Reason For Change	Manufacturing Process Change	
Change Description	This is to inform you that Molex is changing the plating thickness from (3 to 7 microns) to (2 to 4 microns) on 990010050 material strip for its Modular Jacks product range. The reason for this is due to a process improvement as this material is hot tin dipped and the higher tin level can cause pitting on the surface. This change will have no affect on the functional or electrical performance of the product.
