

Extra Heavy Duty Bottom Mount Slides

Notes

1. Catalog number D-1054 designates the same slide as D-1050, however, the D-1054 slide locks at the fully closed position (LI) and at the fully extended position (LO).
2. Stationary section is designed for mounting from the bottom (threaded holes). If application requires mounting stationary section from the top side, order optional mounting plates.
3. Slide operates on solid rollers for vertical alignment and ball bearings for horizontal thrust.
4. Measured in the closed (retracted) position.
5. Load capacity is based on one slide at full extension with the load (center of gravity) at the midpoint of the slide (chassis section).

Catalog Number	A	B	C	D	E	F	G	H	J	K	L	M	Load Capacity

- For increased load capacity, multiply the number of slides required for the application.
6. Slide is non-disconnectable.
 7. Slide is designed for compression loading only.
 8. To prevent internal damage to the slide, maximum mounting screw penetration cannot exceed .42 into the stationary section or .31 into the chassis section.
 10. Slide members are coated with Poxylube® - a gray-colored dry film lubricant.
 11. Slide members are made from 10 gage (.135) cold rolled steel, and 3/16 C.D. Flat Bar.
 12. Non-standard stainless steel slide, coated with Poxylube®, is available. This option will require a special reference number.
