3.3V/5V Logic Gate Output Optocoupler with High Noise Immunity

Features

- High-noise Immunity Characterized by Common Mode Rejection
 - 20 kV/ μ s Minimum Common Mode Rejection
- High Speed
 - 20 Mbit/s Data Rate (NRZ)
 - 55 ns Maximum Propagation Delay
 - 20 ns Maximum Pulse Width Distortion
 - 30 ns Maximum Propagation Delay Skew
- 3.3 V and 5 V CMOS Compatibility
- Specifications Guaranteed Over 3 V to 5.5 V Supply Voltage and -40°C to +110°C Temperature Range
- Safety and Regulatory Approvals:
 - UL1577, 3750 VAC_{RMS} for 1 Minute
 - DIN EN/IEC60747-5-5

Applications

- Microprocessor System Interface:
 - SPI, I²C
- Industrial Fieldbus Communications:
 - DeviceNet, CAN, RS485
- Programmable Logic Control
- Isolated Data Acquisition System
- Voltage Level Translator

Description

The FODM8071 is a 3.3V/5V high-speed logic gate output optocoupler, which supports isolated communications allowing digital signals to communicate between systems without conducting ground loops or hazardous voltages. It utilizes Fairchild's patented coplanar packaging technology, Optoplanar[®], and optimized IC design to achieve high-immunity, characterized by high common mode rejection specifications.

This high-speed logic gate output optocoupler, housed in a compact 5-pin Mini-Flat package, consists of a high-speed AlGaAs LED at the input coupled to a CMOS detector IC at the output. The detector IC comprises an integrated photodiode, a high-speed transimpedance amplifier and a voltage comparator with an output driver. The CMOS technology coupled with a high-efficiency LED achieves low power consumption as well as very high speed (55 ns propagation delay, 20 ns pulse width distortion).

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only. T_A = 25°C unless otherwise specified.

Notes:

- Derate linearly from 95°C at a rate of -1.4 mW/°C
- Derate linearly from 100°C at a rate of -3.47 mW/°C.
- Functional operation under these conditions is not implied. Permanent damage may occur if the device is subjected to conditions outside these ratings.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

| $ CM_L $ | Common Mode Transient Immunity at Output Low | $I_F = 5\text{ mA}$, $V_O < 0.8\text{ V}$, $V_{CM} = 1000\text{ V}$, $T_A = 25^{\circ}\text{C}$, (Figure 14) ⁽⁸⁾ | 20 | 40 | | kV/ μs |
| C_{PDDO} | Output Dynamic Power Dissipation Capacitance ⁽⁹⁾ | | | 4 | | pF |

Notes:

- Data rate is based on 10 MHz, 50% NRZ pattern with a 50 nsec minimum bit time.
- t_{PSK} is equal to the magnitude of the worst case difference in t_{PHL} and/or t_{PLH} that will be seen between any two units from the same manufacturing date code that are operated at same case temperature ($\pm 5^{\circ}\text{C}$), at the same operating conditions, with equal loads ($R_L = 350\ \Omega$ and $C_L = 15\text{ pF}$), and with an input rise time less than 5 ns.
- Common mode transient immunity at output high is the maximum tolerable positive dV_{cm}/dt on the leading edge of the common mode impulse signal, V_{cm} , to assure that the output will remain high. Common mode transient immunity at output low is the maximum tolerable negative dV_{cm}/dt on the trailing edge of the common pulse signal, V_{cm} , to assure that the output will remain low.
- Unloaded dynamic power dissipation is calculated as follows: $C_{PD} \times V_{DD} \times f + I_{DD} + V_{PD}$ where f is switched time in MHz.

Isolation Characteristics

| Symbol | Parameter | Conditions | Min. | Typ. | Max. | Unit |
|-----------|--------------------------------|--|-----------|------|------|----------------|
| V_{ISO} | Input-Output Isolation Voltage | $f = 60\text{ Hz}$, $t = 1.0\text{ minute}$, $I_{I-O} \leq 10\ \mu\text{A}$ ⁽¹⁰⁾⁽¹¹⁾ | 3750 | | | $V_{AC_{RMS}}$ |
| R_{ISO} | Isolation Resistance | $V_{I-O} = 500\text{ V}$ ⁽¹⁰⁾ | 10^{11} | | | Ω |
| C_{ISO} | Isolation Capacitance | $V_{I-O} = 0\text{ V}$, $f = 1.0\text{ MHz}$ ⁽¹⁰⁾ | | 0.2 | | pF |

Notes:

- Device is considered a two terminal device: pins 1, and 3 are shorted together and pins 4, 5, and 6 are shorted together.
- $11.3,750\text{ V}_{AC_{RMS}}$ for 1 minute duration is equivalent to $4,500\text{ V}_{AC_{RMS}}$ for 1 second duration.

AUTHORIZED USE

Unless otherwise specified in this data sheet, this product is a standard commercial product and is not intended for use in applications that require extraordinary levels of quality and reliability. This product may not be used in the following applications, unless specifically approved in writing by a Fairchild officer: (1) automotive or other transportation, (2) military/aerospace, (3) any safety critical application – including life critical medical equipment – where the failure of the Fairchild product reasonably would be expected to result in personal injury, death or property damage. Customer's use of this product is subject to agreement of this Authorized Use policy. In the event of an unauthorized use of Fairchild's product, Fairchild accepts no liability in the event of product failure. In other respects, this product shall be subject to Fairchild's Worldwide Terms and Conditions of Sale, unless a separate agreement has been signed by both Parties.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Terms of Use

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
