

# AUDIO 'BUDDY'

## BLUETOOTH RECEIVER

**Convert your wired headphones, car stereo or Hi-Fi speakers to Wireless Bluetooth!**

The Bitmore Audio Buddy is a Bluetooth receiver that allows you to connect your wired headphones via the 3.5mm Aux port found on the Audio 'buddy', and listen to your music and take calls wirelessly. There's no need to remove the phone from your pocket or bag. Skipping tracks, or stopping or pausing your music and making calls has never been easier.

The Audio Buddy can also be used with Hi-Fi speakers (as long as they have a 3.5mm Aux port), as well as in the car too via the 3.5mm Aux port allowing you to stream music wirelessly through your car stereo system.
