### Construction

A high quality ceramic substrate is assembled with interference fit end caps to which are welded the element

to the body, providing an effective seal which is impervious to moisture, shock, vibration, fungus and salt spray.

### Terminations

- Material** Solder coated copper.
- Strength** The terminations meet the requirements of IEC 68.2.21.
- Solderability** The terminations meet the requirements of IEC 115-1, Clause 4.17.3.2.

### Marking

W31 resistors are legend marked with type reference, resistance value and tolerance. Values are marked in accordance with IEC 62.

### Solvent Resistance

The body and marking are resistant to all normal industrial cleaning solvents suitable for printed circuits.

### Flammability

The resistor coating will not burn under any condition of applied temperature or component overload.

## Application Notes

The terminations should not be bent closer than 1.6mm from the body, and the recommended minimum bend radius is 1.2mm.

Care must be taken when determining clearance between the resistor body and the P.C.B. or other components. Resistance is measured 6mm from body.

### Packaging

The standard method of packaging is taped in ammo packs. Can be provided on reels by request.

These products are also available in a range of lead forming options. In particular, it is available in ZI-form SMD format packed in blister tape see <http://www.ttelectronics.com/themes/ttelectronics/datasheets/resistors/ZI-form.pdf>
