

A Tutorial in Programming the Microchip PIC

This is an ideal book for those who have basic knowledge of microcontrollers, by the author of "The Greatest Little PIC Book" - Gordon MacNee and Paul Benford. The book leads the reader through a number of code segments that can be used as standalone blocks of code or integrated into other projects. It also covers programming principals and techniques for the PIC and configuration of the most popular peripherals. All code examples are on the accompanying 3.5 inch disk.

Code segments covered:

- USART set-up for RS232 communications in hardware
- How to communicate to a PC using software USART
- How to handle timers and interrupts
- ADC set up and use
- LCD interface
- An introduction to the MPLAB development environment
