NEC.
2. For grounded systems, all poles in series must be connected on non-grounded terminal, with load connected to grounded terminal.
E\textsuperscript{2} Mining Service Breakers

Product Overview

State-of-the-art E\textsuperscript{2} mining service breakers incorporate the rigid specifications and testing procedures developed by a focus group led by engineers from several large coal companies and Eaton design engineers. Additionally, the performance of these breakers was proven and verified during hundreds of hours of field testing in harsh mine environments.

E\textsuperscript{2} mining breakers are available in 600 Vac, 1000Y/577 Vac and 1200 Vac. Interchangeable trip units can be used on either 600 or 1000 Vac frames.

The E\textsuperscript{2} mining breaker family is designed especially for trailing cable application per MSHA 30 CFR 75. Field interchangeable electronic rms sensing trip units are available from 150 to 2000 amperes with instantaneous pickup settings conforming to the code of Federal Regulations 30 CFR 75.601-2. Electromechanical trip units are also available with a wide range of magnetic pickup ranges.

E\textsuperscript{2} electronic trip units are the first to provide the mining industry with true rms sensing, made possible by the custom ASIC microprocessor in each electronic trip unit.

E\textsuperscript{2} breakers are designed to be physically and electrically interchangeable with Classic Mining Service Breakers and supersede Series C\textsuperscript{®} Mining Service Breakers. The table to the right outlines direct replacements.

Note

\(1\) EPR/EPRM is a new frame physically different than the HPBM. See DS29-170MS.
Eaton’s mining service circuit breakers provide short-circuit protection as specified in the code of Federal Regulations 30 CFR 75.601-2. E\textsuperscript{2} 225/400 A K frame and 400/600 A L frame electronic trip units feature specifically designed instantaneous pickup settings to conform exactly with the code of Federal Regulations 30 CFR 75.601-2. Electromechanical trip units are also available with a wide range of magnetic pickup ranges.

</tr>
</tbody>
</table>

**Notes**

\textsuperscript{1} Two poles in series. DC rating applies to breakers with thermal-magnetic trip unit.

Breakers with electronic trip units are not DC rated.

\textsuperscript{2} Series rated for application with Eaton’s E\textsuperscript{2}KM and E\textsuperscript{2}LM breakers.

E2VAC Mining Vacuum Circuit Breaker

Product Overview
The Eaton E2VAC mining vacuum circuit breaker is a vacuum-based solution with advanced communications, designed to improve safety, reliability and productivity.

Available in 480, 600 and 1000 Vac styles, the E2VAC provides protection for up to 500 A in motor circuits and trailing cables. By using vacuum contactors to make and break line/load connections, the dangers of an external arc flash are eliminated while reliably switching normal load and high stress fault currents.

The E2VAC can be installed as a fixed breaker, but it is also available with remote racking capability that allows personnel to remove the breaker from service:
- While standing at a safe distance from the breaker
- Completely disconnecting the breaker from live voltage without having to depower the entire power center for maintenance

Eaton’s EDR-5000 distribution relay is fully integrated into the E2VAC breaker and provides advanced monitoring capability for real power, reactive power, power factor and frequency in addition to the standard voltage, current and phase angle measurements.

Application Description
Combining robust circuit protection and safety features with state-of-the-art monitoring capability, the E2VAC breaker is ideal for underground power center applications.

Features and Benefits
- Industry-leading vacuum interrupter (VI) technology used to eliminate the risk of external arc flash; includes VI malfunction detection
- Blown fuse detection with audible and visible indication
- Phase loss and open CT detection
- Dust-tight receptacle supplies power from the front of the breaker
- EDR-5000 distribution relay provides voltage, current and phase angle monitoring capability
- Instantaneous protection for short circuit and ground faults; phase imbalance and undervoltage protection
- Advanced user interface with LEDs and LCD screen for fault indication and keypad for programming
- Vacuum sealed contacts improve the equipment life, especially in harsh environments

