

NHS3152THADADK: Therapy Adherence NHS3152 Starter Kit

Overview

This kit permits evaluation of the NHS3152 chip for therapy adherence and a quick start for development of a specific use case. The NHS3152 is part of the NTAG SmartSensor family and contains a temperature sensor, ADC, DAC and a current-to-digital unit. Firmware developed on this starter kit can be fully reused in the final product form factor to speed the time-to-market of your therapy adherence product.

Features

- Based on the LPCXpresso IDE
 - Eclipse based
 - GNU C compiler, linker and libraries
 - GDB
-

Kit Contains

- NHS3152 demo PCB connected with switches to emulate pill intakes
- LPC-Link2 board
- Mini USB cable

Software SDK, full HW and SW documentation and demo applications can be downloaded after registration.
