Inline counter terminal block, complete with accessories (connectors and labeling fields), 1 counter input, 1 control input, 1 output, 24 V DC, 500 mA, 3-wire connection method

Product Description

The terminal is designed for use within an Inline station.

The counter terminal acquires and processes fast pulse sequences from sensors. It has a counter input (source), a control input (gate), and a switching output that can be freely parameterized. The switching output is set independently of the terminal. Fast response times can therefore be achieved, which are independent of both the bus and controller.

The terminal can be operated in four different operating modes: frequency measurement, event counting, time measurement, and pulse generation (pulse generator).

Your advantages

- ✓ 1 counter input
- ✓ 1 control input
- ✓ 1 freely parameterizable switching output
- ✓ Four operating modes: event counting, time or state-controlled frequency measurement, time measurement (period or pulse length), and pulse generator
- ✓ Processing of 5 V or 24 V signals
- ✓ Input frequency of up to 100 kHz
- ✓ 16-bit counter value for time measurement
- ✓ 24-bit counter value for event counting and frequency measurement
