## Phase-out of various products

### General

SCHURTER continuously complements and optimizes its range. Thanks to new technologies, innovative ideas and targeted investments, new and qualitatively improved products are being developed.

At the same time certain types or variants reach the end of their product life cycle and show a decreasing market demand. For this reason, SCHURTER adjusts its product range and discontinues doublets as well as those with low demand.

See "Affected Products" on page 3 for a list of the types and variants that have been discontinued with the last possible ordering dates. Where this is available, a replacement type is specified which is optimally adapted to current and future requirements.

With this sales info, we would like to give our sales partners the opportunity to react at an early stage and to dispose their needs with their customers.

### Phase-out Procedure / Time Schedule

The data sheets of the affected types on the SCHURTER website will be marked with a phase-out symbol. In addition, the most recent order date as well as a link to the alternative type will be given. In SAP, the material or sales status will be set to " Del. material with substitute" or " Del. material without substitute" and an MD04 sales text will be integrated.

Complementary to the list of affected products (page 3), you will find an Excel list with all article numbers in the attachment of this mail and/or as a download in "Partner Services" [1].

## Activities Sales

To keep this phase-out process proceeding smoothly, we kindly ask the sales representatives to clarify with their customers the all-time requirements and possible alternatives. Corresponding orders must be received by SCHURTER no later than the order date indicated.

Best regards,

Christian von Arb
