Basic advice

 **WARNING**

Danger of death through electric shock or fire!

➤ Installation should only be carried out by a professional electrician!

- The device is designed for installation on DIN top hat rails (in accordance with EN 50022)
- Power reserve (10 years) is reduced if memory card is inserted (in battery operation)
- OBELISK top2 memory card: Avoid mechanical stress or contamination caused by other storage/ Transport vermeiden (available if required)

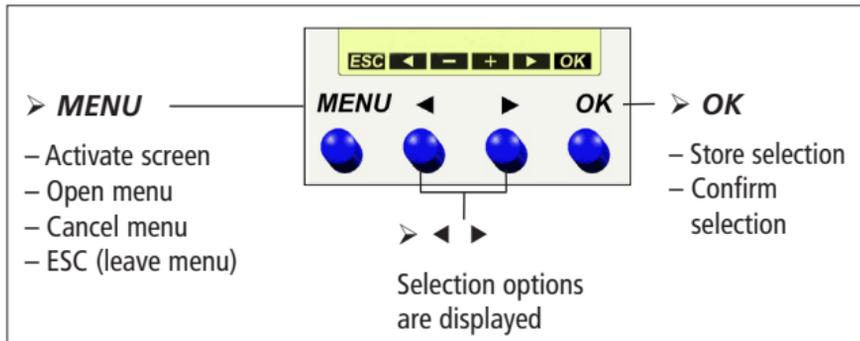

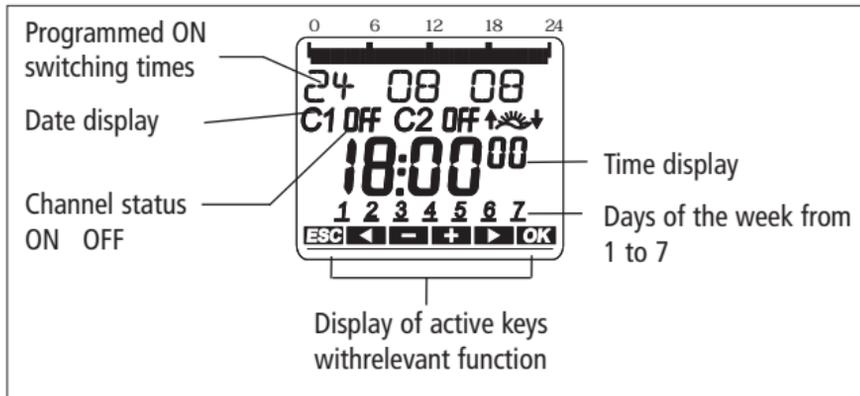

Designated use

- The digital twilight switch is used for lighting equipment (streets), external stairways, display windows, entrances etc.
- Only use in enclosed dry spaces (equipment); sensor is installed in the open-air

