

## **ESDARF02-1BU2CK**

# Single-line bidirectional ESD protection for high speed interface

Datasheet - production data

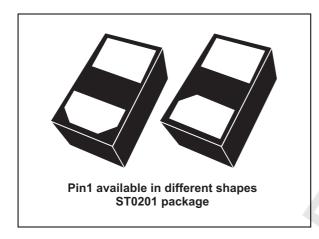

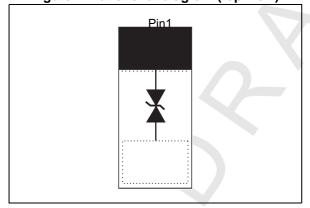

Figure 1. Functional diagram (top view)

### **Features**

· Bidirectional device

Extra low diode capacitance: 0.2 pF

Very high bandwidth: 30 GHz

· Low leakage current

0201 SMD package size compatible

Ultra small PCB area: 0.18 mm<sup>2</sup>

ECOPACK<sup>®</sup>2 and RoHS compliant component

### Complies with the following standards:

• IEC 61000-4-2 level 4

15 kV (air discharge)

8 kV (contact discharge)

## **Applications**

Where transient overvoltage protection in ESD sensitive equipment is required, such as:

- Smartphones, mobile phone and accessories
- Tablet PCs, netbooks and notebooks
- Portable multimedia devices and accessories
- · Digital cameras and camcorders
- Communication and highly integrated systems

## Description

The ESDARF02-1BU2CK is a bidirectional single line TVS diode designed to protect the data lines or other I/O ports against ESD transients.

The device is ideal for applications where both reduced line capacitance and board space saving are required.

Characteristics ESDARF02-1BU2CK

## 1 Characteristics

Table 1. Absolute maximum ratings ( $T_{amb} = 25$  °C)

| Symbol           | Parameter   | Value       | Unit |
|------------------|---|-------------|------|
| V <sub>PP</sub>  | Peak pulse voltage: IEC 61000-4-2 contact discharge IEC 61000-4-2 air discharge | 8<br>20     | kV   |
| P <sub>PP</sub>  | Peak pulse power (8/20 μs)  | 20          | W    |
| I <sub>PP</sub>  | Peak pulse current (8/20 μs)  | 1.5         | Α    |
| T <sub>j</sub>   | Operating junction temperature range  | -40 to +150 | °C   |
| T <sub>stg</sub> | Storage temperature range   | -65 to +150 | °C   |
| T <sub>L</sub>   | Maximum lead temperature for soldering during 10 s                              | 260         | °C   |

Note: For a surge greater than the maximum values, the diode will fail in short-circuit

Figure 2. Electrical characteristics (definitions)

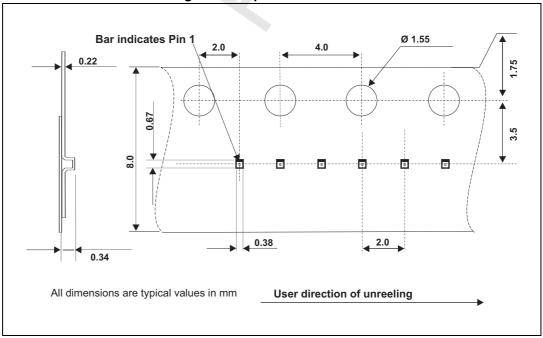

Figure 10. Footprint, dimensions in mm (inches)

Figure 11. Marking

Note: Product marking may be rotated by 180° for assembly plant differentiation. In no case should this product marking be used to orient the component for its placement on a PCB. Only pin 1 mark is to be used for this purpose.

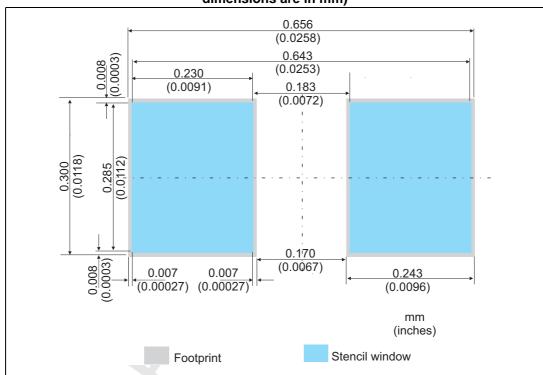

Figure 12. Tape and reel outline

# 3 Recommendation on PCB assembly

## 3.1 Stencil opening design

Figure 13. Recommended stencil windows-opening 90%/Thickness 80µm (all dimensions are in mm)

## 3.2 Solder paste

6/9

- 1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
- 2. "No clean" solder paste is recommended.
- 3. Offers a high tack force to resist component displacement during PCB movement.
- 4. Use solder paste with fine particles: Type4 (powder particle size is 20-45 μm).

DocID025014 Rev 3

#### 3.3 **Placement**

- Manual positioning is not recommended.
- 2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
- Standard tolerance of ±0.05 mm is recommended. 3.
- 1.0 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
- To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
- For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

#### 3.4 PCB design preference

- To control the solder paste amount, the closed via is recommended instead of open
- 2. The position of tracks and open vias in the solder area should be well balanced. The symmetrical layout is recommended, in case any tilt phenomena caused by asymmetrical solder paste amount due to the solder flow away.

#### 3.5 Reflow profile

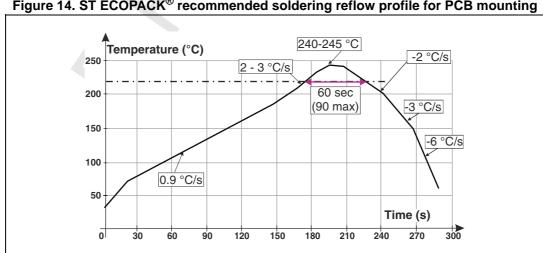

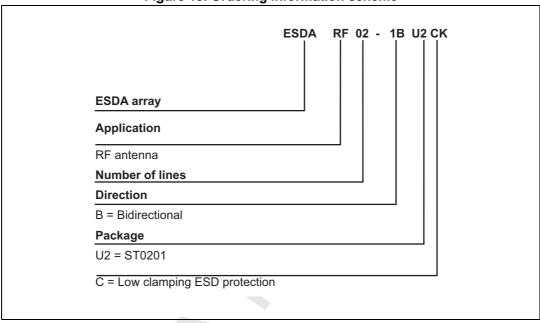

Figure 14. ST ECOPACK® recommended soldering reflow profile for PCB mounting

Note:

Minimize air convection currents in the reflow oven to avoid component movement. Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.

# 4 Ordering information

Figure 15. Ordering information scheme

**Table 4. Ordering information** 

| Order code      | Marking           | Weight   | Base qty. | Delivery mode |
|-----------------|-------------------|----------|-----------|---------------|
| ESDARF02-1BU2CK | Z3 <sup>(1)</sup> | 0.124 mg | 15000     | Tape and reel |

<sup>1.</sup> The marking can be rotated by 180° to differentiate assembly location

# 5 Revision history

Table 5. Document revision history

| Date        | Revision | Changes   |
|-------------|----------|---|
| 25-Feb-2015 | 1        | Initial release.  |
| 02-Jun-2016 | 2        | Updated <i>Features</i> . Updated <i>Table 2</i> and reformatted to current standard. |
| 16-Dec-2016 | 3        | Updated Table 3.  |