Key Differentiators
- Remote racking capability greatly increases service accessibility and safety by keeping the operator at a great distance from the arc flash
- Maintenance Mode enables lower instantaneous pickups to minimize the risk of arc flash energy release during breaker service
- Advanced monitoring capability for kW, kVAR, power factor and frequency
- Reports sequence of up to 300 events and stores fault data for up to 20 faults
- Reduced footprint allows users to maximize space in the power center

Classic Mining Breakers

Product Overview

Classic mining service circuit breakers continue to be manufactured and are primarily applied to achieve an exact physical and electronic replacement of previously Cutler-Hammer installed Westinghouse equipment. To upgrade to the current offering of E² mining circuit breakers, consult the cross reference information on Page V4-T2-412.

Notes

1. Based on circuit power factor of 50% or greater.
2. HLAM must be rear stud connected. If front connected, interrupting capacity rating is 10,000 amperes.
4. Two poles in electrical series in ungrounded leg of circuit.
Classic Circuit Breakers For Mining Service

Undervoltage Release Data
Undervoltage releases are calibrated to pick up at 72 to 85% of rated voltage dropout between 35 to 70% of rated voltage.

### Notes
- Frame modified for left-hand mounting of UVR attachment.
- Frame modified for right-hand mounting of UVR attachment.
- Three-pole trip units only are suitable for replacement in 1000 volt mining service circuit breakers.
- 800 amperes.
## Terminals For Classic Mining Service Breakers
Terminals are UL listed for wire type and range listed below. When used with aluminum conductors, use joint compound.

2.6 Molded Case Circuit Breakers
Specialty Breakers

Accessories

Classic Mining Circuit Breakers

Rear Connected Studs ①
For complete stud assembly, order a stud and tube based on thickness of customer’s mounting panel. A short stud must be assembled adjacent to a long stud to maintain clearances required by Underwriters Laboratories.② Two studs required per pole. For List Prices, see Eaton’s Price and Availability Digest.

Notes
① Not UL listed.
② 400 ampere LA studs of the same length have sufficient clearance; however, customer connections may make it necessary to use a short stud adjacent to a long stud.
③ 150, 300 and 400 ampere frames only.
④ This is a special stud that includes six contact nuts for use where bus contact nuts must be used.
⑤ For breakers used with terminals and cable connections. Sold in packages of 10.
Standard Handle Reset Undervoltage Release
For Classic breakers field mountable on special frames listed on Page V4-T2-412, or replacement on breakers originally equipped with this type UVR.

For undervoltage protection. A solenoid device mounts within breaker case. Coil must be energized before closing breaker. Trips breaker when voltage drops below 35 to 70% of coil rating. Picks up and seals in at 72 to 85% of coil rating. For line voltages up to 250 Vdc or 600 Vac. Externally mounted resistors are supplied for certain ratings. Standard leads extend 18.00 inches (457.2 mm) outside of breaker. Longer leads may be specified.

Shunt Trips
For tripping breaker from a remote point. A solenoid device mounts within breaker case. Breaker trips when coil is energized. A cutoff switch breaks the circuit to the momentary rated coil when breaker opens. Available for control voltages up to 250 Vdc or 600 Vac. Voltage and frequency must be specified. Standard leads extend 18.00 inches (457.2 mm) outside of breaker. Longer leads may be specified.

Add-On Ground Fault Protection—Type GFR

Product Description
A Type GFR ground fault protection system, when properly installed on a grounded electrical system, will sense phase-to-ground fault currents. When the level of fault current is in excess of the pre-selected current pickup and time delay settings, the GFR relay will initiate a trip action of a disconnect device, which will open the faulted circuit and clear the fault.

The GFR devices are UL Class I devices designed to protect electrical equipment against extensive damage from arcing ground faults. A basic Type GFR ground fault protection system consists of a ground fault relay, a ground fault current sensor and a disconnect device equipped with a shunt trip device. This disconnect device can be a molded case circuit breaker, a power circuit breaker, a bolted pressure switch or other fusible disconnect device, suitable for application with UL Class I ground fault sensing and relaying equipment.

