SEPA[®] CPU-COOLER

HF500B50A05, HF500B50A05A, HF500B50A12, HF500B50C12A

COOLING of HIGH-SPEED CPUs

• FEATURES

Small and light. The ball-bearing fan on the heat sink is highly effective despite its height of only 24.5mm! This renders it highly suitable for high speed CPU's.

• VERY LOW POWER CONSUMPTION

An $NdFe_2O_3$ magnet ensures a high torque of the ball bearing fan motor and maximum conductance of heat and simultaneous low current consumption.

• HIGHEST RELIABELITY AND LIFE EXPECTANCY

The brushless motor is electronically commutated. A special IC is responsible for the electrical control. High reliability is achieved by 100% burn-in.

SILENT

The air flow performance is increased and the noise reduced by computer-aided optimisation of the impeller and cooling surfaces.

• ATTACHMENT

With a metal-clamping bracket for PGA-Socket Nr. 5, Nr. 7 or A (to be supplied).

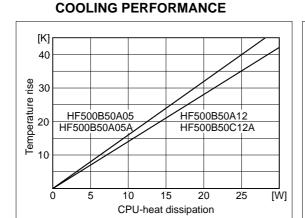

• ALARM-OUTPUT

An optional speed impulse output enables simple monitoring of the fan speed.

PERFORMANCE

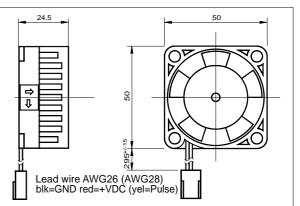

Туре	Operating	Operating	Thermal	Noise	Op. Tempera-	Life Exp. / MTBF
	Voltage	Current	Resist.	[dB(A)]	ture (heat	
	[VDC]	[mA]	[K/W] *)	**)	sink) °C	[h @ 60°C]
HF500B50A05(A)	4.5 <u>5</u> 5.5	210/150	1.6	24	-10 +80	75000 / 210000
HF500B50A(C)12(A)	10.2 <u>12</u> 13.8	140/90	1.4	31	-10 +80	75000 / 210000

SHAPE AND DIMENSION

**) Measured at 1m from the air intake side

SEPA EUROPE GmbH 52.04 D-79108 FREIBURG

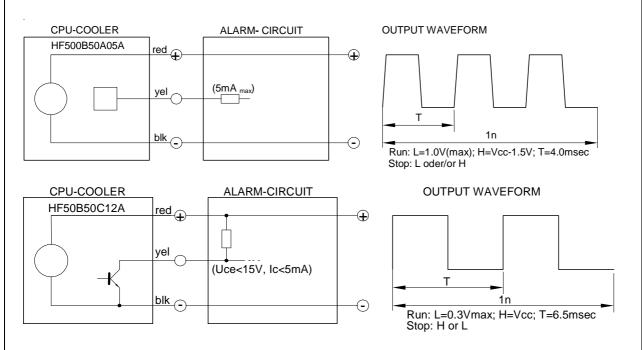

• ALARM SIGNAL (Option ...A)

The **SEPA**[®] HF500B50xxxA includes a speed impulse output, which enables monitoring the correct function of the fan. An alarm-board is available on request.

The pulse is like a rectangular wave. At blocked rotor the output signal could be L or H. HF500B50A05A: Pulse frequency correlates to 3 x rotor speed, line-output, a pull-up-resistor is not needed. HF500B50C12A: Pulse frequency correlates to 2 x rotor speed, OC-output, a pull-up-resistor is needed.

<u>IMPORTANT</u>: The pulse output is *not* protected against short circuit and must not connect to GND or Vcc without series-resistor. Do not connect not used pulse output to GND or Vcc (insolate).

• ACCESSORIES:

THPAD44thermally conductive adhesive pad, with aluminium carrier.ALG01SEPA ALARM, monitor-circuit, generates an acoustic signal in case of missing pulses.VARP01Speed control via temperatureCONNECTORon request

• ATTACHEMENT:

The HF500B50xxx(A) will be fixed with a included metal-clamping bracket for PGA-Socket Nr. 5, Nr. 7 or A. A thermal conductive pad or (better) a little thermal conductive grease between CPU und CPU-Cooler is needed to get best cooling performance. By using thermal conductive grease in place of thermal conductive pad the thermal resistance will be reduced by 0.25K/W.

The HF500B50xxx(A) has tinned lead wire ends (without connector).

• ELECTRICAL PROTECTION:

The HF500B50Axx(A) is permanent protected against false pole of power supply and blocking rotor.

• ORDER INFORMATION:

HF500B50A05	CPU-Cooler 200, CE	215011000
HF500B50A05A	CPU-Cooler 200, impulse, CE	215011010
HF500B50A12	CPU-Cooler 200, CE	215012000
HF500B50C12A	CPU-Cooler 200, impulse, CE	215032010

SEPA® is the brand name for fans and CPU Cooler, made by Nippon Keiki Works LTD., Tokyo
