Motion SPM® 2 Series

Features

- UL Certified No. E209204 (UL1557)
- 600 V - 30 A 3-Phase IGBT Inverter with Integral Gate Drivers and Protection
- Low-Loss, Short-Circuit Rated IGBTs
- Low Thermal Resistance Using Ceramic Substrate
- Separate Open-Emitter Pins from Low Side IGBTs for Three-Phase Current Sensing
- Single-Grounded Power Supply
- Optimized for 15 kHz Switching Frequency
- Built-in NTC Thermistor for Temperature Monitoring
- Inverter Power Rating of 2.4 kW / 100~253 VAC
- Adjustable Current Protection Level via Selection of Sense-IGBT Emitter's External Rs
- Isolation Rating: 2500 V_{rms} / min.

Applications

- Motion Control - Home Appliance / Industrial Motor

Resource

- [AN-9043 - Motion SPM® 2 Series User's Guide](#)

General Description

FSAM30SH60A is a Motion SPM® 2 module providing a fully-featured, high-performance inverter stage for AC Induction, BLDC, and PMSM motors. These modules integrate optimized gate drive of the built-in IGBTs to minimize EMI and losses, while also providing multiple on-module protection features including under-voltage lockouts, over-current shutdown, thermal monitoring, and fault reporting. The built-in, high-speed HVIC requires only a single supply voltage and translates the incoming logic-level gate inputs to the high-voltage, high-current drive signals required to properly drive the module's internal IGBTs. Separate negative IGBT terminals are available for each phase to support the widest variety of control algorithms.

Integrated Power Functions

- 600V - 30 A IGBT inverter for three-phase DC / AC power conversion (please refer to Figure 3)

Integrated Drive, Protection and System Control Functions

- For inverter high-side IGBTs: gate drive circuit, high-voltage isolated high-speed level shifting control circuit Under-Voltage Lock-Out (UVLO) Protection
 Note) Available bootstrap circuit example is given in Figures 13 and 14.
- For inverter low-side IGBTs: gate drive circuit, Short-Circuit Protection (SCP) control supply circuit Under-Voltage Lock-Out (UVLO) Protection
- Temperature Monitoring: system temperature monitoring using built-in thermistor
 Note) Available temperature monitoring circuit is given in Figure 14.
- Fault signaling: corresponding to a SC fault (low-side IGBTs) and UV fault (low-side control supply)
- Input interface: active-LOW Interface, works with 3.3 / 5 V logic, Schmitt-trigger input

1st Notes:

1. Inverter low-side is composed of three sense-IGBTs including freewheeling diodes for each IGBT and one control IC which has gate driving, current-sensing and protection functions.
2. Inverter power side is composed of four inverter DC-link input pins and three inverter output pins.
3. Inverter high-side is composed of three normal-IGBTs including freewheeling diodes and three drive ICs for each IGBT.

Absolute Maximum Ratings (T_J = 25°C, unless otherwise specified.)

Inverter Part

Item	Symbol	Condition	Rating	Unit
Supply Voltage	V _{DC}	Applied to DC-Link	450	V
Supply Voltage (Surge)	V _{PN(Surge)}	Applied between P and N	500	V
Collector - Emitter Voltage	V _{CES}		600	V
Each IGBT Collector Current	± I _C	T _C = 25°C	30	A
Each IGBT Collector Current	± I _C	T _C = 100°C	15	A
Each IGBT Collector Current (Peak)	± I _{CP}	T _C = 25°C, Under 1ms Pulse Width	60	A
Collector Dissipation	P _C	T _C = 25°C per Chip	62	W
Operating Junction Temperature	T _J	(2nd Note 1)	-20 ~ 125	°C

2nd Notes:

1. It would be recommended that the average junction temperature should be limited to T_J ≤ 125°C (at T_C ≤ 100°C) in order to guarantee safe operation.

