

Rust Not[®]

Superior metal protection
from the
spray paint specialists

RUST NOT[®] is more than true to its name, it is the finest metal protection spray paint available.

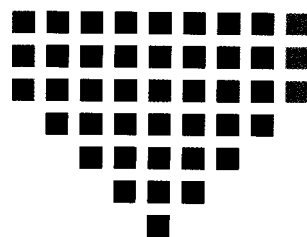

That's because Rust Not is formulated for maximum rust protection. Rust Not actually penetrates the surface to form a permanent bond. In a series of tests against other leading metal protection paints, Rust Not not only came out on top, but demonstrated that it protects three times as long. It can be used on most surfaces indoors or out. Its ability to withstand weathering makes it ideal for outdoor applications.

Rust Not does a lot more than just give outstanding rust and corrosion protection. It's also impact resistant and won't peel, flake or fade for years.

Rust Not top coats are manufactured to the most popular RAL colour references.

Rust Not paints dry quickly to an attractive smooth finish, and there's no need to wait before adding another coating. With Rust Not you can re-coat anytime.

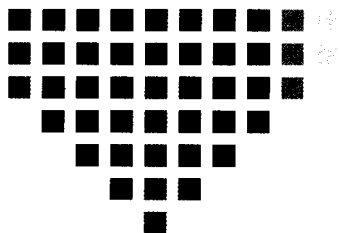

The formulation is non-toxic and completely safe for use in environmentally sensitive situations.

Proof of the Rust Not® metal protection superiority

THE SALT SPRAY CHAMBER TEST — An **X** was scratched into the paint film of each panel. The panels were then placed in a salt spray chamber and subjected to accelerated weather testing for 100 hours. This is comparable to being subjected to one-and-a-half-years of normal weather conditions.

Rust Not® colour-coat and Anti-Rust primers easily beat the competition. Proof that Rust Not rust resistance lasts three times longer.

RUST NOT PAINTS ARE TROUBLE FREE

***They resist chipping, peeling
and fading***

***Paints penetrate the surface to form a
permanent bond***

***Coatings dry quickly and can be
re-coated within minutes***

***All Rust Not products give a deep, rich
finish - either in rich gloss or attractive
satin finish***

***To assure colour consistency, all Rust Not
colours are computer matched***

***Available in extensive selection
of colours***

These identical steel panels were sprayed with one coat of Plasti-Kote Anti-Rust Primer and one coat of the leading competitive rust inhibiting primer. The competitive product rusted and flaked.

Special Note:
ASTM Standard Test Methods of salt spray were conducted by certified independent testing laboratories. Test results are available on request.
