

Mini HD Quad & Switcher

More than just a Quad, The HandyQuad™ TVI has 7 display modes!

The new HD HandyQuad is a great choice for any CCTV or AV engineer to distribute and display up to 4 video or CCTV signals to 4 monitors simultaneously. Compatible with analogue as well as HD-TVI and AHD technologies, it's a useful device to take on a job as it produces 7 different viewing displays including Picture-In-Picture and a 2 way vertical split screen.

A built-in sequential switcher means you can use it as a basic switching device on 2 standard DVR monitors, via a BNC connection. Or connect up to 2 additional monitors via a VGA and HDMI connection to have 4 monitors!

The HandyQuad is low cost, easy to fit either on a wall or desk mount and its low current consumption makes it economical to run and convenient to share a power supply with other 12V DC equipment such as a CCTV camera.
