

## AVD50B-48S05

### 50 Watts Sixteenth-brick Converter

**Total Power:** 50 Watts  
**Input Voltage:** 36 to 75 Vdc  
**# of Outputs:** Single

### Special Features

- Delivers up to 10A output current
- Ultra-high efficiency 91.5% typical at 10A load
- Wide input range: 36V ~ 75V
- Excellent thermal performance
- No minimum load requirement
- RoHS 6 compliant
- Basic isolation
- High power density
- Low output noise
- Startup Pre-bias
- Remote control function
- Remote output sense
- Input under voltage lockout
- Output over current protection
- Output short circuit protection
- Output over voltage protection
- Over temperature protection
- Industry standard sixteenth-brick pin-out outline

### Safety

IEC/EN/UL/CSA 60950  
CE Mark  
UL/TUV  
Materials meet UL94, V-0  
flammability rating  
EN55032 Class A with external  
filter

### Product Descriptions

The AVD50B-48S05 is a single output DC/DC converter with standard sixteenth-brick outline and pin configuration. It delivers up to 10A output current with 5V output. Above 91.5% ultra-high efficiency and excellent thermal performance makes it an ideal choice to supply power in telecom and datacom.

### Absolute Maximum Ratings

Stress in excess of those listed in the "Absolute Maximum Ratings" may cause permanent damage to the power supply. These are stress ratings only and functional operation of the unit is not implied at these or any other conditions above those given in the operational sections of this TRN. Exposure to any absolute maximum rated condition for extended periods may adversely affect the power supply's reliability.

## Environmental Specifications

### EMC Immunity

AVD50B-48S05 power supply is designed to meet the following EMC immunity specifications:

Table 4. Environmental Specifications:

Document	Description	Criteria
EN55032, DC input port, Class A	Conducted and Radiated EMI Limits	/
IEC/EN 61000-4-2, Enclosure port, Level 3	Electromagnetic Compatibility (EMC) - Testing and measurement techniques: Electrostatic discharge immunity test	B
IEC/EN 61000-4-4, Level 3	Electromagnetic Compatibility (EMC) - Testing and measurement techniques: Electrical Fast Transient. DC input port	B
IEC/EN 61000-4-5	Electromagnetic Compatibility (EMC) - Testing and measurement techniques: Immunity to surges - 600V common mode and 600V differential mode for DC input port	B
IEC/EN 61000-4-6, Level 2	Electromagnetic Compatibility (EMC) - Testing and measurement techniques: Continuous Conducted Interference. DC input port	A
EN61000-4-29	Electromagnetic Compatibility (EMC) - Testing and measurement techniques: Voltage Dips and short interruptions and voltage variations. DC input port	B

Criterion A: Normal performance during and after test.

Criterion B: For EFT and surges, low-voltage protection or reset is not allowed. Temporary output voltage fluctuation ceases after disturbance ceases, and from which the EUT recovers its normal performance automatically. For Dips and ESD, output voltage fluctuation or reset is allowed during the test, but recovers to its normal performance automatically after the disturbance ceases.

Criterion C: Temporary loss of output, the correction of which requires operator intervention.

Criterion D: Loss of output which is not recoverable, owing to damage to hardware.

**Safety Certifications**

The AVD50B-48S05 power supply is intended for inclusion in other equipment and the installer must ensure that it is in compliance with all the requirements of the end application. This product is only for inclusion by professional installers within other equipment and must not be operated as a stand alone product.

## Operating Temperature

The AVD50B-48S05 series power supplies will start and operate within stated specifications at an ambient temperature from -40 °C to 85 °C under all load conditions. The storage temperature is -55 °C to 125 °C.

## Thermal Considerations

The converter is designed to operate in different thermal environments and sufficient cooling must be provided. Proper cooling can be verified by measuring the temperature at the test points as shown in the Figure 11. The temperature at these points should not exceed the max values in Table 6.

Table 6. Temperature limit of the test points

Test Point	Temperature Limit
Test point 1	115 °C
Test point 2	120 °C

C2,C3: 1 $\mu$ F/100V X7R ceramic capacitor, P/N: C3216X7R2A105KT0L0S (TDK) or equivalent caps.

C4:220 $\mu$ F oscon capacitor, P/N: CUXAE1C221M2BA(Sanyo).

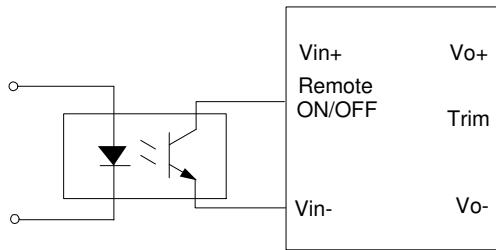

Fuse: External fast blow fuse with a rating of 5A. The recommended fuse model is 0453005.MR from LITTLEFUSE.

Note: EMI filter: see Figure 18.

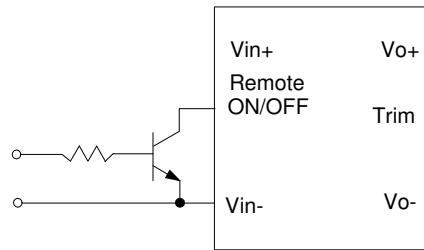

## Remote ON/OFF

Negative remote ON/OFF logic is available in AVD50B-48S05. The logic is CMOS and TTL compatible.

