1 MAIN FEATURES

ITEM	CONTENTS
Display Format	64 x 48 Dots
Overall Dimensions(W*H*T)	18.46 x 18.10 x 2.10 mm
Active Area(W*H)	13.42 x 10.06 mm
Viewing Area(W*H)	15.42 x 12.06 mm
Display Mode	Passive Matrix (0.66")
Display Colour	Blue
Driving Method	1 / 48 duty
Driver IC	SSD1305Z
Operating temperature	-30°C ~ +70°C
Storage temperature	-40°C ~ +80°C

3 ELECTRICAL SPECIFICATION

3.1 ABSOLUTE MAXIMUM RATINGS

Item	Symbol	Min	Max	Unit	Note
Supply Voltage	V _{DD}	-0.3	4	V	Note 1,2
Supply Voltage for I/O pins	V _{DDIO}	-0.3	V _{DD} +0.5	V	
Driver Supply Voltage	V _{CC}	0	15	V	
Operating Temperature	T _{op}	-30	70	°C	-
Storage Temperature	T _{st}	-40	80	°C	-
Static Electricity	Be sure that you are grounded when handling displays.				

Note 1: All the above voltage are on the basis of “GND=0V”.

Note 2: When this module is used beyond the above absolute maximum ratings, permanent breakage of the module may occur. Also, for normal operations, it’s desirable to use this module under the conditions according to Section 3 “Electrical Characteristics”. If this module is used beyond these conditions, malfunctioning of the module can occur and the reliability of the module may deteriorate.

3.1.1 Regarding the Gradation

Although this module possesses the gradation function, respective gradation levels will vary depending on the production conditions etc. Also, the temperature range where the grading function can be guaranteed will be -10~60°C.

Product No.	DD-6448BE-2A	REV. A

3.2 ELECTRICAL CHARACTERISTICS

3.2.1 DC CHARACTERISTICS

Characteristics	Symbol	Conditions	Min	Typ	Max	Unit
Supply Voltage	V_{DD}		2.6	2.8	3.5	V
Supply Voltage for I/O pins	V_{DDIO}		1.6	2.8	V_{DD}	V
Driver Supply Voltage	V_{CC}		8.5	9	9.5	V
Operating Current for V_{DD} & V_{DDIO}	I_{DD} & $DDIO$	Note 1	-	0.1	0.2	mA
		Note 2	-	0.1	0.2	mA
Operating Current for V_{CC}	I_{CC}	Note 1	-	1.5	2.2	mA
		Note 2	-	2.5	3.5	mA
Sleep Mode Current for V_{DD} & V_{DDIO}	I_{DD} & $DDIO$ SLEEP		-	-	10	μ A
Sleep Mode Current for V_{CC}	I_{CC} SLEEP		-	-	10	μ A
High Level Input	V_{IH}		$0.8 \times V_{DD}$	-	V_{DD}	V
Low Level Input	V_{IL}		0	-	$0.2 \times V_{DD}$	V
High Level Output	V_{OH}	$I_{out}=100\mu A,$ 3.3Mhz	$0.9 \times V_{DD}$	-	V_{DD}	V
Low Level Output	V_{OL}		0	-	$0.1 \times V_{DD}$	V

Note1: $V_{DD} = 2.8V$, $V_{CC} = 9V$, Frame rate = 190Hz, contrast setting = 0x2D, 50% display area turn on.

Note 2: $V_{DD} = 2.8V$, $V_{CC} = 9V$, Frame rate = 190Hz, contrast setting = 0x2D, 100% display area turn on.

