Polymer Electrolytic (KO-CAP®), 6.3 – 35 VDC

Overview

KEMET's Organic Capacitors (KO-CAP) are preferred solutions for applications requiring power loss protection (hold-up) or maximum power efficiency of a circuit when board space is limited. Desired benefits include high energy density, stable capacitance with applied voltage and temperature, and no aging effects. The conductive polymer cathode of these solid electrolytic capacitors provide very low ESR and higher capacitance retention at high frequencies. Unlike liquid electrolyte-based capacitors, KEMET's polymer capacitors have a very long operational life and high ripple current capabilities. Capacitors from T520, T521 and T523 series are commonly used in these applications. The T545 and T548 series were introduced to meet specific needs for a subsegment of solid state drives.

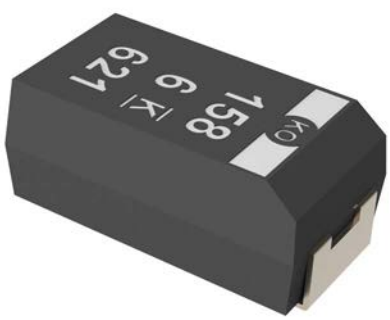
Benefits

- Highest energy per unit volume
- Stable capacitance across temperature and voltage
- No aging effects
- Low ESR values
- High frequency capacitance retention
- High ripple handling
- 100% accelerated steady state aging
- 100% surge current tested
- 100% thermal shock tested (T545 series only)
- Halogen-free epoxy/RoHS compliant

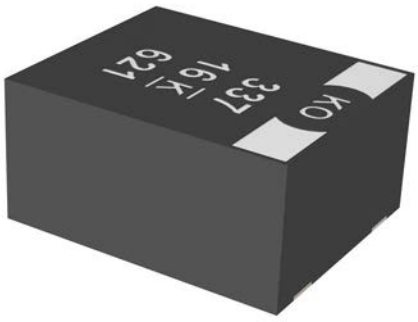
Applications

Typical applications include enterprise storage, networking, server, mobile, client storage, and client computing.

T520/T521/T545



T523/T548



Environmental Compliance

- RoHS compliant (6/6) according to Directive 2002/95/EC when ordered with 100% Sn solder or Ni-Pd-Au
- Halogen-free
- Epoxy compliant with UL94 V–0

K-SIM

For a detailed analysis of specific part numbers, please visit ksim.kemet.com to access KEMET's K-SIM software. KEMET K-SIM is designed to simulate behavior of components with respect to frequency, ambient temperature, and DC bias levels.

Ordering Information

T	548	V	157	M	016	A	T	E050	
Capacitor Class	Series	Case Size	Capacitance Code (pF)	Capacitance Tolerance	Rated Voltage (VDC)	Failure Rate/ Design	Termination Finish	ESR	Packaging (C-Spec)
T = Tantalum	520 = Low Voltage 521 = High Voltage 523 = Facedown Terminal 545 = High Energy 548 = High Energy, Facedown Terminal	B H J M O T V W X Y	First two digits represent significant figures. Third digit specifies number of zeros.	M = ±20%	006 = 6.3 010 = 10 016 = 16 020 = 20 035 = 35	A = N/A	T = 100% Matte Tin (Sn) plated P* = Ni-Pd-Au plated	ESR in mΩ	Blank = 7" Reel 7280 = 13"Reel

** P termination only available on T523/T548 part numbers*

Performance Characteristics

Item	Performance Characteristics
Operating Temperature	–55°C to 85°C/105°C (Refer to part number in Table 1 for maximum temperature rating)
Rated Capacitance Range	22 µF – 1,500 µF at 120 Hz/25°C
Capacitance Tolerance	M Tolerance (20%)
Rated Voltage Range	6.3 – 35 VDC
DF (120 Hz)	Refer to part number in Table 1 for electrical specification
ESR (100 kHz)	Refer to part number in Table 1 for electrical specification
Leakage Current	≤ 0.1 CV (µA) at rated voltage after 5 minutes (Refer to part number in Table 1 for electrical specification)

