## Retroreflective area sensor

# RLG28-55/40a/73c/136

**Dimensions** 

**VISC**� CE US

#### **Model Number**

#### RLG28-55/40a/73c/136

Retroreflective area sensor with 4-pin, M12 x 1 connector

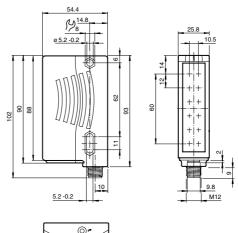

#### **Features**

- Retro-reflective area sensor with 6 light beams in standard photoelectricsensor enclosure
- Connection compatibly replaces single beam photoelectric sensor
- Reliable detection of the front edge of ٠ the object irrespective of its shape and position
- Constant object detection from 12 mm within the entire detection area
- Reliable detection of all surfaces irrespective of the object texture
- Switches when contrast difference • 10%
- Bright, highly visible transmitter be-. ams, guarantee convenient alignment of the sensor

#### **Product information**

The RLG28 retro-reflective area sensor contains several transmitters and receivers in one housing and with a reflector positioned opposite forms a 60 mm detection area over a sensing range of 4 m.

When the light beams are interrupted by an object, the switching function is triggered. The smallest detectable object size is 12 mm. The RLG28 switches at a 10% contrast difference with a response time of 1 ms. An intelligent gain control compensates for effects such as dirt, misalignment, and temperature.

#### Mounting:

Ensure that the red light transmitted by the sensor fully illuminates the reflector. To ensure optimal detection, the entire 60 mm detection field must appear on the reflector.

Refer to "General Notes Relating to Pepperl+Fuchs Product Information" USA: +1 330 486 0001

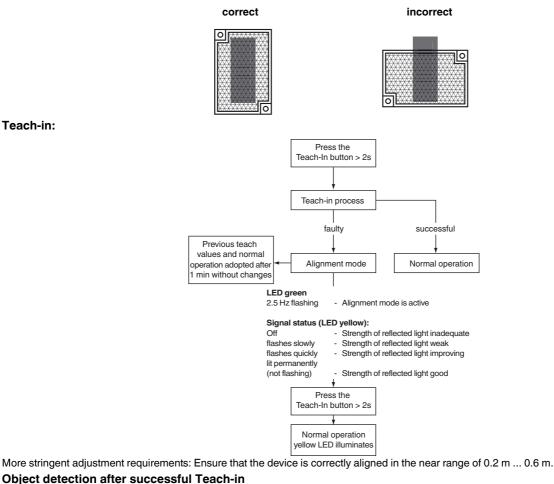

2

Germany: +49 621 776 4411 fa-info@de.pepperl-fuchs.com

Singapore: +65 6779 9091 fa-info@sg.pepperl-fuchs.com

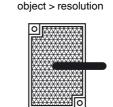

To check this illumination, look at the reflector from over the top of the sensor housing.

The target should be large enough so that the reflector is always completely covered in one dimension!

optimal

object = resolution

#### Signal tracking:

- Active:
- At variable temperature
- Objects located in the light path that lie below the switching point. These objects result in a readjustment of the emitter. This allows these objects to be taught in or taught out.
- Inactive:
- · Function not available

To alter the signal tracking, press the Teach-in button for >10 seconds. The current status is displayed. Briefly pressing the Teach-in button changes the mode.

Press the Teach-in button > 10 seconds Signal tracking switch mode Press the Teach-in Yellow LED 1 Hz button Mode is changed Flashes once Tracking on Flashes twice Tracking off Reverts back to normal mode after 5 seconds if no changes are made Refer to "General Notes Relating to Pepperl+Fuchs Product Information"
