

Raspberry Pi 3

Model B+ Media Center Kit

Stream and organize audio, videos, movies and other digital content from the media center you'll build with this kit. Using LibreELEC and running KODI (an award-winning open source media player for the Pi), you'll get a polished, easy to use interface with tons of community support. With a tiny form factor, the Raspberry Pi™ is the perfect solution to achieve a nearly invisible media center solution at a fraction of the price of alternatives. The included full-featured wireless keyboard completes the package.

The Raspberry Pi™ is a low cost, credit-card sized computer geared towards enabling people of all ages to explore computing and programming in languages like Scratch and Python. It runs Linux based operating systems from an SD card and is capable of doing everything a typical computer can do, from browsing the internet to playing games, making spreadsheets and word-processing.

Additionally, the Raspberry Pi™ has the ability to interact with the outside world, and has been used in a wide array of digital projects, from arcade gaming systems, to autonomous robots and automated drip irrigation systems.

Included Inside
