

## Product Change Notification - SYST-03VQKT154

---

**Date:**

07 Apr 2020

**Product Category:**

8-bit Microcontrollers

**Affected CPNs:**

**Notification subject:**

ERRATA - PIC16(L)F18857/18877 Family Silicon Errata and Data Sheet Clarification Errata Document Revision

**Notification text:**

SYST-03VQKT154

Microchip has released a new Product Documents for the PIC16(L)F18857/18877 Family Silicon Errata and Data Sheet Clarification of devices. If you are using one of these devices please read the document located at [PIC16\(L\)F18857/18877 Family Silicon Errata and Data Sheet Clarification](#).

**Notification Status:** Final

**Description of Change:**

- 1.) Added Module 8 (Comparators).
- 2) Remove reference to A4

**Impacts to Data Sheet:** None

**Reason for Change:** To Improve Productivity

**Change Implementation Status:** Complete

**Estimated First Ship Date:** 07 Apr 2020

NOTE: Please be advised that after the estimated first ship date customers may receive pre and post change parts.

**Markings to Distinguish Revised from Unrevised Devices:** Traceability Code

**Attachment(s):**

[PIC16\(L\)F18857/18877 Family Silicon Errata and Data Sheet Clarification](#)

Please contact your local [Microchip sales office](#) with questions or concerns regarding this notification.

**Terms and Conditions:**

If you wish to receive Microchip PCNs via email please register for our PCN email service at our [PCN home page](#) select register then fill in the required fields. You will find instructions about registering for Microchips PCN email service in the [PCN FAQ](#) section.

If you wish to change your PCN profile, including opt out, please go to the [PCN home page](#) select login and sign into your myMicrochip account. Select a profile option from the left navigation bar and make the applicable selections.

## PIC16(L)F18857/18877 Family Silicon Errata and Data Sheet Clarification

The PIC16(L)F18857/18877 family devices that you have received conform functionally to the current Device Data Sheet (DS40001825D), except for the anomalies described in this document.

The silicon issues discussed in the following pages are for silicon revisions with the Device and Revision IDs listed in [Table 1](#). The silicon issues are summarized in [Table 2](#).

The errata described in this document will be addressed in future revisions of the PIC16(L)F18857/18877 silicon.

**Note:** This document summarizes all silicon errata issues from all revisions of silicon, previous as well as current. Only the issues indicated in the last column of [Table 2](#) apply to the current silicon revision (**A3**).

Data Sheet clarifications and corrections start on [page 5](#), following the discussion of silicon issues.

The silicon revision level can be identified using the current version of MPLAB® IDE and Microchip's programmers, debuggers, and emulation tools, which are available at the Microchip corporate website ([www.microchip.com](http://www.microchip.com)).

For example, to identify the silicon revision level using MPLAB IDE in conjunction with a hardware debugger:

1. Using the appropriate interface, connect the device to the hardware debugger.
2. Open an MPLAB IDE project.
3. Configure the MPLAB IDE project for the appropriate device and hardware debugger.
4. Based on the version of MPLAB IDE you are using, do one of the following:
  - a) For MPLAB IDE 8, select *Programmer > Reconnect*.
  - b) For MPLAB X IDE, select *Window > Dashboard* and click the **Refresh Debug Tool Status** icon (  ).
5. Depending on the development tool used, the part number *and* Device Revision ID value appear in the **Output** window.

**Note:** If you are unable to extract the silicon revision level, please contact your local Microchip sales office for assistance.

The DEVREV values for the various PIC16(L)F18857/18877 silicon revisions are shown in [Table 1](#).

**TABLE 1: SILICON DEVREV VALUES**

| Part Number  | Device ID <sup>(1)</sup> | Revision ID (Silicon Revision) <sup>(2)</sup> |       |
|--------------|--------------------------|---|-------|
|              |                          | A2  | A3    |
| PIC16F18857  | 3074h                    | 2002h   | 2003h |
| PIC16LF18857 | 3076h                    | 2002h   | 2003h |
| PIC16F18877  | 3075h                    | 2002h   | 2003h |
| PIC16LF18877 | 3077h                    | 2002h   | 2003h |

**Note 1:** The Revision ID and Device ID are located in the Configuration memory at addresses 8005h and 8006h, respectively.

**2:** Refer to the “PIC16(L)F188XX Memory Programming Specification” (DS40001753) for detailed information on Device and Revision IDs for your specific device.