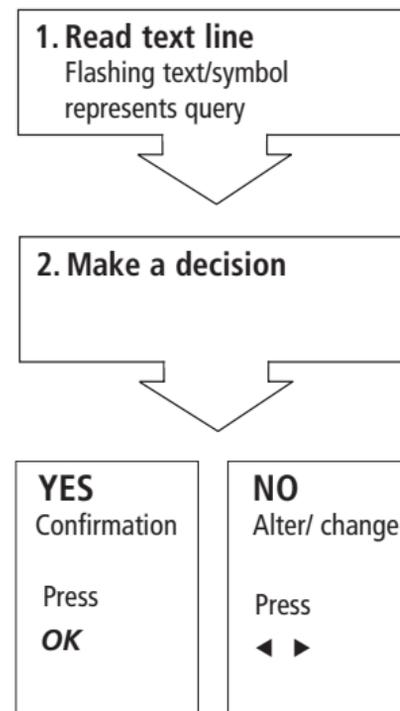

Disposal

Dispose of equipment in an environmentally-friendly manner

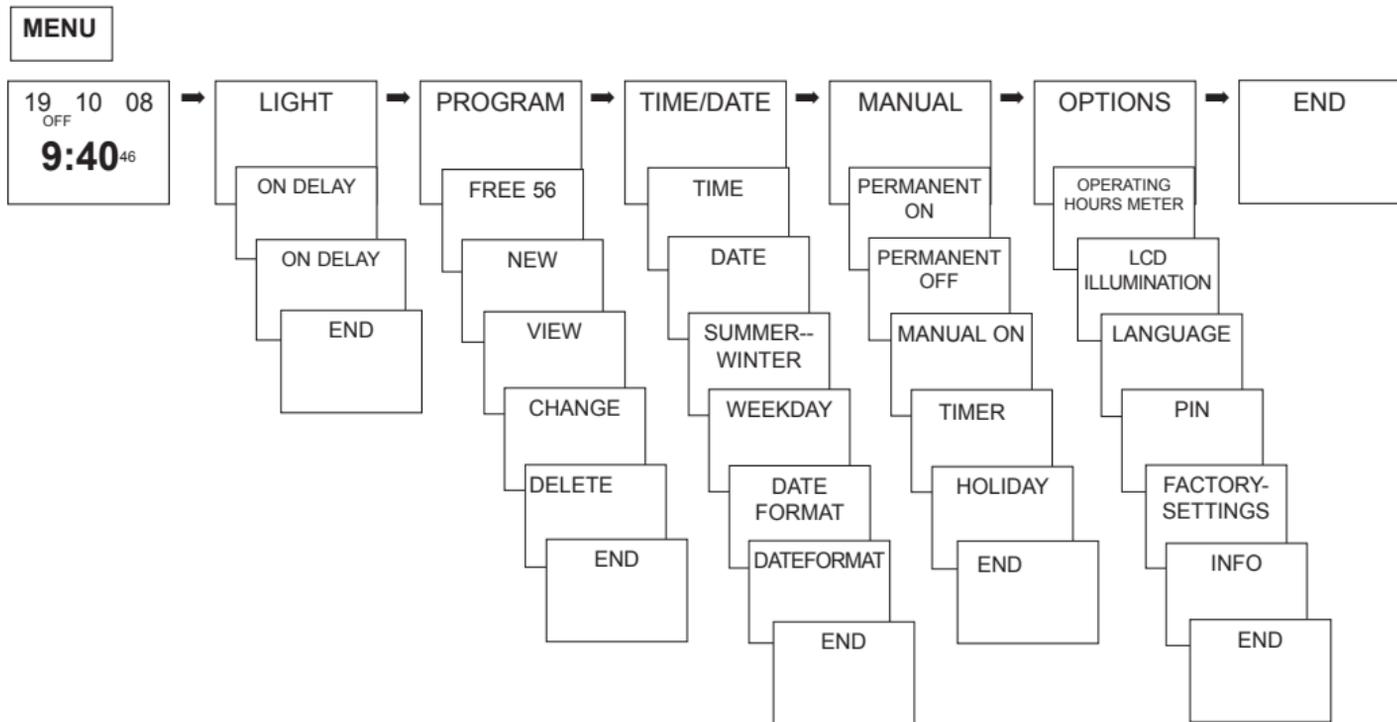

Screen display and keys

Operating instructions

Overview of menu selection

Connection/installation

WARNING

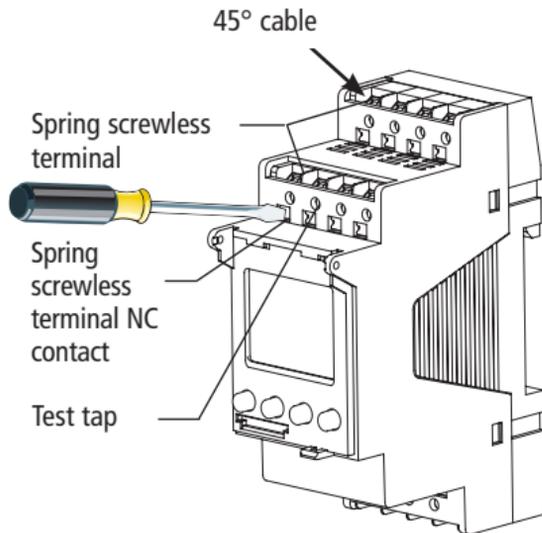

Warning, danger of death through electric shock!

