[Overview\(//support/developer-resources/evaluation-and-development-boards/lpcxpresso-boards/lpcxpresso-board-for-lpc11c24-with-cr](#)

Overview

Pioneered by NXP and Embedded Artists, the low-cost LPCXpresso target boards to get you up and running quickly with LPC microcontrollers. Designed for simple, rapid prototyping and evaluation, LPCXpresso development boards work with Eclipse/GNU-based tools from NXP and other industry leading partner toolchains.

This LPCXpresso board is populated with the LPC11C24 to demonstrate and enable features of the LPC11Cxx devices that feature an on-board CAN transceiver. The LPCXpresso LPC11C24 combines the highly flexible peripheral set of the LPC11C24 and the low price point of the LPCXpresso board.

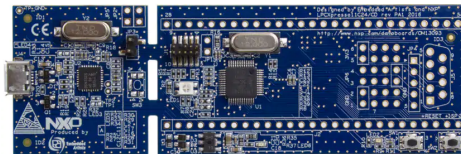

The board also includes an on-board, CMSIS-DAP compatible debug probe, as well as a connector for use with 3rd party debug probes.

The order code for this board is: **OM13093**
