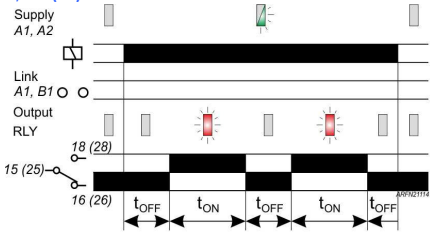
# Type: LRTM/2

## Asymmetrical Recycling / Delayed Pulse Timer

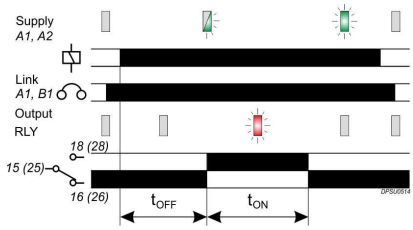
- ***NEW*** **17.5mm DIN rail housing**
- **Microprocessor based**
- **Dual Function - Asymmetrical recycling "Off/On" AF or Delayed Pulse DP**
- **Separate adjustments for "on" and "off" ranges**
- **7 Selectable time ranges (0.1 seconds – 100 hours)**
- **Fine adjustment of selected time range**
- **Multi-voltage input (12 – 230V AC/DC)**
- **DPDT relay output 8A**
- **Green LED indication for supply / timing status**
- **Red LED indication for relay status**
- **Conforms to IEC 61812**

## FUNCTION DIAGRAMS

Asymmetrical Recycling Off / On **(AF)**



Delayed Pulse **(DP)**
(terminals A1 and B1 linked)



*LED operation:* LED Off · LED On · LED Flashing

## INSTALLATION AND SETTING

Installation work must be carried out by qualified personnel.

- BEFORE INSTALLATION, ISOLATE THE SUPPLY.
- Connect the unit as required.
- If the Delayed Pulse function is required, place a link between terminals A1 and B1.

*Setting the unit.*

- Set the "$t_{OFF}$" ❹ and "$t_{ON}$" ❻ "Range" selectors to the required position (depending on whether seconds, minutes or hours are required).
- Set the "Set %" adjustment for the "$t_{OFF}$" ❸ and "$t_{ON}$" ❺ as required. The "Set %" is a % of the selected range, so 60% of the 1 – 10 hour range will give 6 hours.

*Applying power.*

- Apply power and the green LED ❶ will start flashing to indicate timing is in progress.
- The red relay LED ❷ will illuminate to indicate the relay is the energised state when the "$t_{ON}$" delay is running.
- When the "$t_{OFF}$" delay is running and relay is de-energised, the red LED will remain extinguished.
- If the Delayed Pulse function is selected, the green LED will stop flashing and remain illuminated when the relay de-energises after the "$t_{ON}$" period.

*Note:*

*[1] In accordance with IEC 61812, the green LED is permitted to extinguish during a voltage dip or momentary interruption of the power supply providing the state of the output relay does not change.*

*[2] The dip / interruption (reset) duration and levels are defined in the product standard however, the standard allows for these to be different from the levels actually specified.*