Note: Suitable for either surface or semi-flush mounting.

Standards and Certifications
Eaton’s GFR ground fault relays, current sensors, test panels and accessory devices are UL listed by Underwriters Laboratories in accordance with their standard for ground fault sensing and relaying equipment, UL 1053, under File E48381.

Note: Relays are also listed with CSA under their file number 43357.
Product Selection
Each installation requires:
- One relay unit (select trip ampere as required)
- One current sensor (select configuration required)
- One circuit breaker or disconnect device with shunt trip, or a shunt trip attachment for mounting in existing breaker
- Test panel (optional)

</tbody>
</table>

**Notes**
- Suitable for either surface or semi-flush mounting.
- One end removable for installation.
Specialty Breakers

Additional optional equipment can be added to the protection system to meet the requirements of the specifying engineer, including:

- Ground fault test panel
- Ground fault warning indicator relay
- Ground fault indicating ammeter

GFR relays are available with zone selective interlocking circuitry to interlock several relays within the same system. This allows the relay which detects a ground fault to instantly clear the fault by tripping the disconnect device. The relay simultaneously sends a signal to relay units “upstream” from the fault to time delay or to block their operation completely. Current sensors in various designs provide a range of “window” sizes to accommodate standard bus and cable arrangements.

Shunt trip attachments may be ordered for field mounting in Eaton’s molded case circuit breakers, or may be ordered factory installed in the breaker.

### Test Panel (120 Vac)

Used to test the ground fault system, to give an indication the relay has tripped the breaker, and to reset the relay after tripping. These functions may be separately mounted pilot devices.

**Note:** When a mechanically reset relay is used with a test panel, both the relay and test panel must be reset following either a simulated ground fault test or actual ground fault. Not UL listed.

### Ground Fault Warning Indicator

This is an accessory item for use with GFR relays with interlocking circuitry. At approximately 30–50% of the relay pickup setting, the indicator switches separate 120 Vac control power to a lamp or relay, (not included) to give an indication of a ground fault. The indicator is rated 110/120 Vac 50/60 Hz for a maximum indicator load of 0.5 amperes.

### Indicating Ammeter

The optional indicating ammeter connects to the sensor terminals through a momentary contact pushbutton, and will indicate (in amperes) any ground fault current flowing through the sensor. Kit includes the ammeter and pushbutton.

**Note:** Not UL listed.

### Shunt Trip Attachments

Use 120 Vac shunt trips.

### Faceplate

Recommended when these relays are semi-flush mounted, to close the door cutout opening.

### Technical Data and Specifications

**Sensor**
- 600 volt, 50/60 Hz maximum system voltage

**Electrical Ratings**

**GFR Relay**
- Ground fault detection ranges:
  - 1 to 12, 5 to 60 or 100 to 1200 amperes
- Output contacts:
  - 240 volt, 50/60 Hz: 3.0 amperes
  - 120 volt, 50/60 Hz: 6.0 amperes
  - 28 Vdc: 3.0 amperes
  - 125 Vdc: 0.5 amperes
- Control power requirements:
  - 120 volt, 50/60 Hz or 125 Vdc (optional)

Handle Mechanisms

Handle Mechanisms—Series G

Product Overview
Handle mechanisms are used to operate molded case circuit breakers, molded case switches and motor circuit protectors. They are available in three basic configurations—Flange Mounted, Through-the-Door and Direct (Close-Coupled)—providing safe, dependable operation and ease of installation.

Through-the-Door
- High-Performance Rotary
- Universal Rotary

Direct (Close-Coupled)
- Universal Direct

Flange Mounted
- Flex Shaft™

Handle mechanisms are used on enclosed circuit breakers, control panels and motor control centers in many different applications. Eaton has a handle mechanism for virtually any need.
High-Performance Rotary Handle Mechanisms

Product Description
The high-performance rotary handle mechanism uses a simple, yet robust design to make installation and operation easy. The external handle’s key functional components are all metallic, ensuring reliability. The metal-on-metal interface between the handle and shaft prevents contaminant buildup that could impede operation, while UV and chemical agent resistant materials protect the handle from heat and fading in direct sunlight, as well as chemicals that may be introduced in harsh environments.