Qualification

Test	Condition	Characteristics					
Endurance	85°C or 105°C at rated voltage, 2,000 hours**	Δ C/C	Within −20/+10% of initial value				
		DF	Within initial limit				
		DCL	Within 1.25 x initial limit				
		ESR	Within 2.0 x initial limit				
Storage Life	85°C or 105°C at 0 volts, 2,000 hours**	Δ C/C	Within −20%/+10% of initial value				
		DF	Within initial limits				
		DCL	Within 1.25 x initial limit				
		ESR	Within 2.0 x initial limit				
Humidity	60°C, 90% RH, No Load, 500 hours	Δ C/C	Within −5% /+35% of initial value				
		DF	Within initial limit				
		DCL	Within 5.0 x initial limit				
		ESR	Within 2.0 x initial limit				
Temperature Stability	Extreme temperature exposure at a succession of continuous steps at +25°C, -55°C, +25°C, +85°C, +105°C**, +25°C		+25°C	−55°C	+25°C	+85°C	+105°C**	+25°C
		Δ C/C	IL*	+/−20%	+/−10%	+/−20%	+/-30%	+/−10%
		DF	IL	IL	IL	1.2 x IL	1.5 x IL	IL
		DCL	IL	N/A	IL	10 x IL	10 x IL	IL
Surge Voltage	85°C or 105°C, 1.32 x rated voltage, 1,000 cycles**	Δ C/C	Within −20/+10% of initial value					
		DF	Within initial limits					
		DCL	Within initial limits					
		ESR	Within initial limits					
Mechanical Shock/ Vibration	MIL-STD-202, Method 213, Condition I, 100G peak	Δ C/C	Within ±10% of initial value (Within initial limits for T527 Series)					
		DF	Within initial limits					
		DCL	Within initial limits					

** IL = initial limit*
*** Refer to Table 1 - Ratings & Part Number Reference for temperature classification. If temperature classification is 85°C, the 105°C step is not performed for the temperature stability test.*

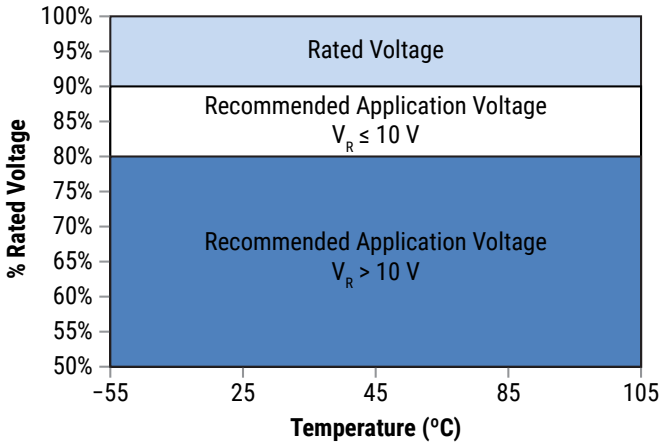
• Bold text denotes "Under Development." Engineering samples available upon request.
• Part numbers with an asterisk are not recommended for new designs. Please use the T520 series instead.
• Refer to Ordering Information for additional detail.
*• Energy = ½ * Nominal Cap * (Application Voltage^2 * Dropout Voltage^2)/1000; a 3 V dropout voltage was used for the calculation.*

Derating Guidelines



Voltage Rating	Maximum Recommended Steady State Voltage
	−55°C to 105°C
6.3 V ≤ Vr ≤ 10 V	90% of Vr
10 V < Vr	80% of Vr

V_R = Rated Voltage

Recommended Application Voltage

KOCAP's are solid state capacitors that demonstrate no wearout mechanism when operated within their recommended guidelines. While the KOCAP can be operated at full rated voltage, most circuit designers seek a minimum level of assurance in long term reliability which should be demonstrated with data. A voltage derating can provide the desired level of demonstrated reliability based on industry accepted acceleration models. Since most applications do require long term reliability, KEMET recommends that designers consider a voltage derating, according the graphic above, for the maximum steady state voltage.