INTERFACE PIN ASSIGNMENT

No.	Symbol	I/O	Function															
1	N.C.	-	Reserved Pin (Supporting Pin). The supporting pins can reduce the influences from stresses on the function pins.															
2	VCC	P	Power Supply for OLE system. This is the most positive voltage supply pin of the chip. It must be connected to external source.															
3	VSS	P	Ground for OLED panel. This is a ground pin. It also acts as a reference for the logic pins, the OLED driving voltages and the analog circuits. It must be connected to external ground.															
4	VDD	P	Power Supply for Core Logic operation This is a voltage supply pin. It must be connected to external source.															
5	VDDIO	P	Power Supply for Interface Logic level. This is a voltage supply pin. It should be match with MCU interface voltage level. VDDIO must allways be equal or lower than VDD															
6	BS1	I	Communicating Protocol Select. These pins are MCU interface selection input. See the following table:															
7	BS2	I	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th></th> <th>I²C</th> <th>6800-parallel</th> <th>8080-parallel</th> <th>Serial</th> </tr> </thead> <tbody> <tr> <td>BS1</td> <td>1</td> <td>0</td> <td>1</td> <td>0</td> </tr> <tr> <td>BS2</td> <td>0</td> <td>1</td> <td>1</td> <td>0</td> </tr> </tbody> </table> <p>Note “0” is connected to Vss “1” is connected to VDDIO</p>		I ² C	6800-parallel	8080-parallel	Serial	BS1	1	0	1	0	BS2	0	1	1	0
	I ² C	6800-parallel	8080-parallel	Serial														
BS1	1	0	1	0														
BS2	0	1	1	0														
8	CS	I	Chip Select. This pin is the chip select input. The chip is enabled for MCU communication only when CS# is pulled low.															
9	RES	I	Power Reset for Controller and Driver. This pin is reset signal input. When the pin is low, initialization of the chip executed.															
10	D/C	I	Data/Command Control. This pin is Data/Command control pin. When the pin is pulled high, the input at D7~D0 is treated as display data. When the pin is pulled low, the input at D7~D0 will be transferred to the command register. For detail relationship to MCU interface signal, please refer to the Timing Characteristics Diagrams.															
11	WR	I	Read/Write Select or Write This pin is MCU interface input. When interfacing to a 68xx series microprocessor, this pin will be used as Read/Write (R/W#) selection input. Pull this pin to “High” for read mode and pull it to “Low” for write mode. When 80xx interface mode is selected, this pin will be the write (W/R#) input. Data write operation is initiated when this pin is pulled low and the CS# is pulled low.															

Product No.	DD-6448BE-2A	REV. A
		REV.

