

# Flow Sens Test Kit

## Evaluation Kit for the FS1-Flow Sensor Family

### Product

The Flow Sens Test Kit helps our customers to enter into the flow measuring technology for our flow sensors. It allows an immediate start for tests without any effort for electronic development.

An analogue output allows quick tests in the lab, because just a voltmeter is needed for the first measurements.

In combination with the provided software, the serial interface (RS232) allows a comfortable display and storage of the measured data on a computer.

The Test Kit is usable for gas flows (FS1 / FS1A) or for liquid flows (FS1L / FS1LA) after a adequate configuration at IST.

### Components

- 4 Sensors: 2 FS1 and 2 FS1A  
or  
2 FS1L and 2 FS1LA
- Electronic (housing 80x80x35mm)
- Cable RS232
- Power supply unit 15V
- Software (CD)

### Prices

CHF	440.-
Euro	295.-
US \$	350.