- Must be installed by a professional electrician!
- Connect power source!
- Cover or shield any adjacent live components live components.
- Ensure device cannot be switched on!
- Check power supply is disconnected!
- Earth and bypass!

Connect cable

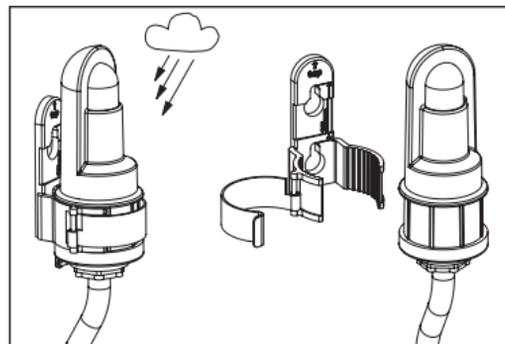

- Strip cable by 8 mm (max. 9).
- Insert cable at 45° in the open terminal (2 cables per terminal position possible).
- Press screwdriver downwards to open spring screwless terminal.

Connection/installation of light sensor

GB

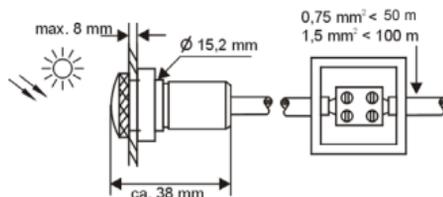

- Take length of connection cable into account
max. 100 m 2 x 1,5 mm², max. 50 m 2 x 0,75 mm²
- Avoid running sensor wiring parallel to
- mains power cables. 0,5–2,5 mm², strip cable by 10 mm
(max. 11 mm).

Installing light sensor

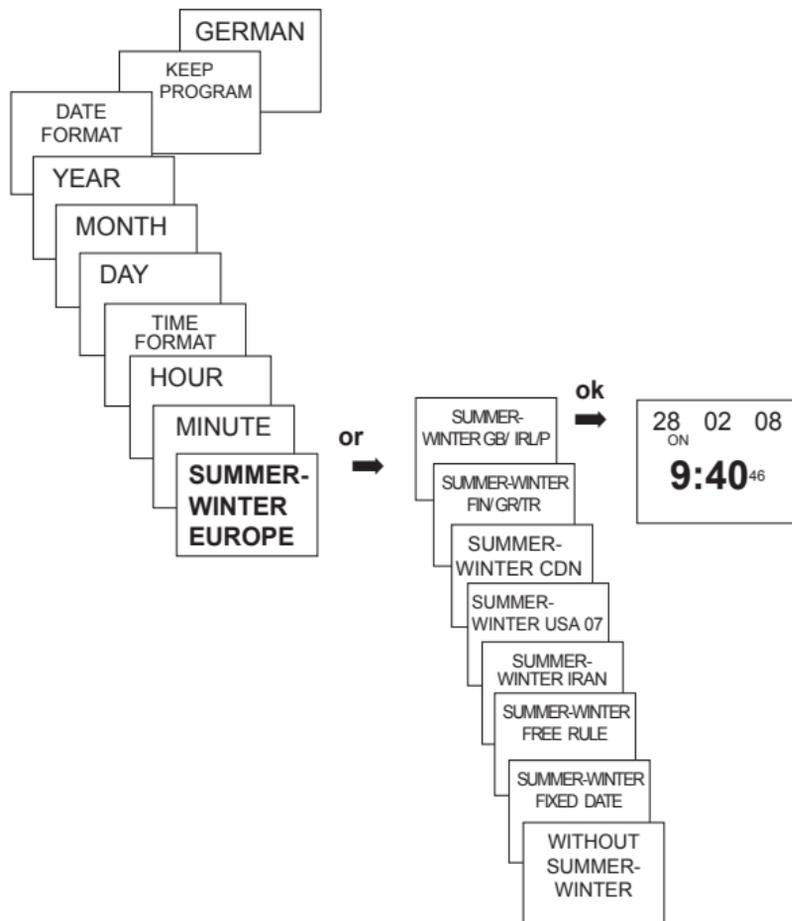

Mounting light sensor

Initial start-up

Set language, date, time as well as summer/ winter time

- Press required key and display follows on screen (see fig).

