ZIOL2401SKIT

Starter Kit for ZIOL2401

The ZIOL2401 Starter Kit can be used to evaluate IDT's family of standard cable driver ICs with IO-Link functionality including the ZIOL2401, ZIOL2411, ZIOL2201, and ZIOL2211. The kit provides an overview of the IC's monitoring functions and the configuration options in an application. The ZIOL2401 Starter Kit includes the ZIOL2401 USB-Stick PCB with an on-board microcontroller, IC application and USB interface. The kit also includes the ZIOL2401 Extension Board with a sensor cable connector, external protection circuit and simple test circuit. It can be used to demonstrate simple switching events and to connect two ZIOL2401 Starter Kit devices using the cable connector. A graphical user interface for the kit is available online for free download.

Features

- ZIOL2401 USB-Stick PCB Board
- Extension Board