Features
- NEMA Type 1/3R/12 (IP54) and NEMA Type 4/4X (IP65) ratings
- Black/Blue or Red/Yellow external handle colors
- Three shaft lengths—6, 12 and 24 inches, which can be cut to size to match enclosure depth
- Conveniently packaged as kit containing handle, shaft and mechanism
- Replacement parts are available separately
- Metallic functional components ensure reliability
- Metal-on-metal interface between handle and shaft
- UV and chemical agent-resistant materials protect the handle
- Shallow profile
- Compatible with both Series C and Series G molded case circuit breakers and molded case switch platforms
- Same handle can be used on multiple frame sizes, reducing the number of parts needed
- Red and yellow handles to designate emergency disconnecting means
- All handle mechanisms can accept padlocks or multi-hasp locks for added flexibility
- Fast, easy installation (see video on website for step-by-step instructions)

Standards and Certifications
The mechanisms for EG, JG and LG breakers have an internal handle that can be operated independent of door position, and locked-out to meet one of the key NFPA requirements (NFPA® 79) and UL 508A disconnect requirements.
- NEMA 1/3R/12, IP54
- NEMA 4/4X, IP65

In addition to its robust design features, the handle mechanism has stand-off support that allows for easy operation with a gloved hand. With a shallow profile, the handle can easily be used in applications where an internal or double door is required.

The high-performance external handle can accept padlocks or multi-hasp locks. The door is interlocked when padlocked and cannot be bypassed.

Universal Rotary

Product Description

Eaton’s Universal Rotary is suitable for use with Type 1 or 12 enclosure types. All rotary handle mechanisms include a handle “lock off” to prevent turning the breaker ON while in the OFF position, and indicate ON/OFF/Tripped/Reset positions. The Universal Rotary has the added feature of international markings for ON (I) and OFF (O). The Universal Rotary is made of molded material.

The Universal Rotary mechanisms for EG-, JG- and LG-Frame MCCBs can be operated by hand with the door open or “locked off” to prevent operation with the door open.

Standards and Certifications

Universal Rotary is UL listed and meets CSA requirements. Universal Rotary also meets IEC 60947-1 and IEC 60947-2 for international compliance. Rotary UL File Number is E64983.

### Notes
- Complete catalog number includes handle, mechanism, shaft and mounting hardware.
- Complete catalog number includes the standard handle, mechanism, shaft and support brace/bracket.
- Handle is designed suitable for NEMA Types 1, 3R and 12 enclosures. Use style number 6648C22G03 for Type 4/4X handle and add X Suffix to complete catalog number.
- Handle is cast aluminum.
- Breaker mechanism includes a shaft support bracket and its parts. Shaft is 50-inch (12.7 mm).
- Longer shafts, 16-inch (406.4 mm) and 24-inch (609.6 mm), include an adjustable support extension.
- IEC handle mechanism supplied with metric thread mounting hardware.
- Complete catalog number includes a handle, mechanism and shaft.

Direct (Close-Coupled) Handle Mechanisms

Product Description
Direct (close-coupled) handle mechanisms mount directly to the circuit breaker. They are used in shallow enclosures where the standard variable depth Through-the-door type mechanism is not practical or cannot be used.

The Universal Direct handle mechanisms are rated Type 1 and Type 12.

The Universal Direct handle mechanism is available as standard with a door interlock to prevent opening the enclosure while the circuit breaker is in the ON position. It is also available without a door interlock.

Application Description
Direct (close-coupled) handle mechanisms are typically used for applications where high volume, standardized enclosures are being fabricated.

Standards and Certifications
The Universal Direct handle mechanism is UL listed, IEC 60947-1 and IEC 60947-2 compliant, and meets CSA requirements.

