

PD70211EVB50FW-5

5V/50W Isolated Active Clamp Forward Converter PD

Evaluation Board User Guide

Revision 2.0

PRODUCTION DATA – Information contained in this document is proprietary to Microsemi and is current as of publication date. This document may not be modified in any way without the express written consent of Microsemi. Product processing does not necessarily include testing of all parameters. Microsemi reserves the right to change the configuration and performance of the product and to discontinue product at any time.

1 About this Guide

This user guide provides both description and operation procedures for Microsemi's PD70211EVB50FW evaluating board. This board is used for evaluating the performance of PD70211A PD controller with integrated switching regulator, and PD70224 Dual MOSFET – Based Bridge Rectifier.

PD70211ILQ device supports both the standard IEEE802.3at PD application interface, and a PWM controller that is used to provide the PD operational voltage.

The evaluation board supports a 50 Watt, 5V output in its existing configuration, with no heat sink, at room temperature.

1.1 Audience

This user guide is intended for qualified personnel, meaning operators and technicians who have a background in basic concepts of electronics.

1.2 Organization

This guide is divided into several sections as follows:

• Chapter 1	About this Guide: Describes the objectives, audience, and organization.
• Chapter 2	Introduction: Provides an overview about evaluation board's main functions, features, physical characteristics and ordering information.
• Chapter 3	Physical Description: Provides explanation related to the physical description (switches, jumpers, connectors).
• Chapter 4	Electrical Characteristics: Provides electrical characteristics of the evaluation board.
• Chapter 5	Installation: Provides description of the installation process.
• Chapter 6	Test Data: Provides board test data information
• Chapter 7	Schematic: Provides board schematic diagram
• Chapter 8	List of Material: Provides board's list of materials.
• Chapter 9	Board Layout: Provides board Gerber files description for all layers..

1.3 Reference Documents

PD70211 datasheet, catalogue number DS_PD70211

PD70224 datasheet, catalogue number DS_PD70224

2 Introduction

Microsemi's PD70211ILQ device is part of a family of devices which are targeted for realizing the 802.3at standard PD interface.

The PD interface family of devices includes the following:

Device type	Power capability	Integrates PWM controller
PD70100	IEEE802.3at Type 1 (IEEE802.3 af level)	No
PD70101	IEEE802.3at Type 1 (IEEE802.3 af level)	Yes
PD70200	IEEE802.3at Type 2	No
PD70201	IEEE802.3at Type 2	Yes
PD70210(A)	2 x IEEE802.3at Type 2 (4 pair) HDBaseT (95W)	No
PD70211	2 x IEEE802.3at Type 2 (4 pair) HDBaseT (95W)	Yes

Microsemi's PD70211EVB50FW Evaluation Board (see

Figure 2) provides designers with an environment needed for evaluating the performance and implementation of PD applications based on PD70211 controller.

The board is using a single PD controller, PD70211ILQ, to support the Detection, Class, and Power Supplying phases on the 4 Pairs of the Cat5 cable. The board supports sync detection of the 4 pairs. PD70211ILQ supports the current of the HDBaseT over 4 Pairs, which is more than twice the power of a standard IEEE802.3AT Type 2 interface.

All necessary steps and connection instructions required to install and operate this board are provided within this document.

Figure 2: PD70211EVB50FW Evaluation Board – General View

Evaluation Boards Ordering Information

Microsemi supplies the following Evaluation Board as shown below:

Ordering Number	Description
PD70211EVB50FW-5	2 x IEEE802.3at Type 2 (4 pair) PD based on PD70211 device having 4 pair supply, controlling an isolated Forward converter , having a 5V 10 Amp output.

2.1 Evaluation Board Features

- Designed to support Data and Spare current by a single PD70211A device
- Power is supplied through the 4-pairs of the Cat5 cable
- Wall Adapter input – Standard Barrel Jack available for connecting to an external 48V Wall Adapter.
- Data pass-through connector
- On board PSE class type LED indicators
- On board AT detected LED indicator
- On board 4P_AT detected LED indicator
- On board HD detected LED indicator
- On board 4P_HD detected LED indicator
- On board Power Good LED indicator which may be configured to monitor PD Front End or VPP UVLO.
- Ta: 0° to +70°C (with derating curve)
- RoHS compliant

2.2 Physical Characteristics

Table 1 lists evaluation board's physical characteristics.

Table 1: Physical Characteristics

Parameter	Value
Mechanical dimensions in mm	165 x 57 x 16 mm (L x W x H)

3 Physical Description

3.1 Package Contents

Upon opening the Evaluation Board package, verify the following part is included.

If it seems damaged, contact local representative or Microsemi's headquarters.

Package content for standard shipments is:

- PD70211EVB50FW Evaluation Board.
- Wall Adapter Input Cable

3.2 Connectors

The following sections provide both general and detailed information regarding unit's connectors.

3.2.1 Connectors Table

Table 2 lists the Evaluation Board's connectors.

Table 2: Connectors List

#	Connector	Name	Description
1	J1	RJ45 Connector	RJ45 port for Data + Power In for PSE connection
2	J2	Wall Adapter Input	Standard Barrel Jack used for 48V Wall Adapter. Wall adapter connection will be automatically sensed and will override the PSE power connected to J1.
3	J3, TP6 (-) and TP5 (+)	Converter Output	Terminal pins for connecting a load to 5V output. J3 provides screw terminals for easy connection; TP5 and TP6 provide solder pads for soldered connection.
4	J4	RJ45 Connector	RJ45 port for Data pass – through output
5	VIN+, VINRTN	Converter Input Monitor	Converter Input Rail Monitor – Used as a monitor for DC-DC primary rail voltage.
6	TP1 and TP2	Frequency Analyzer Connection	Used to connect to an external frequency response analyzer for measuring loop stability.