The voltage between pin Remote ON/OFF and pin Vin- must not exceed the range listed in Table 3 to ensure proper operation. The external Remote ON/OFF circuit is highly recommended as shown in Figure 14.

Isolated remote ON/OFF circuit

non-isolated remote ON/OFF circuit

Figure 14 External Remote ON/OFF circuit

**Trim Characteristics**

Connecting an external resistor between Trim pin and Vo- pin will decrease the output voltage, while connecting it between Trim and Vo+ will increase the output voltage. The following equations determine the external resistance to obtain the trimmed output voltage.

$$R_{adj-down} = \frac{510}{\Delta} - 10.2(K\Omega)$$

$$R_{adj-up} = \frac{5.1 \times V_{o,nom} \times (100 + \Delta)}{1.225 \times \Delta} - \frac{510}{\Delta} - 10.2(K\Omega)$$

$\Delta$  : Output rate against nominal output voltage.

$$\Delta = \frac{100 \times (V_{o,nom} - V_o)}{V_{o,nom}}$$

$V_{norm}$  : Nominal output voltage.

For example, to get 5.5V output, the trimming resistor is

$$\Delta = \frac{100 \times (V_o - V_{o,nom})}{V_{o,nom}} = \frac{100 \times (5.5 - 5)}{5} = 10$$

$$R_{adj-up} = \frac{5.1 \times 5 \times (100 + 10)}{1.225 \times 10} - \frac{510}{10} - 10.2 = 167.78(K\Omega)$$

When trimming up, the output current should be decreased accordingly so as not to exceed the maximum output power.

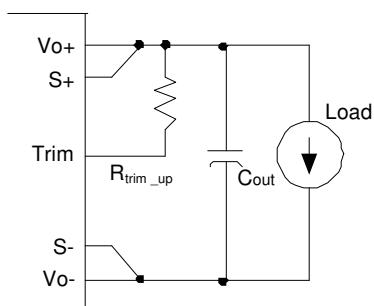

Figure 15 Trim up

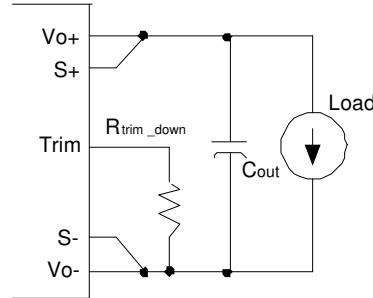

Figure 16 Trim down

If the sense compensate function is not necessary, connect S+ to Vo+ and S- to Vo- directly.

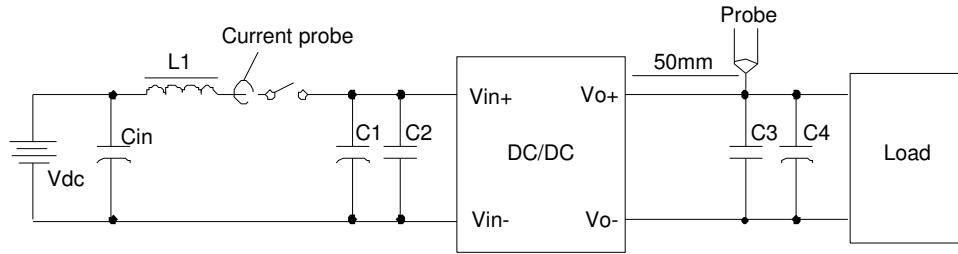

**Input Ripple & Inrush Current And Output Ripple & Noise Test Configuration**

$V_{dc}$ : DC power supply

$L_1$ : 12 $\mu$ H

$C_{in}$ : 220 $\mu$ F/100V typical

$C_1 \sim C_4$ : See Figure 13

Note: Using a coaxial cable with series 50 $\Omega$ resistor and 0.68 $\mu$ F ceramic capacitor or a ground ring of probe to test output ripple & noise is recommended.

## Soldering

The product is intended for standard manual or wave soldering.

	<b>Product Requirement</b>	<b>Product Name</b>
R6	Wave soldering	AVD50B-48S05B-6L AVD50B-48S05-6L

When wave soldering is used, the temperature on pins is specified to maximum 260 °C for maximum 7s.

When soldering by hand, the iron temperature should be maintained at 300 °C ~ 380 °C and applied to the converter pins for less than 10s. Longer exposure can cause internal damage to the converter. Cleaning of solder joint can be performed with cleaning solvent IPA or simulative.

The below products are intended for standard reflow soldering.

	<b>Product Requirement</b>	<b>Product Name</b>
R6	Reflow soldering	AVD50B-48S05-6L AVD50B-48S05TL

When reflow soldering is used, the temperature on pins is specified to maximum 260 °C for maximum 10s.

√: Means the content of the hazardous substances in at least one of the average quality materials of the part is outside the limits specified in SJ/T11363-2006

Artesyn Embedded Technologies has been committed to the design and manufacturing of environment-friendly products. It will reduce and eventually eliminate the hazardous substances in the products through unremitting efforts in research. However, limited by the current technical level, the following parts still contain hazardous substances due to the lack of reliable substitute or mature solution:

1. Solders (including high-temperature solder in parts) contain plumbum.
2. Glass of electric parts contains plumbum.
3. Copper alloy of pins contains plumbum