### Flex Shaft

#### Product Description

*Flange-Mounted Handle Mechanisms*

Flange-mounted handle mechanisms mount on the flange of an enclosure door. The Flex Shaft is an extra heavy-duty mechanism that includes a flexible shaft in various lengths, 3 feet (0.9m) through 10 feet (3m) for use with various size enclosures.

The Flex Shaft handle will accept up to three padlock shackles, each with a maximum diameter of 3/8 inches (9.5 mm). It can be used with Type12 fabricated enclosures. An optional handle is available for Flex Shaft that is suitable for use with Type 4 environments.

Flex Shaft comes preset from the factory, requiring only minor field adjustments on installation, which takes about 10 minutes—a significant time savings compared to installation of other types of flange handle mechanisms. The Flex Shaft mechanism also takes up less interior enclosure space than competitive designs, and the handle fits standard flange cutouts. Flex Shaft handle can be remotely mounted from breaker, where an operator can use it by “funneling” the cable through conduit.

#### Standards and Certifications

Flex Shaft is UL listed under File E64983 and meets CSA requirements.

Notes

① Customer: Consult with box manufacturer for correct door hardware and any adapters required for assembly.
② The 1/4-inch x 1/2-inch (6.35 x 12.7 mm) standard mill rectangular locking bar is not supplied with these kits.
③ Third roller latch for use with 4.00- or 6.00-inch (101.6 or 152.4 mm) handle when three-point latching is required.
Handle Mechanisms

Handle Mechanisms—Series C

Product Overview
Handle mechanisms are used to operate molded case circuit breakers, molded case switches and motor circuit protectors. They are available in three basic configurations—Flange Mounted, Through-the-Door and Direct (Close-Coupled)—providing safe, dependable operation and ease of installation.

Through-the-Door
- High-Performance Rotary
- Series C Rotary
- Universal Rotary

Direct (Close-Coupled)
- Universal Direct
- Euro IEC
- G Direct

Flange Mounted
- Flex Shaft
- C371

Handle mechanisms are used on enclosed circuit breakers, control panels and motor control centers in many different applications. Eaton has a handle mechanism for virtually any need.
Through-the-Door Handle Mechanisms

Eaton’s through-the-door handle mechanisms mount on the front of an enclosure or cabinet door and externally operate the circuit breaker via a variable depth shaft or a linear operator (Type MC). Each rotary type handle mechanism includes a handle, base operating mechanism and shaft that can be cut to various lengths.

Series C Rotary and Universal Rotary handle mechanisms are for use with molded case circuit breakers (G, F, J, K, L, MDL), molded case switches and motor circuit protectors.

Type 4/4X handles are similar to standard handles except they include an internal neoprene gasket. Type 4/4X handle style number is 6648C22G03. Due to gasketing effect between the handle and the housing, the handle may not indicate a tripped position.

Universal Rotary F-Frame Direct (Close-Coupled) Handle Mechanisms

Direct (close-coupled) handle mechanisms mount directly to the circuit breaker. They are used in shallow enclosures where the standard variable depth Through-the-door type mechanism is not practical or cannot be used. They are typically for applications where high volume, standardized enclosures are being fabricated.

The Euro IEC Direct handle mechanism can be used on Flange-Mounted Handle Mechanisms

Flange-mounted handle mechanisms mount on the flange of an enclosure door. The Flex Shaft is an extra heavy-duty mechanism that includes a flexible shaft in various lengths, 3 feet (0.9m) through 10 feet (3m) for use with various size enclosures.

The Flex Shaft handle will accept up to three padlock shackles, each with a maximum diameter of 3/8-inch (9.5 mm). Can be used with NEMA 1, 3R and 12 fabricated enclosures. An optional handle is available for Flex Shaft that is suitable for use with NEMA 4 and 4X environments. Flex Shaft comes preset from the factory, requiring only minor field adjustments on installation, which takes about 10 minutes—a significant time savings compared to installation of other types of flange handle mechanisms. The Flex Shaft mechanism also takes up less interior enclosure space than competitive designs and the handle fits standard flange cutouts. Flex Shaft handle can be remotely mounted from breaker, where an operator can use it by “funneling” the cable through conduit.