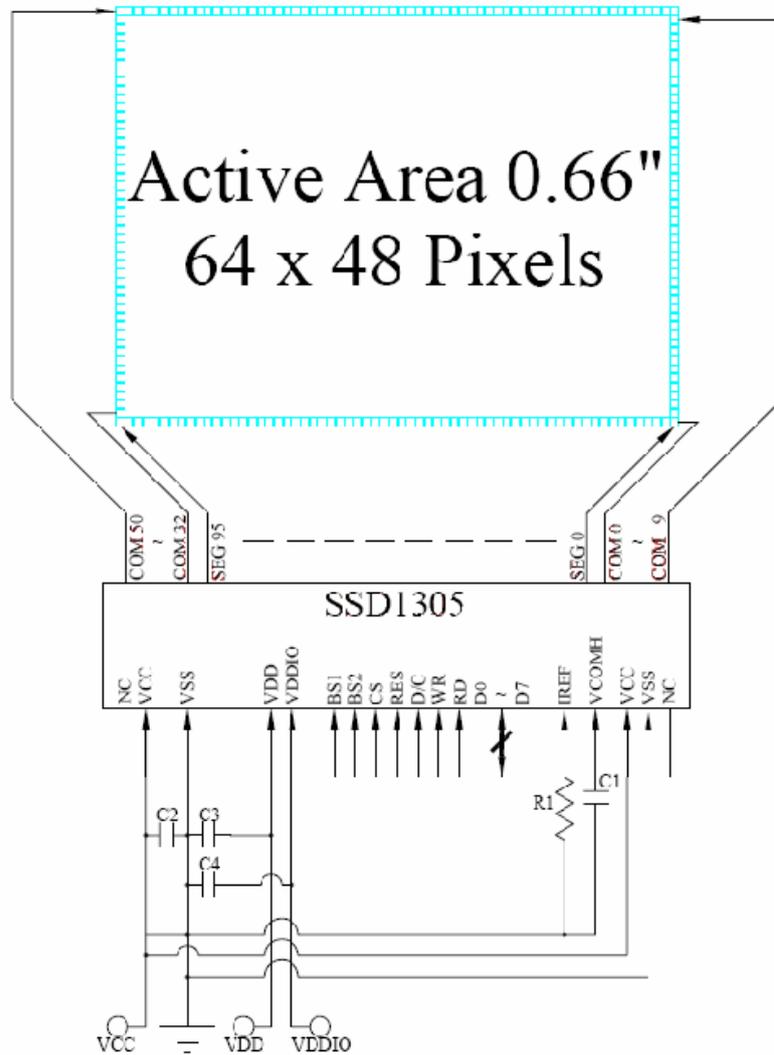

Page	9 / 27
------	--------

12	RD	I	<p>Read/Write Enable or Read. This pin is MCU interface input. When interfacing to a 68xx series microprocessor, this pin will be used as the Enable (E) signal. Read/write operation is initiated when this pin is pulled high and the CS# is pulled low. When connecting to an 80xx microprocessor, this pin receives the Read (RD#) signal. Data read operation is initiated when this pin is pulled low and CS# is pulled low.</p>
13~20	D0~D7	I/O	<p>Host Data Input / Output Bus These pins are 8 bit bi directional data bus to be connected to the microprocessor's data bus. When serial mode is selected, D1 will be the serial data input SDIN and D0 will be the serial clock input SCLK.</p>
21	IREF	I	<p>Current Reference for Brightness adjustment This pin is segment current reference pin. A resistor should be connected between this pin and VSS. Set the current at 10μA</p>
22	VCOMH	O	<p>Voltage Output High Level for COM signal This pin is the input pin for the voltage output high level for COM signals. A capacitor should be connected between this pin and VSS.</p>
23	VCC	P	<p>Power Supply for OLE sytem This is the most positive voltage supply pin of the chip. It must be connected to external source.</p>
24	VSS		<p>Ground for OLED panel. This is a ground pin. It also acts as a reference for the logic pins, the OLED driving voltages and the analog circuits. It must be connected to external ground.</p>
25	NC		<p>Reserved Pin (Supporting Pin). The supporting pins can reduce the influences from stresses on the function pins.</p>

3.4 TIMING CHARACTERISTICS

3.5.1 AC CHARACTERISTICS

3.5.1.1 6800-Series MPU Parallel Interface Timing Characteristics:

Characteristics	Symbol	Min	Max	Unit
Clock Cycle Time	t_{cycle}	300	-	ns
Address Setup Time	t_{AS}	0	-	ns
Address Hold Time	t_{AH}	0	-	ns
Write Data Setup Time	t_{DSW}	40	-	ns
Write Data Hold Time	t_{DHW}	7	-	ns
Read Data Hold Time	t_{DHR}	20	-	ns
Output Disable Time	t_{OH}	-	70	ns
Access Time	t_{ACC}	-	140	ns
Chip Select Low Pulse Width (Read) Chip Select Low Pulse Width (Write)	PW_{CSL}	120 60	-	ns
Chip Select High Pulse Width (Read) Chip Select High Pulse Width (Write)	PW_{CSH}	60 60	-	ns
Rise Time	t_{R}	-	15	ns
Fall Time	t_{F}	-	15	ns

* $V_{\text{DD}} - V_{\text{SS}} = 2.4 \text{ to } 3.5\text{V}$, $T_a = 25^\circ\text{C}$

3.5.1.3 Serial Interface Timing Characteristics:

Characteristics	Symbol	Min	Max	Unit
Clock Cycle Time	t_{cycle}	250	-	ns
Address Setup Time	t_{AS}	150	-	ns
Address Hold Time	t_{AH}	150	-	ns
Chip Select Setup Time	t_{CSS}	120	-	ns
Chip Select Hold Time	t_{CSH}	60	-	ns
Write Data Setup Time	t_{DSW}	50	-	ns
Write Data Hold Time	t_{DHW}	15	-	ns
Serial Clock Low Time	t_{CLKL}	100	-	ns
Serial Clock High Time	t_{CLKH}	100	-	ns
Rise Time	t_R	-	15	ns
Fall Time	t_F	-	15	ns

* VDD~VSS = 2.4 to 3.5V, Ta=25°C

Product No.	DD-6448BE-2A	REV. A
		REV.

