		AUTHORIZED BY C. Martinez	DATE 29 July 08
CLASSIFICATION UNRESTRICTED			

1.0 OBJECTIVE

This specification defines the performance, test, quality, and reliability requirements of the Conan™ Micro miniature Connector System as well as Lead Free product that meets the requirement of the European Union Directives of Restriction for Hazardous Substances (Directive 2002/95/EC).

2.0 SCOPE

This specification is applicable to the termination characteristics of the Conan™ connector system, which provides for parallel interconnection of printed wiring boards in low power applications.

3.0 GENERAL

5.0 REQUIREMENTS

5.1 QUALIFICATION

Connectors furnished under this specification shall be products that are capable of meeting the qualification test requirements specified herein.

5.2 MATERIAL

The material for each part shall be as specified herein, or equivalent. Substitute material shall meet the performance requirements of this specification.

- 5.2.1 Receptacle Terminal. The base material shall be beryllium copper strip C17200, SHM (TMO5).
- 5.2.2 Header Terminal. The base material shall be 3/4 hard phosphor bronze strip C51000.
- 5.2.3 Header and Receptacle Insulator Housing. The insulators shall be molded of 30% glass filled liquid crystal polymer that is rated 94V-0 or better in accordance with UL-94.
- 5.2.4 Hold-Down. The base material shall be full hard, brass strip C26000. See Section 5.3.2 for plating requirements.

5.3 FINISH

- 5.3.1 The header and receptacle terminals shall be plated in the contact area with 15 microinches min. GXT™, 30 microinches min. GXT™ or 50 microinches min. Gold (dependent on finish specified by part number) over 50 microinches Nickel or Copper. The terminal soldertail shall be plated with 200 microinches min. tin lead, 100 microinches min. tin lead or pure tin over 50 microinches min. Nickel or Copper. The terminal areas outside of the contact area and soldertail areas shall be plated with 50 microinches min. Nickel or Copper.
- 5.3.2 The hold-down shall be plated with 100 microinches min. tin lead or pure tin over 50 microinches min. Nickel or Copper.

5.4 DESIGN AND CONSTRUCTION

The connector shall be a multi-piece assembly having two rows of contacts with surface mount soldertail terminations and solderable surface mount retention devices for installation on surface mount printed wiring boards or flexible circuits.

- 5.4.1 Mating. The connector shall be capable of mating and unmating manually without the use of special tools.
- 5.4.2 Workmanship. Connectors shall be uniform in quality and shall be free from burrs, scratches, cracks, voids, chips, blisters, pin holes, sharp edges, and other defects that will adversely affect life or serviceability. Open knit lines, which may appear as a crack, may be present in the housing but do not adversely affect the performance of the connector as per the requirements outlined in this specification.

		CLASSIFICATION UNRESTRICTED	

6.0 ELECTRICAL CHARACTERISTICS

6.1 CURRENT RATING

The maximum current rating based upon a 30 degree C temperature rise over ambient is 1.0 amp DC per contact for a 69 position connector with all contacts carrying current. The maximum current carrying capacity for an individual contact is 2.0 amps D.C.

6.2 LOW LEVEL CONTACT RESISTANCE

The low level contact resistance of the 4.15mm, 4.5mm, 5mm and 5.5mm mated height connectors shall not exceed 20 milliohms initially and 30 milliohms after environmental exposure when measured in accordance with EIA-364 TP45. The low level contact resistance of the 6mm, 7mm and 7.5mm mated height connectors shall not exceed 25 milliohms initially and 35 milliohms after environmental exposure when measured in accordance with EIA-364 TP45. The following details shall apply:

- A. Method of connection: Attach current and voltage leads as shown in Figure 1.0. The resistance shall be measured from the solder tail of the header to the solder tail of the receptacle.
- B. Test Voltage: 20 millivolts DC max open circuit.
- C. Test Current: Not to exceed 100 milliamperes.

6.3 INSULATION RESISTANCE

The insulation resistance of the mated connectors shall not be less than 1 gigaohm after environmental exposure when measured in accordance with MIL-STD-202F, Method 302. The following details shall apply:

- A. Test voltage: 500 volts DC
- B. Preparation: The connectors shall be mated but not soldered to a P.C. board.
- C. Measurement points: The insulation resistance shall be measured between a minimum of 10 adjacent and 10 opposing contacts per connector.

6.4 DIELECTRIC WITHSTANDING VOLTAGE

There shall be no evidence of arc-over, insulation breakdown or leakage current in excess of 1 milliampere when the unmated connector is tested in accordance with MIL-STD-202F, Method 301. The following details shall apply:

- A. Test voltage: 500 volts rms at 60 hz.

