1. Temperature range 0°C to +40°C ambient.
2. Pressure up to 2 bar.
3. Fluid is a difficult point on which to be definitive. Common, aqueous cleaning chemicals and detergents will be fine with the tube provided. However, fluids such as solvents are known to attack tubes within peristaltic pumps and special pump tubes can be sourced.

We have compatibility charts should you have further information on what type of chemical is being pumped.
