

INTRODUCTION

Meet Mr. NEON, the light chaser beam robot that can help kids or novice electronic enthusiasts learn about things like soldering and simple knowledge of circuit. Mr NEON is designed to look like a three-leg monster whose eyes or tentacles glow in accordance with ambient light level. The stronger the light is, the faster it moves. There is no programming involved and all soldering is intuitive and rookie-friendly. So it is perfect for novice electronic enthusiast. Also you can give Mr NEON different face through changing the expression stickers.

An apology: An apology: There is an error with images in the current edition of the instruction booklet. DFRobot would like to issue a sincere apology for this error and will ensure that it is fixed in the next publication of these instructions.