Control Part

Item	Symbol	Condition	Rating	Unit
Control Supply Voltage	V _{CC}	Applied between V _{CC(UH)} , V _{CC(VH)} , V _{CC(WH)} - COM _(H) , V _{CC(L)} - COM _(L)	20	V

2nd Notes:

5. Short-circuit protection is functioning only at the low-sides. It would be recommended that the value of the external sensing resistor (R_{SC}) should be selected around 50 Ω in order to make the SC trip-level of about 45A. at the shunt resistors (R_{SU}, R_{SV}, R_{SW}) of 0 Ω. For the detailed information about the relationship between the external sensing resistor (R_{SC}) and the shunt resistors (R_{SU}, R_{SV}, R_{SW}), please see Figure 6.
6. The fault-out pulse width t_{FOD} depends on the capacitance value of C_{FOD} according to the following approximate equation: C_{FOD} = 18.3 × 10⁻⁶ × t_{FOD} [F]
7. T_{TH} is the temperature of thermistor itself. To know case temperature (T_C), please make the experiment considering your application.

2nd Notes:

- 9. Do not make over torque or mounting screws. Much mounting torque may cause ceramic substrate cracks and bolts and Al heat-sink destruction.
- 10. Avoid one side tightening stress. Figure 8 shows the recommended torque order for mounting screws. Uneven mounting can cause the Motion SPM® 2 package ceramic substrate to be damaged.

3rd Notes:

1. It would be recommended that by-pass capacitors for the gating input signals, $IN_{(UL)}$, $IN_{(VL)}$, $IN_{(WL)}$, $IN_{(UH)}$, $IN_{(VH)}$ and $IN_{(WH)}$ should be placed on the Motion SPM® 2 product pins and on the both sides of MCU and Motion SPM 2 Product for the fault output signal, V_{FO} , as close as possible.
2. The logic input works with standard CMOS or LSTTL outputs.
3. $R_{PL}C_{PL}/R_{PH}C_{PH}/R_{PF}C_{PF}$ coupling at each Motion SPM 2 product input is recommended in order to prevent input/output signals' oscillation and it should be as close as possible to each of Motion SPM 2 Product pins.

Figure 13. Recommended Bootstrap Operation Circuit and Parameters

3rd Notes:

4. It would be recommended that the bootstrap diode, D_{BS} , has soft and fast recovery characteristics.
5. The ceramic capacitor placed between V_{CC} - COM should be over $0.1 \mu F$ and mounted as close to the pins of the Motion SPM[®] 2 product as possible.

Figure 14. Application Circuit

4th Notes:

1. $R_{PI}C_{PI}/R_{PH}C_{PH}/R_{PF}C_{PF}$ coupling at each Motion SPM® 2 product input is recommended in order to prevent input signals' oscillation and it should be as close as possible to each Motion SPM 2 product input pin.
2. By virtue of integrating an application specific type HVIC inside the Motion SPM 2 product, direct coupling to MCU terminals without any optocoupler or transformer isolation is possible.
3. V_{FO} output is open-collector type. This signal line should be pulled up to the positive side of the 5 V power supply with approximately 4.7 kΩ resistance. Please refer to Figure 12.
4. C_{SP15} of around seven times larger than bootstrap capacitor C_{BS} is recommended.
5. V_{FO} output pulse width should be determined by connecting an external capacitor (C_{FOD}) between C_{FOD} (pin 8) and $COM(L)$ (pin 2). (Example : if $C_{FOD} = 33$ nF, then $t_{FO} = 1.8$ ms (typ.)) Please refer to the 2nd note 6 for calculation method.
6. Each input signal line should be pulled up to the 5 V power supply with approximately 4.7 kΩ (at high side input) or 2 kΩ (at low side input) resistance (other RC coupling circuits at each input may be needed depending on the PWM control scheme used and on the wiring impedance of the system's printed circuit board). Approximately a 0.22 ~ 2 nF by-pass capacitor should be used across each power supply connection terminals.
7. To prevent errors of the protection function, the wiring around R_{SC} , R_F and C_{SC} should be as short as possible.
8. In the short-circuit protection circuit, please select the $R_F C_{SC}$ time constant in the range 3 ~ 4 μs.
9. Each capacitor should be mounted as close to the pins of the Motion SPM 2 product as possible.
10. To prevent surge destruction, the wiring between the smoothing capacitor and the P & N pins should be as short as possible. The use of a high frequency non-inductive capacitor of around 0.1 ~ 0.22 μF between the P&N pins is recommended.
11. Relays are used at almost every systems of electrical equipments of home appliances. In these cases, there should be sufficient distance between the MCU and the relays. It is recommended that the distance be 5 cm at least.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