3.2.2 Connectors Detailed Explanation

(The numbering is in reference to the numbers listed in Table 2.)

1. RJ45 Connectors.

See Figure 3.

Table 3: RJ45 Connectors

J1 & J4 Pin No	Signal Name	Description
J1 - 1, 2	Data and Power In	Data and power input to powered device (PoE Master Negative data port)
J1 - 3, 6	Data and Power In	Data and power input to powered device (PoE Master Positive data port)
J1 - 4, 5	Data and Power In	Data and power input to powered device (PoE Master Positive data port)

J1 & J4 Pin No	Signal Name	Description
J1 - 7, 8	Data and Power In	Data and power input to powered device (PoE Master Negative data port)
J4 - 1, 2	Data Output	Isolated data pass-through to external monitoring device.
J4 - 3, 6	Data Output	Isolated data pass-through to external monitoring device.
J4 - 4, 5	Data Output	Isolated data pass-through to external monitoring device.
J4 - 7, 8	Data Output	Isolated data pass-through to external monitoring device.

Figure 3: Front RJ45 and Auxiliary 48V Wall Adapter Connectors

2. Wall Adapter Connections

See Figure 3.

J2 Pin No	Signal Name	Description
Center Pin	VIN (+)	42V to 57V input from wall adapter.
Outer Barrel	VIN (-)	Wall Adapter Return

3. V_{out} Connections
 See Figure 4.

Table 4: Output Load Connections

Pin No.	Signal Name	Description
J3 - 2	Vout (-)	Return of DCDC output voltage
J3 - 1	Vout (+)	Positive DCDC output voltage
TP6	Vout (-)	Return of DCDC output voltage
TP5	Vout (+)	Positive DCDC output voltage

Figure 4: V_{out} Connections

3.3 Indications

The following sections provide general information regarding unit's indications.

1. LED Indication

See Figure 5.

3.3.1.1 LED Indication

See Figure 5.

D16 is the AT_FLAG indication LED, a PD70211 device output signal indicating the device has detected a 2 finger class event from the PSE side in the class stage. The flag will be operative at 3, 4, and 6 fingers detection as well.

D15 is the 4P_AT indication LED, a PD70211 device output signal indicating the device has detected a 4 finger class event from the PSE side in the class stage, or a 2 finger class event from the PSE side in the class stage, and SUPP_Sa and SUPP_Sb are both High.

The flag will be operative at 6 fingers detection as well.

D20 is the HD_FLAG indication LED, a PD70211 device output signal indicating the device has detected a 3 finger class event from the PSE side in the class stage.

The flag will be operative at 6 fingers detection as well.

D19 is the 4P_HD indication LED, a PD70211 device output signal indicating the device has detected a 6 finger class event from the PSE side in the class stage.

D14 is the Power Good indication. This LED indicates the presence of power. This indicator may be configured to monitor PD Front End VAUX (Asserts when VPP = 36V min.; de-asserts when VPP = 31V min.), or it may be configured to monitor the VPP UVLO, which is user selectable by the resistor values at VINS and HYST pins (R13, R19, and R25). See the PD70211 datasheet for further details regarding setting VPP UVLO limits. EVB default for Power Good EVB is monitoring VPP UVLO, and will track the operation of the DC-DC converter. To change Power Good to monitor PD Front End VAUX:

- 1) Remove R51, 100 Ohm Resistor (located on PCB bottom under D10).
- 2) Add R50 Zero Ohm Jumper (Also located on PCB bottom under D10).
- 3) Insure that only R51 or R50 are installed; do not operate with both resistors installed.

Figure 5: LED Indications

4 Electrical Characteristics

Evaluation board's electrical characteristics are described below:

Table 5: Electrical Characteristics

Parameter		Min	Max	
Main DC Supply – J1, VIN+, VINRTN		42*	57	V
Wall Adapter Supply – J2, VIN+, VINRTN		42	57	V
Maximum Available Current			10	A
Port Isolation to Chassis		-	1.5	kVrms

*After start-up, the minimum voltage is 37V with load $\leq 13W$ per IEEE specification.

5 Installation

5.1 Preliminary Considerations and Safety Precautions

- If using an external supply in place of a PSE, verify the external power supply is turned “off” before all peripheral devices are connected. Insure the external supply is connected to the RJ45 input (J1) per Table 3.

5.2 Initial Configuration

Note: It is important to verify evaluation board is setup as shown in Figure 6 prior to starting any operation.

1. Connect load to evaluation board (J3 -1 (+) & J3 - 2 (-), or TP17 (+) & TP16 (-)).
 2. Connect a Cat5 cable from PSE to Evaluation Board (J1), or a 48V Wall Adapter to Evaluation Board (J2).
- Note: Wall Adapter will override power from PSE.

Figure 6: Test Setup

6 Test Data

This chapter describes EVB test data under various loads and POE input voltage levels. The efficiency is indicated up to 50W output power.

- Efficiency is measured at the input to the PD70224. It does not contain the RJ45 Connector or Magnetics

$$Total\ Eff = \frac{V_{out} * I_{out}}{V_{in} * I_{in}}$$

6.1 50W Efficiency vs Input Voltage to the PD70224
