

robox SmartReel™

PLA 1.75mm Filament

Polymaker® PolyWood™

Wood-Effect

RLH-SPC-WD001

PolyWood™ PLA from Polymaker® is 35-40% lighter than ordinary PLA. Unique among wood-effect filaments, PolyWood contains no actual wood fibres. Instead, a foaming agent is activated during the printing process which mimics wood aesthetics and smooths build lines leaving models with a significantly enhanced, high quality appearance.

PolyWood™ applications:

- Ornaments and decorative models
- Various homeware
- Prototypes of wooden parts
- Models for educational use