5 APPLICATION NOTES

5.1 COMMANDS

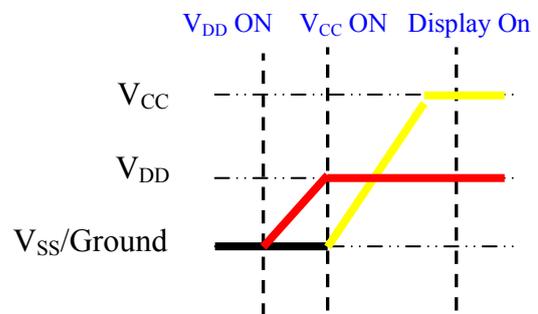

Please refer to the Technical Manual for the SSD1303.

5.2 POWER UP/DOWN SEQUENCE

To protect panel and extend the panel life time, the driver IC power up/down routine should include a delay period between high voltage and low voltage power sources during turn on/off. It gives the panel enough time to complete the action of charge and discharge before/after the operation.

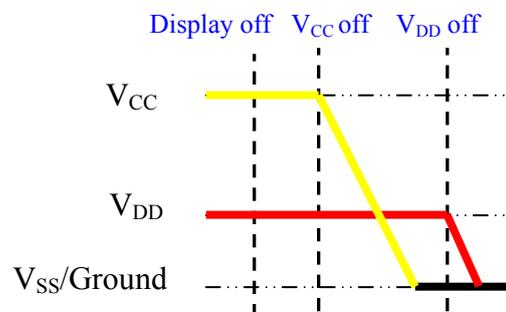

5.2.1 POWER UP SEQUENCE :

1. Power up V_{DD} & V_{DDIO}
2. Send Display off command
3. Clear screen
4. Power up V_{CC}
5. Delay 100ms
(When V_{DD} is stable)
6. Send Display on command

5.2.2 POWER DOWN SEQUENCE :

1. Send Display off command
2. Power down V_{CC}
3. Delay 100ms
(when V_{CC} is reach 0 and panel is completely discharges)
4. Power down V_{DD} & V_{DDIO}

5.3 RESET CIRCUIT

When RES# input is low, the chip is initialized with the following status:

1. Display is off
2. 64x48 Display Mode
3. Normal segment and display data column and row address mapping (SEG0 mapped to column address 00H and COM0 mapped to row address 00H)
4. Shift register data clear in serial interface
5. Display start line is set at display RAM address 0
6. Column address counter is set at 0
7. Normal scan direction of the COM outputs
8. Contrast control register is set at 80H
9. Normal display mode (Equivalent to A4h command)

Product No.	DD-6448BE-2A	REV. A
		REV.

7 QUALITY ASSURANCE SPECIFICATION

7.1 CONFORMITY

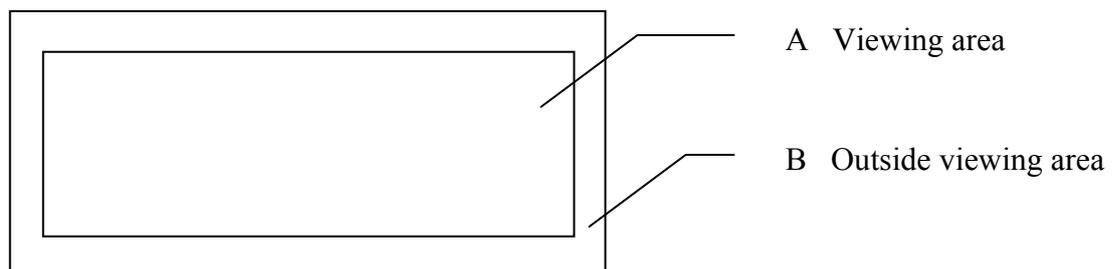

The performance, function and reliability of the shipped products conform to the Product Specification.

7.2 DELIVERY ASSURANCE

7.2.1 Delivery inspection standards

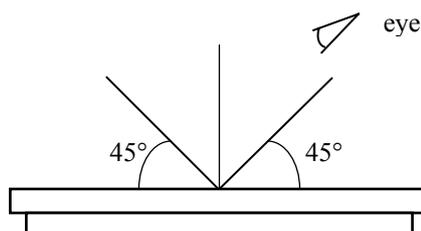

- IPC-AA610 class 2 electronic assemblies standard

7.2.2 Zone definition

7.2.3 Visual inspection

- Inspect under 30W fluorescent lamp leaving 50 cm between the module and the lamp and 30 cm between the module and the eye (measuring position).
- Appearance is inspected at the best contrast voltage (best contrast is adjusted considering clearness and crosstalk on screen).
- Inspect the module at 45° right and left, top and bottom.
- Use the optimum viewing angle during the contrast inspection.