# PIC16(L)F18857/18877

**TABLE 2: SILICON ISSUE SUMMARY**

| Module  | Feature                                | Item No. | Issue Summary  | Affected Revision <sup>(1)</sup> |    |
|---|--|----------|--|----------------------------------|----|
|   |  |          |  | A2                               | A3 |
| Analog-to-Digital Converter with Computation (ADC2) | Computation Overflow Bit               | 1.1      | The Computation Overflow bit will be erroneously set by the ADFLTR.                                      | X                                |    |
| Analog-to-Digital Converter with Computation (ADC2) | ADC Conversion                         | 1.2      | When using ADCRC as the ADCC clock source there is a delay of one instruction cycle to set the ADGO bit. | X                                |    |
| Analog-to-Digital Converter with Computation (ADC2) | Positive Voltage Reference             | 1.3      | Using the FVR as the ADC positive voltage reference can cause missing codes.                             | X                                | X  |
| Nonvolatile Memory Control                          | NVMREG Access                          | 2.1      | Self-writes on LF devices below 2.2V at -40°C may not work.  | X                                |    |
| EEPROM  | Indirect Read                          | 3.1      | Indirect read of EEPROM with FSR returns unexpected value.   | X                                |    |
| ECCP  | Compare Mode                           | 4.1      | Toggle mode may output multiple pulses when source clock has a prescaler other than 1:1.                 | X                                |    |
| MSSP  | I <sup>2</sup> C communication         | 5.1      | Acknowledge failure on LF devices only.  | X                                |    |
| Electrical Specifications                           | Fixed Voltage Reference (FVR) Accuracy | 6.1      | Fixed Voltage Reference (FVR) output tolerance may be higher than specified at temperatures below -20°C. | X                                |    |
| Secondary Oscillator (SOSC)                         | Low-Power Mode                         | 7.1      | SOSC may not properly operate in Low-Power mode at low temperatures.                                     | X                                |    |
| Comparators   | Offset Voltage                         | 8.1      | Comparator Input Offset value is higher than specified.  | X                                | X  |

**Note 1:** Only those issues indicated in the last column apply to the current silicon revision.

## Silicon Errata Issues

**Note:** This document summarizes all silicon errata issues from all revisions of silicon, previous as well as current. Only the issues indicated by the shaded column in the following tables apply to the current silicon revision (**A3**).

### 1. Module: Analog-to-Digital Converter with Computation (ADC<sup>2</sup>)

#### 1.1 Computation Overflow Bit

If the sign bit of ADFLTR (bit 7 of ADFLTRH) is set, the Computation Overflow bit will also be set, even though this is not a legitimate case of an overflow occurring.

##### Work around

None.

##### Affected Silicon Revisions

| A2 | A3 |  |  |  |  |  |  |
|----|----|--|--|--|--|--|--|
| X  |    |  |  |  |  |  |  |

#### 1.2. ADC Conversion

When using ADCRC as the clock source for ADCC, there is a delay of one instruction cycle between the user setting the ADGO bit and being able to read it set. This can lead to a false conversion complete scenario (i.e., ADGO being cleared), depending if the user code has a bit clear test (BTFSC) instruction on the ADGO bit, immediately after setting the ADGO bit. See code example below.

e.g.

```
BSF ADCON0, ADGO ; Start conversion
BTFSC ADCON0, ADGO ; Is conversion done?
GOTO $-1 ; No, test again
```

The BTFSC will pass the very first time in this situation.

##### Work around

Add a NOP instruction after setting the ADGO bit and before testing the bit for completion of conversion. See code example below.

e.g.

```
BSF ADCON0, ADGO ; Start conversion
NOP
BTFSC ADCON0, ADGO ; Is conversion done?
GOTO $-1 ; No, test again
```

##### Affected Silicon Revisions

| A2 | A3 |  |  |  |  |  |  |
|----|----|--|--|--|--|--|--|
| X  |    |  |  |  |  |  |  |

### 1.3 Positive Voltage Reference

Using the FVR as the positive voltage reference for the ADC can cause an increase in missing codes.

##### Work around

Increase the bit conversion time (TAD) to 8 us or higher.

##### Affected Silicon Revisions

| A2 | A3 |  |  |  |  |  |  |
|----|----|--|--|--|--|--|--|
| X  | X  |  |  |  |  |  |  |

### 2. Module: Nonvolatile Memory Control

#### 2.1 NVMREG Access

When performing self-writes through NVMREG access on PIC16LF18857/18877 devices with VDD below 2.2V and at temperature of -40°C, the writes may not work. This applies to both PFM and EEPROM writes.

##### Work around

None.

##### Affected Silicon Revisions

| A2 | A3 |  |  |  |  |  |  |
|----|----|--|--|--|--|--|--|
| X  |    |  |  |  |  |  |  |

### 3. Module: EEPROM

#### 3.1 Indirect Read

Performing FSR reads of Data EEPROM addresses other than the lowest address (FSR = 7000h) will return unexpected values.

##### Work around

Set NVMADRH:L to the desired address (F000h through F0FFh) and retrieve the EEPROM value from the NVMDATL register by setting the NVMREGS and RD bits in the NVMCON1 register.

