

EAN:	4013288183934	Size:	155x130x55 mm
Part number:	05051043001	Weight:	546 g
Article number:	KK 60 ESD	Country of origin:	CZ
		Customs tariff number:	82079030

- Suitable for manual and power tool operations
- Smooth hard zones for high speed turning, soft grip zones for high torque transfer
- Rapidaptor quick-release chuck
- Tough viscous bits for universal use
- In robust pouch

ESD-safe Wera tool. 16 bits. Includes 2 817 VDE holders, multi-component for high working speeds and particularly ergonomic screwdriving. Dependable protection against electrostatic energy and associated damage. Compact set that enables both manual as well as power tool operations. Simple sorting according to profile and size, easy bit removal and reinsertion; with belt clip, 18-piece.

ESD Series

Set contents:

Wera ESD Tools

The requirements for ESD-safe screwdrivers are specified in the European standard DIN EN 61340-5-1. This standard also includes a handle that has to be out of a defined conductive material. The Wera products in the ESD series satisfy these standards and the even more stringent requirements demanded by some technology companies.

High protection

The electric surface resistance of the Wera ESD material is $\leq 10^9$ ohm. This securely protects components against electrostatic energy and associated damage.

Kraftform

The basic idea for the prototype of the Kraftform handle – that the hand should dictate the design – has, right through to today, proved to be correct. In cooperation with the internationally recognised Fraunhofer IAO Institute, Wera developed a screwdriver handle designed to match the shape of the human hand as long ago as the 1960s. After a long development phase, the Wera Kraftform handle was launched to the market in 1968. It has been optimised through the years with new technologies, but has kept its proven shape. After all, the human hand has not changed either.

Prevents hand injuries

The outstanding design of the Kraftform handle that fits perfectly into the hand prevents hand injuries such as blisters and calluses.

ESD Series

Rapid-in and self-lock

The bit can be pushed into the adaptor without moving the sleeve. The lock is activated automatically as soon as the bit is applied to the screw. Bits are held securely and wobble-free.

Rapid-out

Simply push the sleeve forward to change the bit. The spring mechanism lifts the bit off the magnet and unlocks the tool. The bit can be easily removed. The rapid-out function makes it easy to remove even the smallest bits without extra tools.

Chuck-all

The Rapidaptor quick-release chucks hold ¼" DIN ISO 1173-C 6,3 and E 6,3 as well as Wera series 1 and 4 bits.

Single-hand function

Every function of the Rapidator quick-release chuck, such as inserting or releasing bits, can be carried out with one hand. This is faster, more economical and more ergonomic. There are no unnecessary manoeuvres.
