Enjoy a better high-definition experience without the cost

Do you wish you could invest in quality HDMI(tm) cables for your multimedia theatre, game console, HD TV or BluRay(tm) player, but have been put off by the high price, especially on longer length HDMI(tm) cables.

The new LMS Data **C-HDMI** series HDMI(tm) cables, available in a wide range of lengths, allow users to enjoy the latest HD audio and video, up to 1.4 specifications for a truly immersive multimedia experience.

Added features supported by many* HD devices included in the **C-HDMI** cables include ethernet data support up to 100Mbps and ARC (audio channel return)* which cuts down on the need for separate audio cables from the TV and BluRay(tm) player for example.

Using a robust and long-life outer jacket, cable shielding for added data performance and of course gold-plated HDMI connectors for an enhanced signal connection with tolerance against corrosion makes the **C-HDMI** cable range the best choice for your HDMI(tm) experience.

specifications:

Shielded HDMI to HDMI A/V cable - multiple lengths

Gold plated (or equiv.) HDMI connectors with strain relief

Supports HDMI 1.4 specification - up to 9Gbps (approx.)

Supports HDMI High Speed with Ethernet*

Supports HDMI with ARC (audio return channel)*

Deep colour and xvYCC support for optimal image quality

1080p high-definition for both picture and sound

Reduced EMI and RF noise across all frequencies

Ideal for BluRay(tm), media centres, HD TVs and consoles

* Ethernet and ARC may not be supported by all HD devices.
