

Seno Applicators

Three applicators each containing safe, ready-to-use PCB chemistry, which offers a clean and efficient alternative to processing in trays. Each applicator is sealed with a valve mechanism terminated by a sponge which dispenses precisely the right amount on the board. All applicators work at room temperature, are waste free, and when exhausted can be disposed of without any special precautions.

SN100 Developer Applicator.

Applicator which develops all alkaline positive working resists. Contains 50ml of developer sufficient to process approximately 40 standard Eurocards (100 x 160mm)

SN120 Resist Strip Applicator

Applicator which quickly removes (strips) all remaining Photoresist from etched boards. Contains 80ml of resist-strip sufficient to process approximately 30 standard Eurocards (100 x 160mm)

SN140 Flux Applicator

Applicator which applies a protective lacquer to a clean etched circuit, preventing any further oxidation. Lacquer also acts as an excellent solder flux. Contains approximately 80ml of flux sufficient to process approximately 70 standard Eurocards (100 x 160mm)
