

REMOTELINK IR

By Connecting any HDMI source to any Antiference HD Modulator and then into the **REMOTELINK IR** you will be able to view your HDMI source on your Freeview HD TV and also be able to control the source in any room. (Also compatible with our SD modulator range) Connect your HDMI source into the modulator using a HDMI lead, from the Modulators output go to the aerial input on the REMOTELINK IR, position the REMOTELINK IR's emitter over the source devices IR. From the output of the REMOTELINK IR you go into a Bi-directional amplifier (Antiference REMOTELINK or DA amplifiers) and then connect the outputs to our magic eye (ME200) this will allow you full control of your source device.
