

Dear Sir or Madam,

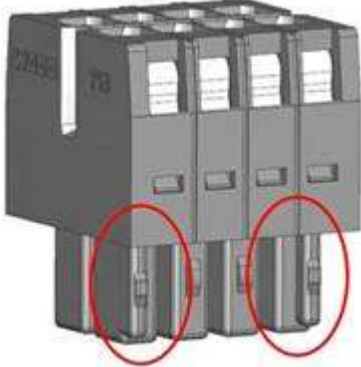

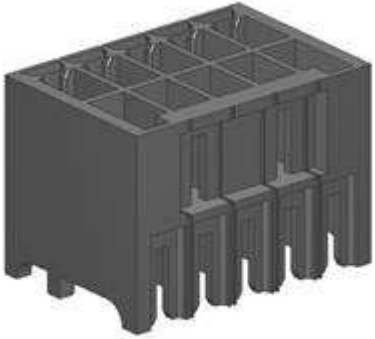

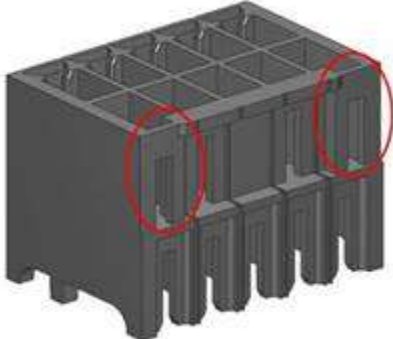

We would like to inform you about the following product changes of our **PCB Connectors 713 Series**

1. Change Reason
2. Geometry change
3. Change of item numbers
4. Technical data and certifications
5. Changeover schedule

1. Change Reason

With this change we improve the handling of the connector. The customer benefit is increased by optimizing the insertion and release forces of the pole numbers 2x3 to 2x5, while the insertion and release forces maintain the current level for higher pole numbers. This ensures a consistently easy handling of the 713 Series connector family.

2. Geometry changes

	Current Version	New Version
Female Connector (The geometry change affects all pole numbers)		
Male Header (The geometry change only affects the number of poles 2x3 to 2x5)		

3. Change of item numbers

The item numbers stay the same. The affected item numbers are attached. In the beginning, delivery of old and new items is possible. Each packaging unit includes uniform variants.

4. Technical data and certifications

The overall dimensions and technical data of the new versions are identical to the current versions. UL and EN/IEC certification data are identical and certifications remain valid.

5. Changeover schedule

The changeover is scheduled for the next 6 months and will be executed without further notice.

With Best Regards,

WAGO Limited
