Without a Heat Sink, When in Free Air at 25°C, the MCTR50-H is Rated for 2.25W.

The case temperature is to be used for the definition of the applied power limit. The case temperature measurement must be made with a thermocouple contacting the centre of the component mounted on the designed heat sink.

Thermal grease should be applied properly.

RCWV(Rated continuous working voltage)= √(P×R) or Max. Operating voltage whichever is lower
