

MPN - DEMOSENSE2GOLMAKETOBO1

DEMO SENSE2GOL MAKE

Accurately measures motion, speed and direction:

- Using frequency shifts caused by the Doppler effect, sense2gol is able to accurately track the velocity of objects, detect motion and determine the direction of movement.
- It is highly sensitive and doesn't even miss the tiniest movements. You can use it for all kinds of applications.

Sees through objects:

- Radar sees more than other sensors. But on top of that, sense2gol can even see through objects.

Flexible and robust:

- Due to its tiny form factor and its excellent sensor quality, sense2gol can be used in any thinkable application.
There are no restraints on the environment or your setting, the Sense2GoL just does the job for you!

Brings to you the future of sensing:

- Now, you're able to make use of the most promising sensing technology for IoT, Industry 4.0 and other future topics!
