

-  **Combines (sums) two stereo CD or tape players into one mono (XLR or ¼ inch) output**
-  **Frees mixer channels**
-  **Phantom block on the XLR prevents phantom power from reaching CD/tape players connected to the RCA jacks**

JIB/R - need more inputs?

Ever wanted to plug a tape player & a cd player into a mixing console, but didn't have enough channels? The JIB/R will allow you to sum two stereo sources such as a tape, cd, mini disc, or mp3 player, and combine them into one mono XLR or ¼" output. This allows one channel to be freed up for other important inputs. The JIB/R, also has a phantom block circuit which prevents phantom power going to the input sources.
