**Features:**

- Quick and Simple to Install
- Up to 500m range outdoor
- Up to 50-100m range in buildings*
- Reliable high end radio link
- High Quality UK manufacture
- Weatherproof IP65 Enclosures
- Easy Connection with Screw Terminals
- Supplied pre-configured ready to operate

**Applications:**

- Switched live cable replacement
- Thermostat cable replacement

**Description**

The RF Solutions **MAINSLINK** is designed to offer a solution to switched live cabling. When a cable run is awkward or expensive to achieve, the **MAINSLINK** can be used, saving time and money.

**Ordering Information**

</tr>
</tbody>
</table>

*Range tested to 100m through 2 brick walls at 1m above ground.
**Cable Connections**

**MAINSLINK** is very easy to connect, simply wire as follows:

**MAINSLINK-TX - Transmitter:**
1. Run a switched Live from your external device or switch to the MAINSLINK-TX Transmitter and connect into the screw terminal marked: L (Live)
2. Run a Neutral to the MAINSLINK-TX and connect to the terminal marked N (Neutral).

   AS SHOWN IN FIG. 1.1

**MAINSLINK-RX - Receiver:**
1. Connect the Supply:
   LIVE, NEUTRAL and EARTH.
   Connect the Live to the screw terminal marked: LIVE then connect the NEUTRAL and EARTH respectively.
2. Connect the LOAD to the receiver and wire in as required.
3. In most applications the LOAD would be wired as shown in FIG. 1.2

**Important Notes:**
- All mains powered units must be earthed
- Hardwired units must be connected via an isolating switch
- See Safety information on page 5 before installing
Dimensions and Wall mounting information:
MAINSLINK is a professional use product and should only be installed by a competent person.

Fixing Instructions:
1. Fix the rear of the MAINSLINK enclosure to the wall using the template above.
2. Ensure that all fixing screws are screwed flush to the enclosure.
3. Ensure that the screw covers are put in place. These ensure water proofing and insulate the PCB from the wall fixing screws. Screw Covers are found inside the rear of the enclosure.
4. Once the enclosure is fixed to the wall, screw the on front plate with the PCB in place.
Pairing a Receiver

**NOTE:** MAINSLINK Systems are supplied pre-paired. This process is described for advanced use only.

To pair the MAINSLINK-RX it must have a 230Vac supply connected.

1. Briefly place a magnet on the receiver by the MAINSLINK-RX as shown in FIG 1.3.
   This will put the system in learn mode.

2. When the receiver is in learn mode you will need to pair the transmitter within 10 seconds. To do this you must apply the 230Vac supply to the transmitter for 2 seconds and then turn it off.

3. Allow 15 seconds the receiver to return to normal operation.

Erasing a Receiver

To erase all transmitters from the MAINSLINK-RX hold a magnet beside the learn switch for 10 seconds as shown in FIG 1.4.

**NOTE:** You cannot erase individual MAINSLINK-TX units.
Power Supply
The MAINSLINK is designed to operate between 110-230V in a fixed installation. Before removing the cover on either Transmitter or Receiver ensure that the mains input supply is isolated. Maintenance to the product that involves removal of the cover should only be carried out by a competent person or qualified electrician.

Operational Features and Advanced Instructions:
System Communication:
The MAINSLINK-TX transmitter automatically sends its status to the MAINSLINK-RX Receiver every time the SWITCHED LIVE wired into the TX becomes active. The MAINSLINK-RX receiver then mirrors the MAINSLINK-TX Transmitters’ status.

Fail safe “Watchdog” feature
In the case of a power failure on the MAINSLINK-TX the “watchdog” ensures that the receiver relay is dropped out. This is done by sending a pulsed signal update every 20 seconds which must be received to keep the relay active. This can be enabled or disabled as shown in FIG 2.1.

NOTE: This feature only drops the receiver relay out - it does not bring it on again after power recovery.

Multiple system operation:
Each MAINSLINK transmitter is uniquely coded, this means that no two systems will cross operate by default. If multiple transmitters or receivers are required to work together the MAINSLINK can be programmed to work together.

One to Many Operation:
To pair a transmitter of receivers together the following process must be done:
1) Apply power to MAINSLINK-RX (once powered do not touch the PCB!)  
2) Pass a magnet close to the magnetic learn switch, you should see an LED start to flash  
3) Whilst this LED is flashing apply power to the MAINSLINK-TX and then power unit off  
4) MAINSLINK-RX will stop flashing its LED  
5) Your MAINSLINK-TX will now operate your MAINSLINK-RX  
6) Pairing complete

Advanced Tip: It is not recommended to have too many systems operating in one location however, as effective operation could become compromised.
Technical Specification:

Dimensions: 88 x 88 x 54mm (see page 3)
Storage Temperature: -10 to +70°Celsius.
Operating Temperature: 0 to +50°Celsius.

*MAINSLINK uses RF Solutions APLHA range of radio modules. For further transmission information see the relevant datasheet.

RF Solutions Ltd. Recycling Notice
Meets the following EC Directives:

DO NOT
Discard with normal waste, please recycle.

ROHS Directive 2002/95/EC
Specifies certain limits for hazardous substances.

WEEE Directive 2002/96/EC
Waste electrical & electronic equipment. This product must be disposed of through a licensed WEEE collection point. RF Solutions Ltd., fulfills its WEEE obligations by membership of an approved compliance scheme.

Waste Batteries and Accumulators Directive 2006/66/EC
Where batteries are fitted, before recycling the product, the batteries must be removed and disposed of at a licensed collection point.

Environment Agency producer registration number: WEE/JB0104WV.
