Mains supplies & power distribution systems

- Advanced protectors for mains supplies and power distribution systems.
- ♦ On single phase supplies of 200-280 volts, use ESP 240 M1.
- ♦ For three phase supplies of 346-484 volts, use ESP 415 M1.

Application

Use on mains power distribution systems to protect connected electronic equipment from transient overvoltages on the mains supply, eg computer, communications or control equipment.

An ESP 415 M1 mounted, within a WBX 4 enclosure, directly alongside a mains panel and connected to its first outgoing way. Note how the protector is mounted on its side to help keep its connecting leads as short as possible.

Features and benefits

- Very low let-through voltage between all sets of conductors (phase to neutral, phase to earth and neutral to earth).
- ✓ Maximum surge current greatly in excess of the 10kA worst case indicated in BS 6651 and IEEE C62.41.
- Repeated protection in lightning intense environments with 20 years predicted lifetime.
- ✓ Innovative new Sovtrip™ multiple thermal disconnect technology, anticipates standards authorities' future demands, for safe disconnection from faulty or abnormal supplies (without compromising protective performance).
- ✓ Three way visual indication of protection status.
- ✓ Advanced pre-failure warning so you need never be unprotected.
- Remote indication facility allows pre-failure warning to be linked to a building management system, buzzer or light.

ESP 415 M1 installed within a control panel on the mains input to protect the panel's control systems. Note the remote indication connection (top of protector).

On applications requiring an extra high maximum surge current, use the ESP 415 M2 or ESP 415 M4. For supplies fused at 16 amps or less, use the ESP ***/5A or /16A boxed or unboxed protectors. Where the display panel needs to be mounted separately from the main protector, use the ESP 415 M1R.

- ✓ Changeover active volt free contact enables the protector to be used to warn of phase loss (ie power failure, blown fuses etc).
- Unique flashing warning of potentially fatal neutral to earth supply faults (caused by incorrect earthing, wiring errors or unbalanced conditions).
- Robust steel housing.
- ✓ Simple parallel connection.
- ✔ Base provides ultra low inductance earth bond to metal panels.
- ✓ Compact size for installation in the power distribution board.
- Maintenance free.

Installation

Install in parallel, within the power distribution board or directly on to the supply feeding equipment.

At distribution boards, the protector can be installed either on the load side of the incoming isolator, or on the closest outgoing way to the incoming supply. Connect, with very short connecting leads, to phase(s), neutral and earth. On supplies over 100 amps, phase/live connecting leads should be fused with either 63 or 100 amp high rupture capacity (HRC) fuses, a switchfuse, MCCB or type 'C' MCB.

Electrical specification

	ESP 120 M1	ESP 208 M1	ESP 240 M1	ESP 415 M1			
Nominal voltage (RMS)	120V	208V	240V	415V