Ripple Current/Ripple Voltage

Permissible AC ripple voltage and current are related to equivalent series resistance (ESR) and the power dissipation capabilities of the device.

Permissible AC ripple voltage which may be applied is limited by two criteria:
a. The positive peak AC voltage plus the DC bias voltage, if any, must not exceed the DC voltage rating of the capacitor.
b. The negative peak AC voltage, in combination with bias voltage, if any, must not exceed the allowable limits specified for reverse voltage.

The maximum power dissipation by case size can be determined using the below table.

Temperature Compensation Multipliers for Maximum Ripple Current		
T ≤ 45°C	45° C < T ≤ 85°C	85°C < T ≤ 105°C
1.00	0.70	0.25

T= Environmental Temperature

Using the P max of the device, the maximum allowable rms ripple current or voltage may be determined.

$I(max) = \sqrt{P\ max/R}$
$E(max) = Z\sqrt{P\ max/R}$

I = rms ripple current (amperes)
E = rms ripple voltage (volts)
P max = maximum power dissipation(watts)
R = ESR at specified frequency (ohms)
Z = Impedance at specified frequency (Ohms)

Refer to part number listings for permittable Arms limits.

Case Code	EIA Case Code	Maximum Power Dissipation (P max) mWatts at 45°C with +30°C Rise	
		For T520/T521/T545	For T523/T548
T	3528-12	105	N/A
M	3528-15	120	N/A
B	3528-21	127	N/A
W	7343-15	180	395
V	7343-20	187	410
Y	7343-40	241	N/A
X	7343-43	247	N/A
J	7360-15	200	440
H	7360-20	200	440
O	7360-43	300	N/A

The maximum power dissipation rating must be reduced with increasing environmental operating temperatures. Refer to the Temperature Compensation Multiplier table for details.

Surge Voltage

Surge voltage is the maximum voltage (peak value) which may be applied to the capacitor. The surge voltage must not be applied for periodic charging and discharging in the course of normal operation and cannot be part of the application voltage. Surge voltage capability is demonstrated by application of 1,000 cycles at operating temperature. The parts are charged through a 33 Ohm resistor for 30 seconds and then discharged though a 33 Ohm resistor for each cycle.

Rated Voltage (V)	Surge Voltage (V)
−55°C to 105°C	
2.5	3.3
6.3	8.3
10	13.2
16	21.1
20	26.4
25	33.0
35	46.2

Reverse Voltage

Polymer electrolytic capacitors are polar devices and may be permanently damaged or destroyed if connected in the wrong polarity. These devices will withstand a small degree of transient voltage reversal for short periods as shown in the below table.

Temperature	Permissible Transient Reverse Voltage
25°C	15% of Rated Voltage
55°C	10% of Rated Voltage
85°C	5% of Rated Voltage
105°C	3% of Rated Voltage
125°C*	1% of Rated Voltage

**For series rated to 125°C*

Soldering Process

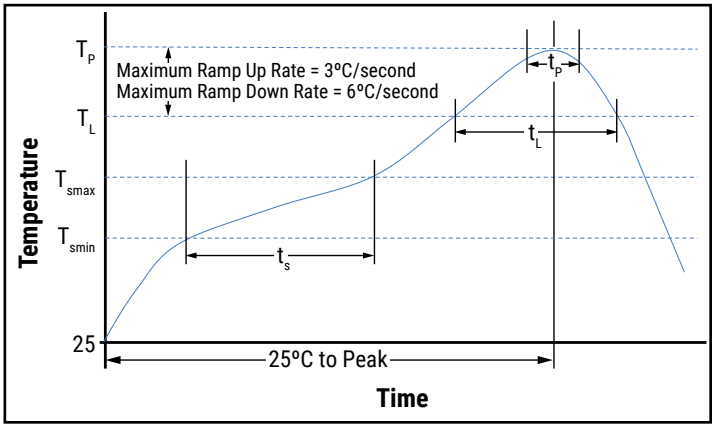
KEMET's families of surface mount capacitors are compatible with wave (single or dual), convection, IR, or vapor phase reflow techniques. Preheating of these components is recommended to avoid extreme thermal stress. KEMET's recommended profile conditions for convection and IR reflow reflect the profile conditions of the IPC/J–STD–020D standard for moisture sensitivity testing. The devices can safely withstand a maximum of three reflow passes at these conditions.