##### Affected Silicon Revisions

| A2 | A3 |  |  |  |  |  |  |
|----|----|--|--|--|--|--|--|
| X  |    |  |  |  |  |  |  |

## 4. Module: ECCP

### 4.1 Compare Mode

The ECCP Compare Toggle modes (CCPxCON<3:0> bits = 0010 or 0001) output multiple pulses instead of a single toggle pulse when its source clock has a prescaler other than 1:1.

#### Work around

Use CCP Compare mode with pulse output (CCPxCON<3:0> bits = 1011) to clock a CL.

#### Affected Silicon Revisions

| A2 | A3 |  |  |  |  |  |  |
|----|----|--|--|--|--|--|--|
| X  |    |  |  |  |  |  |  |

## 5. Module: MSSP

### 5.1 I<sup>2</sup>C Communication

When using the MSSP to perform I<sup>2</sup>C communication on LF devices and the voltage for VDD is above 3.0 volts, the Acknowledge signal (ACK) does not always occur after the second address byte is received, as expected. This issue exhibits itself when the MSSP is configured either for 7-bit or 10-bit addressing and in either Master or Slave mode.

The issue occurs more frequently when using 10-bit addressing in Slave mode and the lower address bits (A7-A0) are transmitted by the Master on the SDA line.

#### Work around

Do not exceed 3.0 volts on VDD when using an LF device in this manner.

#### Affected Silicon Revisions

| A2 | A3 |  |  |  |  |  |  |
|----|----|--|--|--|--|--|--|
| X  |    |  |  |  |  |  |  |

## 6. Module: Electrical Specifications

### 6.1 Fixed Voltage Reference (FVR) Accuracy

At temperatures below -20°C, the output voltage for the FVR may be greater than the levels specified in the data sheet. This will apply to all three gain amplifier settings (1X, 2X, 4X). The affected parameter numbers found in the data sheet are: FVR01, (1X gain setting), FVR02 (2X gain setting), and FVR03 (4X gain setting).

#### Work around

At temperatures above -20°C, the stated tolerances in the data sheet remain in effect. Operate the FVR only at temperatures above -20°C.

#### Affected Silicon Revisions

| A2 | A3 |  |  |  |  |  |  |
|----|----|--|--|--|--|--|--|
| X  |    |  |  |  |  |  |  |

## 7. Module: Secondary Oscillator (SOSC)

### 7.1 Low-Power Mode

While operating the device at low temperatures and using the SOSC in Low-Power mode (OSCCON3<6> = 0), the SOSC might fail to operate as expected.

#### Work around

If SOSC functionality is required at low temperatures, configure the SOSC for high-power operation (OSCCON3<6> = 1).

#### Affected Silicon Revisions

| A2 | A3 |  |  |  |  |  |  |
|----|----|--|--|--|--|--|--|
| X  |    |  |  |  |  |  |  |

## 8. Module: Comparators

### 8.1 Offset Voltage

The maximum value of the input offset voltage for the comparators is increasing from ±30 mV to ±60 mV.

The parameter in the data sheet is CM01, also known as V<sub>IOFF</sub>.

#### Work around

None.

#### Affected Silicon Revisions

| A2 | A3 |  |  |  |  |  |  |
|----|----|--|--|--|--|--|--|
| X  | X  |  |  |  |  |  |  |

## Data Sheet Clarifications

The following typographic corrections and clarifications are to be noted for the latest version of the device data sheet (DS40001825D):

|   |
|---|
| <p><b>Note:</b> Corrections are shown in <b>bold</b>. Where possible, the original bold text formatting has been removed for clarity.</p> |
|---|

None.

## APPENDIX A: DOCUMENT REVISION HISTORY

### **Rev G Document (4/2020)**

Added Module 8 (Comparators). Remove reference to A4.

### **Rev F Document (1/2020)**

Added Rev A4 to document.

### **Rev E Document (4/2018)**

Added Rev A3 to document.

### **Rev D Document (2/2018)**

Added Module 7: Secondary Oscillator (SOSC).

### **Rev C Document (7/2017)**

Added Modules 1.3 (PVR), 5 (MSSP) and 6 (Electrical Specifications).

#### **Data Sheet Clarifications:**

Removed all modules, data sheet updated.

### **Rev B Document (9/2016)**

Modifications brought to [Table 2](#).

#### **Silicon Errata Issues:**

Added ADC Conversion feature to [Analog-to-Digital Converter with Computation \(ADC2\)](#); Added [EEPROM](#) and [ECCP](#) modules.

#### **Data Sheet Clarifications:**

Added modules 9 to 15.

### **Rev A Document (6/2016)**

Initial release of this document.

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