NUMBER GS-12-006	TYPE PRODUCT SPECIFICATION		
TITLE Conan™ Micro miniature Connector System		PAGE 5 of 17	REVISION T
		AUTHORIZED BY C. Martinez	DATE 29 July 08
		CLASSIFICATION UNRESTRICTED	

- B. Test duration: 60 seconds
- C. Preparation: The connectors shall be mounted but not soldered to a P.C. board.
- D. Measurement points: The dielectric withstanding voltage shall be applied across a minimum of 10 adjacent and 10 opposing contacts.

6.5 CAPACITANCE

The capacitance between adjacent and opposing contacts in a mated connector shall not exceed 2.0 picofarads when tested in accordance with Du Pont specification BUS-03-114. The following details shall apply:

- A. Test frequency: 100 khz
- B. Preparation: The connectors shall be mated but not soldered to a P.C. board.
- C. Measurement points: The capacitance shall be measured across a minimum of 10 adjacent and 10 opposing contacts.

7.0 MECHANICAL CHARACTERISTICS

7.1 CONTACT RETENTION

Individual contacts in the unterminated header and receptacle portions of the connector shall withstand a load normal to the soldertail of 0.25 min. pounds. The force shall be measured on a minimum of 10 contacts per unmated header and receptacle connector. The crosshead speed shall be no greater than 0.2 inches per minute.

7.2 MATING FORCE

The force to mate header and receptacle connectors that are mounted on a P.C. board shall not exceed 125 grams per contact. The crosshead speed shall be no greater than 1.0 inches per minute.

7.3 UNMATING FORCE

The force to unmate header and receptacle connectors that are mounted on a P.C. board shall be no less than 45 grams per contact. The crosshead speed shall be no greater than 1.0 inch per minute.

7.4 NORMAL FORCE

NUMBER GS-12-006	TYPE PRODUCT SPECIFICATION		
TITLE Conan™ Micro miniature Connector System		PAGE 6 of 17	REVISION T
		AUTHORIZED BY C. Martinez	DATE 29 July 08
		CLASSIFICATION UNRESTRICTED	

The contact normal force shall not be less than 75 grams when tested in accordance with BUS-03-404 Section 3.2 (probe method). Refer to Figure 2.0. The following process shall be used:

- 7.4.1 Solder the receptacle and header connectors to a printed circuit board.
- 7.4.2 Select the receptacle terminal positions to be measured.
- 7.4.3 Measure the maximum terminal gap between the selected positions and the opposite row of terminals in the receptacle connector.
- 7.4.4 Measure the minimum width across the selected positions and the opposite row of terminals of the header connector.
- 7.4.5 Using an "L" shaped probe, Lab Fixture Number MF149, Figure 2, deflect the contact positions on the instron tester.
- 7.4.6 The minimum beam deflection occurs on the long row of terminals. Calculate the minimum beam deflection as follows:

V = Minimum width across the header terminals.
W = Maximum gap between receptacle terminals.
Z = Deflection of terminals in the long row.
A = Number of terminals in the short row.
B = Number of terminals in the long row.

$$\text{Minimum deflection (Z)} = \frac{A*(V-W)}{(A+B)}$$

- 7.4.7 Starting at the bottom of the force-deflection curve where the terminal begins to deflect, move up the curve a distance equal to the minimum deflection, Z, to find the minimum normal force. Measure a minimum of 5 contacts per connector.

7.5 BOARD RETENTION

The force to remove the header and receptacle connectors from a P.C. board shall be no less than 10 lbs. when both the hold-downs and the terminal leads are soldered in place. The crosshead speed shall be no greater than 0.2 inches per minute.

		CLASSIFICATION UNRESTRICTED	

8.0 ENVIRONMENTAL CONDITIONS

After exposure to the following environmental conditions in accordance with the specified test procedures and/or details, the product shall show no physical damage and shall meet the electrical and mechanical requirements per paragraphs 6.0 and 7.0 as specified in the Table 1.0 test sequences. Unless specified otherwise, the assemblies shall be mated during exposure.

8.1 HUMIDITY, STEADY STATE - MIL-STD-202F, METHOD 103B

- A. Relative humidity: 90% +/- 5%
- B. Temperature: 40 +/- 3 Deg. C
- C. Test Duration: 96 hours
- D. Samples: Groups 1 and 2 - unmated during exposure.

8.2 THERMAL SHOCK - MIL-STD-202F, METHOD 107G

- A. Test condition: A - (25, 1 hour cycles).
- B. Temperature range: -55 +/- 5 to +130 +/- 5 Deg. C.
- C. Time at each temperature: 30 minutes
- D. Transfer time: 5 minutes max.
- E. Samples: Groups 1 and 2 - unmated during exposure.