Please note that although the X/7343–43 and O/7360-43 case size can withstand wave soldering, the tall profile (4.3 mm maximum) dictates care in wave process development.

Hand soldering should be performed with care due to the difficulty in process control. If performed, care should be taken to avoid contact of the soldering iron to the molded case. The iron should be used to heat the solder pad, applying solder between the pad and the termination, until reflow occurs. Once reflow occurs, the iron should be removed immediately. "Wiping" the edges of a chip and heating the top surface is not recommended.

Profile Feature	Pb-Free Assembly
Preheat/Soak	
Temperature Minimum (T_{Smin})	150°C
Temperature Maximum (T_{Smax})	200°C
Time (t_s) from T_{smin} to T_{smax})	60 – 120 seconds
Ramp-up Rate (T_L to T_P)	3°C/seconds maximum
Liquidous Temperature (T_L)	217°C
Time Above Liquidous (t_L)	60 – 150 seconds
Peak Temperature (T_P)	250°C* 260°C**
Time within 5°C of Maximum Peak Temperature (t_P)	30 seconds maximum
Ramp-down Rate (T_P to T_L)	6°C/seconds maximum
Time 25°C to Peak Temperature	8 minutes maximum

Note: All temperatures refer to the center of the package, measured on the package body surface that is facing up during assembly reflow.
**Case Size O, Y, and X*
***Case Size B, H, J, M, T, V, and W*



Storage

All KO-Cap Series are shipped in moisture barrier bags (MBBs) with desiccant and humidity indicator card (HIC). These parts are classified as MSL3 (Moisture Sensitivity Level 3) or MSL4 (Moisture Sensitivity Level 4) per IPC/JEDEC J-STD-020 and packaged per IPC/JEDEC J–STD–033. Refer to Table 1 for part type specification. MSL3 specifies a floor time of 168H at 30°C maximum temperature and 60% relative humidity. MSL4 specifies a floor time of 72H at 30°C maximum temperature and 60% relative humidity. Unused capacitors should be sealed in a MBB with fresh desiccant.

Calculated shelf life in sealed bag:
– 12 months from bag seal date in a storage environment of < 40°C and humidity < 90% RH
– 24 months from bag seal date in a storage environment of < 30°C and humidity < 70% RH

If baking is required, refer to IPC/JEDEC J–STD–033 for bake procedure

Date Code *	
1st digit = Last number of Year	2 = 2012 3 = 2013 4 = 2014 5 = 2015 6 = 2016 7 = 2017
2nd and 3rd digit = Week of the Year	01 = 1st week of the Year to 52 = 52nd week of the Year

Tape & Reel Packaging Information

KEMET's molded chip capacitor families are packaged in 8 and 12 mm plastic tape on 7" and 13" reels in accordance with *EIA Standard 481:* Embossed Carrier Taping of Surface Mount Components for Automatic Handling. This packaging system is compatible with all tape-fed automatic pick-and-place systems.