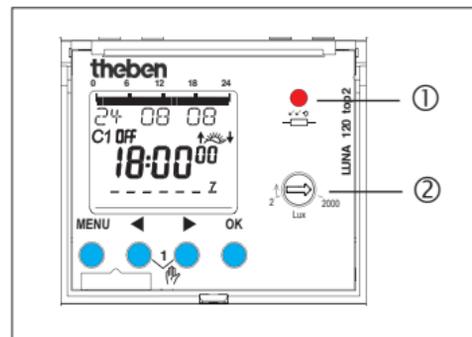

Set lux values

The twilight switch with external light sensor controls lighting equipment for streets, stairways, entrances etc.

- Set desired range from I-V with a screw tab a screwdriver on the potentiometer ② setting (see fig).

The red LED lights up as soon as the set Lux value falls below the ambient brightness level.

Brightness values

Daylight (bright)	80,000 lx
Office accommodation	500 lx
Hallways and stairs	100–150 lx
Street lighting	15 lx
Full moon	ca. 0.3 lx

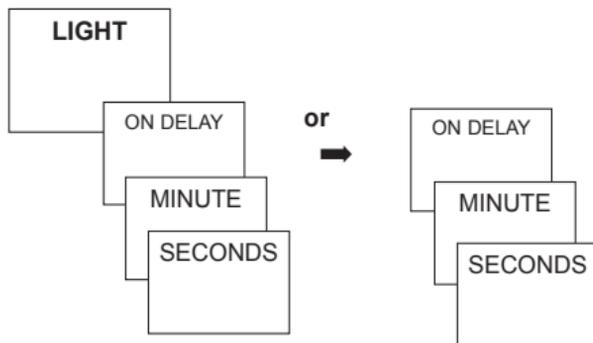

- ② Potentiometer for setting brightness: 2–2000 lx
- ① Red LED for the instantaneous display of switching status

Set delay

An on/off delay of **1 minute** is preset to avoid faulty operation caused by lightning, car headlights etc.

When the delay ends the channel status will flash ON/OFF.

➤ Press **MENU** (see fig.).

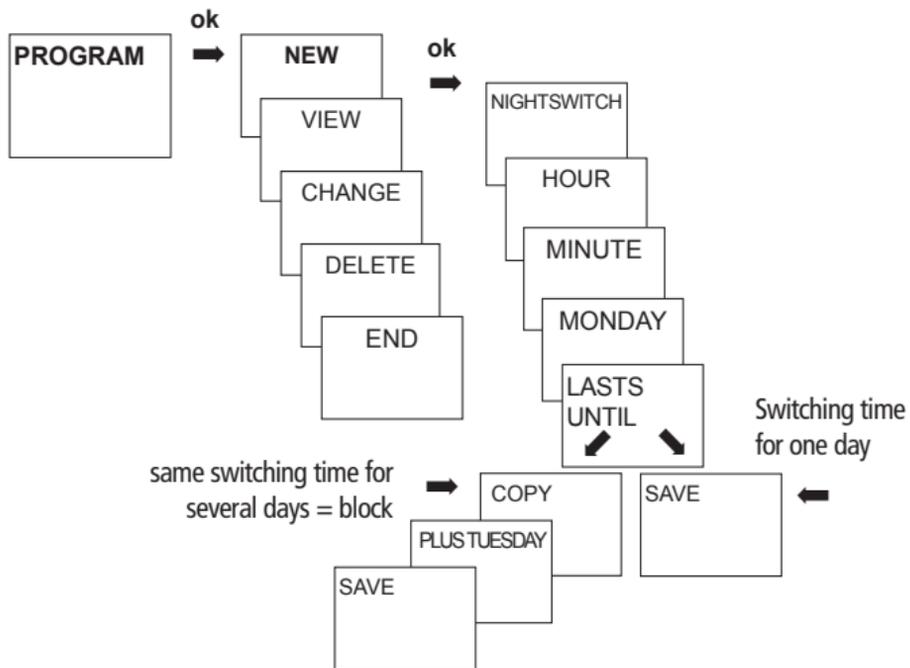

Set switching time

(e.g. with a night switch off at the weekend 23:00–05:00 Uhr)

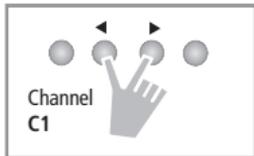

➤ Press **MENU** (see fig.).