8.3 ENVIRONMENTAL SEQUENCE

Phase 1 - Thermal shock, MIL-STD-202F, Method 107G.

- A. Test duration - 36, 1-hour cycles
- B. Temperature range - between -20 and +80 deg. C.
- C. Time at temperature - 30 minutes
- D. Transfer time - 5 minutes, maximum

Phase 2 - Humidity, MIL-STD-202F, Method 103B.

- A. Test duration - 10 days
- B. Relative humidity - 95%
- C. Temperature - 40 +/- 3 deg. C.

8.3.1 - High Tem Life MIL-STD-202F, Method 108A

- A. Test Duration - 21 days
- B. Temperature - 105 deg. C.

NUMBER GS-12-006	TYPE PRODUCT SPECIFICATION

		AUTHORIZED BY C. Martinez	DATE 29 July 08
		CLASSIFICATION UNRESTRICTED	

8.4 SHOCK - MIL-STD-202F, METHOD 213B

- A. Condition - A, (50G, 11 ms half-sine) contacts shall show no evidence of discontinuity greater than one microsecond. The following details shall apply:
- B. Shocks: 3 shocks in both directions along each of 3 orthogonal axes (18 total).
- C. Mounting: See Figure 3.0.
- D. No discontinuities greater than 1.0 microseconds.

8.5 VIBRATION - MIL-STD-202F, METHOD 204D

- A. Condition: B
- B. Vibration Amplitude: +/-15G or .06" da.
- C. Frequency range: 10 to 2000 hz.
- D. Sweep time and duration: 20 minutes per sweep, 4 hours along each of 3 orthogonal axes (12 hours total).
- E. Mounting: See Figure 3.0.

8.6 INDUSTRIAL MIXED FLOWING GAS - BATTELLE PROCEDURE

- A. Class: IIa
- B. Duration: 20 days, mated

8.7 SOLDERABILITY - MIL-STD-202F METHOD 208F

- A. Contact tails shall be solderable over a minimum of .035 from the tip.
- B. Steam aging: Suspended 2 inches above boiling, distilled water for 4 hours.
- C. Acceptable coverage: 95% minimum.
- D. Solder: 60/40 tin-lead in accordance with QQ-S-571, Type S.
- E. Flux: Type RMA.
- F. Flux immersion time: 10 seconds.

NUMBER GS-12-006	TYPE PRODUCT SPECIFICATION		
TITLE Conan™ Micro miniature Connector System		PAGE 9 of 17	REVISION T
		AUTHORIZED BY C. Martinez	DATE 29 July 08
		CLASSIFICATION UNRESTRICTED	

G. Solder dwell time: Terminal held immediately above solder for 10 seconds and then immersed for 5 +/- 0.5 seconds. The solder tails shall be bent normal to the base of the connector to prevent the insulator from touching the solder bath.

H. Solder temperature: 245 +/- 5 deg. C.

I. Samples: Group 7 - unsoldered and unmated.

8.8 RESISTANCE TO IR SOLDERING HEAT

A. Temperature: 260°C ± 5° C (peak temperature)

B. Duration: 30 seconds.

8.9 DURABILITY - STANDARD LABORATORY PROCEDURES

A. Number of cycles: 30 cycles for 15u" GXT Contact Finish
 200 cycles for 30u" GXT Contact Finish

B. Crosshead speed: 1 inch/minute max.

9.0 QUALITY ASSURANCE PROVISIONS

9.1 EQUIPMENT CALIBRATION

All test equipment and inspection facilities used in the performance of any test shall be maintained in a calibration system in accordance with MIL-C-45662 and ISO 9000.

9.2 INSPECTION CONDITIONS

Unless otherwise specified herein, all inspections shall be performed under the following ambient conditions:

A. Temperature: 25 +/- 5 deg. C.

B. Relative humidity: 30 to 60%

C. Barometric pressure: Local ambient.

9.4 QUALIFICATION TESTING

Qualification testing shall be performed on sample units produced with equipment and procedures normally used in production. The test sequence shall be as shown in Table 1.

9.5 REQUALIFICATION TESTING

If either of the following conditions occurs, the responsible product engineer shall initiate requalification testing consisting of all applicable parts of the qualification test matrix, Table 1.

- A. A significant design change is made to the existing product. A significant change shall include, but is not limited to, changes in the contact material composition, contact material thickness, contact force, contact surface geometry, underlying material composition, underlying material thickness, insulator design, contact base material, or contact lubrication requirements.
- B. A significant change is made to the manufacturing process which impacts the product form, fit, or function.
- C. A significant event occurs during production or end use requiring corrective action to be taken relative to the product design or manufacturing process.