The Type C371 circuit breaker operating mechanisms are designed for installation in control enclosures where main or branch circuit protective devices are required. All circuit breaker mechanisms are suitable for right-hand mounting.

Auxiliary contacts are not available for mounting on operating mechanisms. Where required, have them installed in circuit breaker.

Handle Extension

Handle extension is not included with J, K, L, M and N-Frame breakers. It must be purchased separately.

Standards and Certifications

Type C371 is UL Listed under File E62635.

Flex Shaft is UL Listed under File E64983 and meets CSA requirements.

Series C Rotary and Universal Rotary, are UL Listed and meet CSA requirements. Universal Rotary also meets IEC 60947-1 and IEC 60947-2 for international compliance. Rotary UL File Number is E64983.

The Universal Direct handle mechanism is UL 489 Listed, IEC 60947-1 and IEC 60947-2, and meets CSA requirements. The Euro IEC Direct handle mechanism is IEC-240-1. G Direct is UL Listed and meets CSA requirements.
High-Performance Rotary Handle Mechanisms

Product Description
The high-performance rotary handle mechanism uses a simple, yet robust design to make installation and operation easy. The external handle’s key functional components are all metallic, ensuring reliability. The metal-on-metal interface between the handle and shaft prevents contaminant buildup that could impede operation, while UV and chemical agent resistant materials protect the handle from heat and fading in direct sunlight, as well as chemicals that may be introduced in harsh environments.

In addition to its robust design features, the handle mechanism has stand-off support that allows for easy operation with a gloved hand. With a shallow profile, the handle can easily be used in applications where an internal or double door is required.

The high-performance external handle can accept padlocks or multi-hasp locks. The door is interlocked when padlocked and cannot be bypassed.

Features
- NEMA Type 1/3R/12 (IP54) and NEMA Type 4/4X (IP65) ratings
- Black/Blue or Red/Yellow external handle colors
- Three shaft lengths—6, 12 and 24 inches, which can be cut to size to match enclosure depth
- Conveniently packaged as kit containing handle, shaft and mechanism
- Replacement parts are available separately
- Metallic functional components ensure reliability
- Metal-on-metal interface between handle and shaft
- UV and chemical agent resistant materials protect the handle
- Shallow profile
- Compatible with both Series C and Series G molded case circuit breakers and molded case switch platforms
- Same handle can be used on multiple frames sizes reducing the number of parts needed
- Red and yellow handles to designate emergency disconnecting means
- All handle mechanisms can accept padlocks or multi-hasp locks for added flexibility
- Fast, easy installation (see video on website for step-by-step instructions)

Standards and Certifications
The mechanisms for EG, JG and LG breakers have an internal handle that can be operated independent of door position, and locked-out to meet one of the key NFPA requirements (NFPA® 79) and UL 508A disconnect requirements.

- NEMA 1/3R/12, IP54
- NEMA 4/4X, IP65

Series C Rotary

Product Description

Eaton’s through-the-door handle mechanisms mount on the front of an enclosure or a cabinet door and externally operate the circuit breaker via a variable depth shaft or a linear operator (Type MC). Each rotary type handle mechanism includes a handle, a base operating mechanism and a shaft that can be cut to various lengths.

Series C Rotary handle mechanisms are used with molded case circuit breakers (F, J, K, L, MDL), molded case switches and motor circuit protectors.

These rotary handles are robust and durable, made entirely of metal parts. It also has a lock-out tag-out level at the tip of the handle for padlocking.

NEMA Type 4/4X handles are similar to standard handles except they include an internal neoprene gasket. NEMA Type 4/4X handle style number is 6648C22G03. Due to gasketing effect between the handle and the housing, the handle may not indicate a tripped position.