7.3 DEALING WITH CUSTOMER COMPLAINTS

7.3.1 Non-conforming analysis

Purchaser should supply Densitron with detailed data of non-conforming sample.

After accepting it, Densitron should complete the analysis in two weeks from receiving the sample.

If the analysis cannot be completed on time, Densitron must inform the purchaser.

7.3.2 Handling of non-conforming displays

If any non-conforming displays are found during customer acceptance inspection which Densitron is clearly responsible for, return them to Densitron.

Both Densitron and customer should analyse the reason and discuss the handling of non-conforming displays when the reason is not clear.

Equally, both sides should discuss and come to agreement for issues pertaining to modification of Densitron quality assurance standard.

8 RELIABILITY SPECIFICATION

8.1 CONTENTS OF RELIABILITY TESTS

Test Item	Test Condition	Evaluation and assessment
High Temperature Operation	70°C±2, 240 hours	No abnormalities in function and appearance
Low Temperature Operation	-30°C±2, 240 hours	No abnormalities in function and appearance
High Temperature Storage	80°C±2, 240 hours	No abnormalities in function and appearance
Low Temperature Storage	-40°C±2, 240 hours	No abnormalities in function and appearance
High Temperature & High Humidity Storage	60°C±2, 90%RH, 240 hours	No abnormalities in function and appearance
Thermal Shock	24 cycle of -40°C 60 min, R.T. 5 min, 85°C 60 min	No abnormalities in function and appearance

- * The brightness should be greater than 50% of the initial brightness.
- * The samples used for the above tests do not include polarizer.
- * No moisture condensation is observed during tests.

8.2 LIFE TIME

Item	Description
1	Function, performance, appearance, etc. shall be free from remarkable deterioration more than 10,000 hours under ordinary operating and storage conditions of room temperature (25±10 °C), normal humidity (45±20% RH), and in area not exposed to direct sunlight.
2	End of lifetime is specified as 50% of initial brightness.
3	The storage period is warrantable of more than 20,000hr from the date of invoice under normal room conditions as stated below. Temperature: 23 ± 5°C. Humidity: 55 ± 15 %RH. In case of the seal of cartoon not opened

8.3 FAILURE CHECK STANDARD

After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at 23±5 °C ; 55±15% RH.

9 HANDLING PRECAUTIONS

Safety

If the panel breaks, be careful not to get the organic substance in your mouth or in your eyes.
If the organic substance touches your skin or clothes, wash it off immediately using soap and plenty of water.

Mounting and Design

Place a transparent plate (e.g. acrylic, polycarbonate or glass) on the display surface to protect the display from external pressure. Leave a small gap between the transparent plate and the display surface.

Design the system so that no input signal is given unless the power supply voltage is applied.

Caution during OLED cleaning

Lightly wipe the display surface with a soft cloth soaked with Isopropyl alcohol, Ethyl alcohol or Trichlorotrifluoroethane.

Do not wipe the display surface with dry or hard materials that will damage the polariser surface.

Do not use aromatic solvents (toluene and xylene), or ketonic solvents (ketone and acetone).

Caution against static charge

As the display uses C-MOS LSI drivers, connect any unused input terminal to V_{DD} or V_{SS} . Do not input any signals before power is turned on.

Also, ground your body, work/assembly table and assembly equipment to protect against static electricity.

Packaging

Displays use OLED elements, and must be treated as such. Avoid strong shock and drop from a height.

To prevent displays from degradation, do not operate or store them exposed directly to sunshine or high temperature/humidity.

Caution during operation

It is indispensable to drive the display within the specified voltage limit since excessive voltage shortens its life.

Other Precautions

When a display module is operated for a long of time with fixed pattern may remain as an after image or slight contrast deviation may occur.

Nonetheless, if the operation is interrupted and left unused for a while, normal state can be restored.

Also, there will be no problem in the reliability of the module.

Storage

Store the display in a dark place where the temperature is $25^{\circ}\text{C} \pm 10^{\circ}\text{C}$ and the humidity below 50%RH.

Store the display in a clean environment, free from dust, organic solvents and corrosive gases.

Do not crash, shake or jolt the display (including accessories).
