

VAT FILM X 5 SHEETS + 10 GASKETS

This pack contains **five sheets of 100-microns FEP film**, cut to the correct size for your Liquid Crystal Pro vat. We recommend that you re-skin your vat after 400 hours of printing, or if any visible damage is detected. 100-micron FEP film provides a flexible, non-stick surface to ensure a good release of the printed part from the screen. It is thick and tough enough to last for days of printing time.

Also included in this pack are **five vat top gaskets and five vat bottom gaskets**. We recommend that you change both each time you re-skin your vat (after approximately 400 hours of printing). The Neoprene gaskets ensure that the vat is totally sealed
