

NightWatcher

LED Robotic Security Light with Wi-Fi HD Camera & SD Recorder

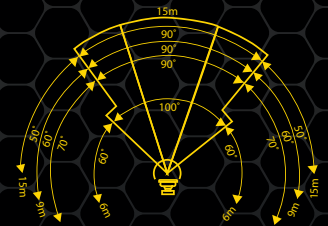

The super-bright security light that locks on and tracks intruders.

The NightWatcher Security Light is a proven and effective method of deterring intruders from entering your home or business. The NightWatcher is a patented motion tracking feature, built into a PIR lamp.

The NightWatcher NW760 detects motion within the 220° field of vision of the PIR and turns the lamp and camera to point directly at and then follow the intruder. When motion is detected, the super-bright 16W LED will light up at night and the built-in HD camera records video to the SD card 24/7. You can also view and record live video on your smartphone via the free app and while you are away, receive push alarm alerts when motion is detected and review recorded footage.*

Easy setup for remote access

Features

- From your smartphone you can view your camera and receive push alerts when motion is detected.**
- Built-in 720p camera records video to built-in SD recorder
- Powerful yet energy saving 16 Watt COB LED designed to deliver a bright 1,600 lumens output
- Robotic head rotates left and right with total movement of 210°
- Supplied with 8GB SD card (maximum storage capacity 32GB)
- Available in black or white

Specifications

- **Detection Method** Passive Infrared Sensor (continuous detect function)
- **Material** Cast metal/Plastic
- **Power Supply** AC240V 50Hz
- **Light Rotation Angle** 220°
- **PIR Direction Area** 15m x 210° (maximum)
- **Watts** 16W
- **Light-up Time** 3 Minutes (return to centre)
- **Waterproof Rating** IP55

* iOS and Android app available (Wi-Fi or 3G/4G connection required)
** NW760 requires a Wi-Fi connection