### Notes

1. Complete catalog number includes the standard handle, mechanism, shaft and support brace/bracket.
2. Handle is designed suitable for NEMA Types 1, 3R and 12 enclosures. Use style number 6648C22G03 for Type 4/4X handle or add X Suffix to complete catalog number.
3. Handle is cast aluminum.
4. Breaker mechanism includes a shaft support bracket and its parts. Shaft is 0.50-inch (12.7 mm).
5. Longer shafts, 16-inch (406.4 mm) and 24-inch (609.6 mm), include an adjustable support extension.
6. IEC handle mechanism supplied with metric thread mounting hardware.
7. Complete catalog number includes a handle, mechanism and shaft.
2.7 Molded Case Circuit Breakers

Handle Mechanisms

Universal Rotary

Product Description

Eaton’s Universal Rotary is suitable for use with Type 1 or 12 enclosure types. All rotary handle mechanisms include a handle “lock off” to prevent turning the breaker ON while in the OFF position, and indicate ON/OFF/Tripped/Reset positions. The Universal Rotary has the added feature of international markings for ON (I) and OFF (O). The Universal Rotary is made of molded material.

The Universal Rotary mechanisms for EG-, JG- and LG-Frame MCCBs can be operated by hand with the door open or “locked off” to prevent operation with the door open.

Standards and Certifications

Universal Rotary is UL listed and meets CSA requirements. Universal Rotary also meets IEC 60947-1 and IEC 60947-2 for international compliance. Rotary UL File Number is E64963.

**Note**

① Only available as complete handle mechanism. Parts not sold separately.
Direct (Close-Coupled) Handle Mechanisms

**Product Description**
Direct (close-coupled) handle mechanisms mount directly to the circuit breaker. They are used in shallow enclosures where the standard variable depth Through-the-door type mechanism is not practical or cannot be used.

The Universal Direct handle mechanisms are rated Type 1 and Type 12.

The Universal Direct handle mechanism is available as standard with a door interlock to prevent opening the enclosure while the circuit breaker is in the ON position. It is also available without a door interlock.

**Application Description**
Direct (close-coupled) handle mechanisms are typically used for applications where high volume, standardized enclosures are being fabricated.

**Standards and Certifications**
The Universal Direct handle mechanism is IEC 60947-1 and IEC 60947-2 compliant.

Handle Mechanisms

Flex Shaft

Product Description

**Flange-Mounted Handle Mechanisms**

Flange-mounted handle mechanisms mount on the flange of an enclosure door. The Flex Shaft is an extra heavy-duty mechanism that includes a flexible shaft in various lengths, 3 feet (0.9m) through 10 feet (3m) for use with various size enclosures.

The Flex Shaft handle will accept up to three padlock shackles, each with a maximum diameter of 3/8 inches (9.5 mm). It can be used with Type12 fabricated enclosures. An optional handle is available for Flex Shaft that is suitable for use with Type 4 environments.

Flex Shaft comes preset from the factory, requiring only minor field adjustments on installation, which takes about 10 minutes—a significant time savings compared to installation of other types of flange handle mechanisms. The Flex Shaft mechanism also takes up less interior enclosure space than competitive designs, and the handle fits standard flange cutouts. Flex Shaft handle can be remotely mounted from breaker, where an operator can use it by “funneling” the cable through conduit.

**Standards and Certifications**

Flex Shaft is UL listed under File E64983 and meets CSA requirements.

</tbody>
</table>

**Notes**

1. Suitable for GC/GD MCCB; not suitable for GMC.
2. For increased maximum allowable depth, see connecting rods on Page V4-T2-446.
3. Dimensions shown are from panel flange surface.
4. Does not include handle.

When selecting the length of shaft, ensure minimum bending radius of 4 inches (101.6 mm) is maintained to operate properly. The standard method of shipment includes the mechanism preset at the factory; however, minor field adjustments may be required.

Dual breaker operator available on F-Frame only. Only the F, J and K can mount LH and RH all other RH only.
