**EGel3000**  
**Low viscosity silicone gel**

### Introduction

EGel3000 is one of a family of soft, adherent, clear silicone elastomeric gels designed for the encapsulation and protection of electronics components. It is a low viscosity, 2-component system that is readily mixed in a 1:1 ratio. It is used to provide protection from vibration, thermal or mechanical shock. It has excellent dielectric properties and also gives excellent protection from water and many environmental contaminants.

### Key Features
- Simple 1 to 1 mix ratio
- Very low viscosity
- Soft but resilient gel
- Flexible down to -55°C
- Surface tension of 21.1 dynes/cm
- 0.35 water absorption at 23°C over 30 days

### Use and Cure Information

**How to Use**

EGel3000 is supplied in several pack sizes and consists of kits containing equal quantities of Parts 'A' and 'B'. Containers should always be kept sealed when not in use, and all mixing equipment must be clean and free from contaminants such as organo-tin, sulphur, nitrogen compounds which can poison the catalyst and prevent proper cure.

**Application and Cure**

Each of the EGel3000 component parts should be mixed in the recommended one-to-one ratio (by volume or weight). This can be done readily either by hand or using a powered mixer, avoiding excessive aeration. The curing process begins as soon as the components are mixed and the working or pot life of the mixed system is dependent on the ambient temperature conditions. Note: Chilling the separate component parts, before and after mixing, will extend the pot life, but not indefinitely.

**Adhesion**

Fully cured EGel3000 exhibits good adhesion to most substrates such as:
- Aluminium
- Stainless steel
- ABS
- Polycarbonate
- PCB boards
- Nylon 6,6

**Inhibition of Cure**

Great care must be taken when handling and mixing all addition cured silicone elastomer systems, that all the mixing tools (vessels and spatulas) are clean and constructed in materials which do not interfere with the curing mechanism. The cure of the rubber can be inhibited by the presence of compounds of nitrogen, sulphur, phosphorus and arsenic; organotin catalysts and PVC stabilizers; epoxy resin catalysts and even contact with materials containing certain of these substances e.g. moulding clays, sulphur vulcanised rubbers, condensation cure silicone rubbers, onion and garlic.

**Health and Safety** - Material Safety Data Sheets available on request.

**Packages**

Gels are normally packed in 2kg, 10kg and 40kg kits

**Storage and Shelf Life** – Expected to be 18 months in original, unopened containers below 40°C.

**Technical Data Sheet**