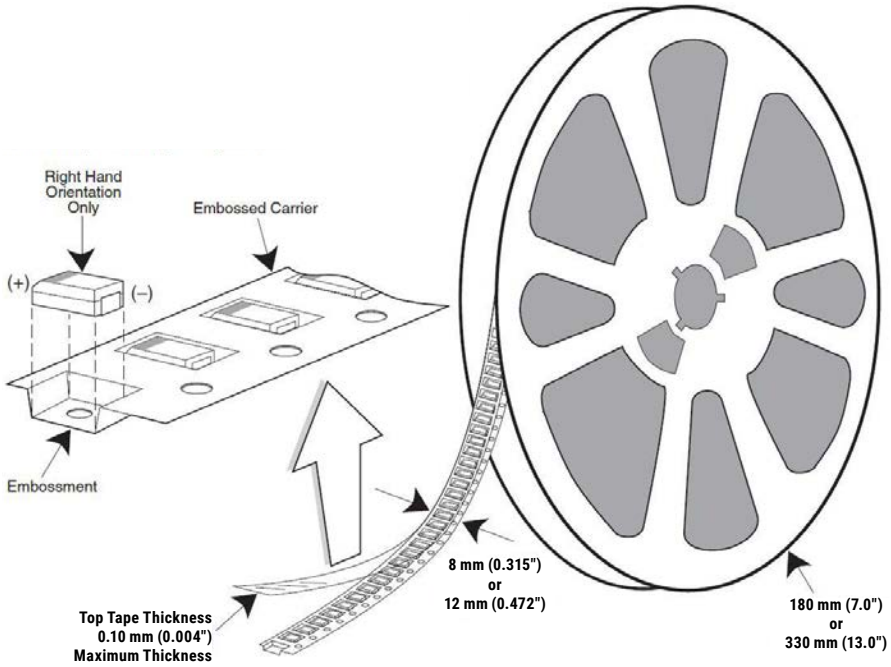

Table 3 – Packaging Quantity

Case Code		Tape Width (mm)	7" Reel*	13" Reel*
KEMET	EIA			
T	3528-12	8	2,500	10,000
M	3528-15	8	2,000	8,000
B	3528-21	8	2,000	8,000
W	7343-15	12	1,000	3,000
V	7343-20	12	1,000	3,000
Y	7343-40	12	500	2,000
X	7343-43	12	500	2,000
J	7360-15	12	1,000	3,000
H	7360-20	12	1,000	3,000
O	7360-43	12	500	2,000

** No C-Spec required for 7" reel packaging. C-7280 required for 13" reel packaging.*

1. The embossment hole location shall be measured from the sprocket hole controlling the location of the embossment. Dimensions of embossment location and hole location shall be applied independent of each other.

2. The tape, with or without components, shall pass around R without damage (see Figure 4).

3. If S_1 < 1.0 mm, there may not be enough area for cover tape to be properly applied (see EIA Standard 481–D, paragraph 4.3, section b).

4. B_1 dimension is a reference dimension for tape feeder clearance only.

5. The cavity defined by A_0, B_0 and K_0 shall surround the component with sufficient clearance that:

(a) the component does not protrude above the top surface of the carrier tape.

(b) the component can be removed from the cavity in a vertical direction without mechanical restriction, after the top cover tape has been removed.

(c) rotation of the component is limited to 20° maximum for 8 and 12 mm tapes and 10° maximum for 16 mm tapes (see Figure 2).

(d) lateral movement of the component is restricted to 0.5 mm maximum for 8 mm and 12 mm wide tape and to 1.0 mm maximum for 16 mm tape (see Figure 3).

(e) see Addendum in EIA Standard 481–D for standards relating to more precise taping requirements.

Packaging Information Performance Notes

1. Cover Tape Break Force: 1.0 Kg minimum.
2. Cover Tape Peel Strength: The total peel strength of the cover tape from the carrier tape shall be:

Tape Width	Peel Strength
8 mm	0.1 to 1.0 Newton (10 to 100 gf)
12 and 16 mm	0.1 to 1.3 Newton (10 to 130 gf)

The direction of the pull shall be opposite the direction of the carrier tape travel. The pull angle of the carrier tape shall be 165° to 180° from the plane of the carrier tape. During peeling, the carrier and/or cover tape shall be pulled at a velocity of 300 ±10 mm/minute.
3. Labeling: Bar code labeling (standard or custom) shall be on the side of the reel opposite the sprocket holes. *Refer to EIA Standards 556 and 624.*

Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed.

All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product–related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicted or that other measures may not be required.
