

## NE8MC\* – Facelift

In order to provide a perfect fit for the vast amount of different RJ45s available on the market we have redesigned the alignment parts and simultaneously improved the positioning of the RJ45 connectors inside the etherCON cable carrier.

By help of the new alignment system we now support a greater range of RJ45 plugs while in parallel the improved positioning grants a smooth mating with the corresponding etherCON receptacle. Additionally we significantly eased the assembly of the connector since the chuck now clasps around both alignment parts and so it is very convenient to insert the assembly group into the housing.