There are 56 available memory cells.

Manual and permanent switching

Manual and permanent switching can be set using the menu in **MANUAL** or (in the automatic screen) by key combination (see fig).

Activate manual switching

➤ Briefly press both keys simultaneously.

Activate permanent switching

➤ Simultaneously press both keys for 2 seconds.

Cancelling manual/permanent switching

➤ Press both keys simultaneously.

Manual control

Reversing the channel status to the next automatic or programmed switching.

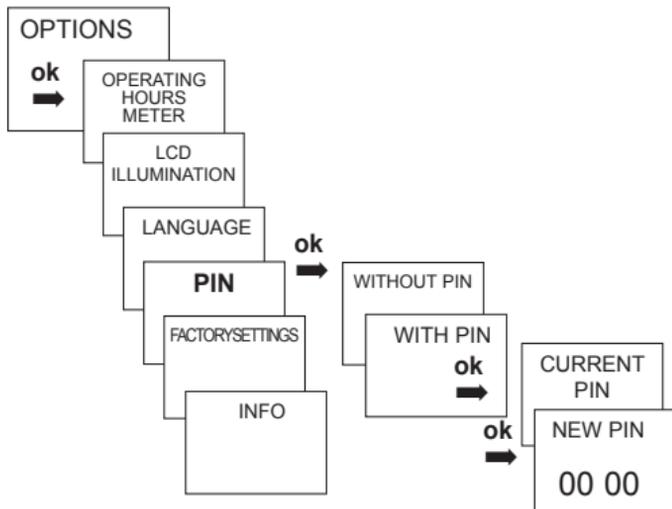

Permanent switching

As long as a permanent switching (on or off) is activated, the programmed switching times are ineffective.

Enter PIN code

The **PIN-Code** is set via the menu in **OPTIONS** (see picture).

If you have forgotten the PIN please call the Theben Hotline.

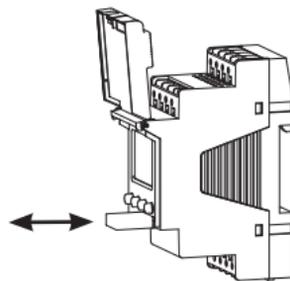

OBELISK top2 memory card (available if required)

GB

Using memory card

- Insert memory card in the timer.
- Request savedswitch timings, read to/from the timer or start Obelisk program.
- Remove OBELISK top2 memory card (no. 907 0 404) after programming etc. and store in cover.

Technical data

Nominal voltage:	220–240 V~, +10 %/-15 %
Frequency:	50–60 Hz
Brightness range:	2–2.000 lx
On/off switch delay:	0–59 min
Power consumption:	type 3 VA
Switching output:	phase-independent (zero-crossover switching)
Contact:	two way switch
Contact material:	AgSnO ₂
Switching capacity:	16 A/250 V~ $\cos \varphi = 1$ 10 A/250 V~ $\cos \varphi = 0,6$
Fluorescent lamps:	10 AX
Switching capacity min.:	10 mA/230 V AC 100 mA/12 V AC/DC
Glow lamp load:	2600 W
Halogen lamp load:	2600 W
Fluorescent lamps (VVG – low-loss series devices):	
uncorrected:	2300 VA
series-corrected:	2300 VA
parallel-corrected:	800 VA (80µF)
Lead-lag circuit (duo):	2300 VA
Fluorescent lamps (EVG – Electronic series devices):	650 VA
Mercury and sodium vapour lamps:	
parallel-corrected:	800 VA (80µF)

Compact fluorescent tubes (EVG):	22x7 W, 18x11 W, 16x15 W, 16x20 W, 14x23 W
Permissible ambient temperature:	–30 °C ... +55 °C (device) –40 °C ... +70 °C (sensor)
Protection class:	II (light sensors III) in accordance with EN 60730-1 if correctly
Protection rating:	IP 20, IP 55 (Mounted light sensor), IP 65 (Installation light sensor) in accordance with EN 60529
